Use code TO in conjunction with the appropriate 2/N101/050 code to indicate the organization to receive the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Required	Segment: QTY Quantity				
	Level: Detail				
	Loop: QTY Repeat: >1				
	Usage: Optional				
	Max Use: 1				
Mandatory	Purpose: To specify quantity information.				
	Implementation Notes:				
	1. Use the 2/QTY/110 loop to identify the quantity of material obtained locally and provide additional descriptive information about the material.				
	2. Use only one iteration of the 2/QTY/110 loop for each iteration of the 2/PTD/010 loop.				
	Data Element Summary				
Mandatory	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
	QTY01	673	Quantity Qualifier	M	ID 2/2
	Code specifying the type of quantity.				
	Implementation Note:				
	To reverse all or part of a demand transaction, use a minus sign in front of the quantity being reversed (see data element type discussion in volume 1, chapter 10).				
Mandatory	YA Total Demand Quantity				
	QTY02	380	Quantity	M	R 1/15
	Numeric value of quantity.				
	Implementation Note:				
	Express as a whole number with no decimals. For example, if the quantity obtained is 20, cite only 20.				
Optional	QTY03	355	Unit or Basis for Measurement Code	O	ID 2/2
	Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken				
	Implementation Note:				
	Use to identify the unit of issue for nonstandard material only. (See the unit of issue conversion table in volume 1, chapter 10.)				

Optional

Segment: LIN Item Identification

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

Syntax:

1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

Comments:

1. See the Data Dictionary for a complete list of ID's.
2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use to provide a detailed description of the nonstandard material only, identified in 2/REF/030. Use with the 2/PID/150, 2/MEA/160, 2/REF/190, and 2/DTM/210 segments, and the 2/NI/050 loop to fully identify the material. Do not use with reversals.

2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Not Used	LIN01	350	Assigned Identification	O AN 1/11
Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M ID 2/2
			A3 Locally Assigned Control Number Code Value Implementation Note: <i>Use as needed to identify the locally assigned number under which the nonstandard material is managed.</i>	
			AB Assembly Code Value Implementation Note: <i>Use to identify the assembly associated with the material.</i>	
			CL Color	
			CN Commodity Name Code Value Implementation Note: <i>Use as needed to identify the nomenclature of the nonstandard material</i>	
			DR Drawing Revision Number	
			EM Equipment Identification Number Code Value Implementation Note: <i>Use to identify the equipment identification code of the material.</i>	
			EQ Equipment Type Code Value Implementation Note: <i>Use as needed to identify the type equipment code associated with the material.</i>	
			F1 Catalog Number Code Value Implementation Note: <i>Use as needed to identify the manufacturer's catalog which references the nonstandard material. Cite the effective catalog publication date, if applicable, in the 2/DTM/210 segment.</i>	
			F2 Technical Order Number	
			F3 Technical Manual Number	
			F4 Series Identifier Code Value Implementation Note: <i>Use as needed to cite the manufacturer's series number of the nonstandard material.</i>	
			GS General Specification Number Code Value Implementation Note: <i>Use as needed to indicate a specification number, other than a MILSPEC, associated with the nonstandard material.</i>	
			MF Manufacturer Code Value Implementation Note: <i>Use as needed to identify the nonstandard material manufacturer's name.</i>	
			MN Model Number Code Value Implementation Note: <i>Use as needed to cite the manufacturer's model number of nonstandard material.</i>	
			MS Military Specification (MILSPEC) Number	
			PR Process Number	

Code Value Implementation Note:

Use as needed to cite a general operating specification which cannot be identified by use of the 2/MEA/160 segment. For example, the MEA use is primarily to identify physical sizes and dimensions of nonstandard material. Code PR use is to indicate specifications similar to output rated wattage and horsepower.

PT Print or Drawing

Code Value Implementation Note:

Use as needed to cite the applicable drawing numbers for the nonstandard material.

PW Part Drawing

Code Value Implementation Note:

Use as needed to cite the applicable figure numbers for the nonstandard material.

SN Serial Number

Code Value Implementation Note:

Use as needed to identify manufacturer's serial numbers assigned to the material.

W2 Work Unit Number

Code Value Implementation Note:

Use to identify the work unit code of the material.

YP Publication Number

Code Value Implementation Note:

Use as needed to identify publication or catalog reference numbers.

Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40

Recom. Segment: **AMT Monetary Amount**
Level: Detail
Loop: QTY
Usage: Optional
Max Use: 12
Purpose: To indicate the total monetary amount.

Implementation Note:

Use as needed to identify the price or cost of material provided from a local source, other than inventory.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	AMT01	522	Amount Qualifier Code Code to qualify amount	M	ID	1/2
	Implementation Note: Use only one of codes 29, L, or OP to identify the cost of the material.					
			29 Estimated Price			
			Code Value Implementation Note: Use to identify the estimated unit cost when the material is manufactured or fabricated.			
			L Local			
			Code Value Implementation Note: Use to identify the unit purchase price.			
			OP Original Payment Total			
			Code Value Implementation Note: Use to identify the unit price originally paid for the material when it is replaced under warranty at no cost.			
Mandatory	AMT02	782	Monetary Amount Monetary amount.	M	R	1/15
	Implementation Note: Value must be expressed in U.S. currency, i.e., in dollars and cents with a decimal included.					
Not Used	AMT03	478	Credit/Debit Flag Code	O	ID	1/1

Optional

Segment: PID Product/Item Description

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 200

Purpose: To describe a product or process in coded or free-form format

Syntax: 1. C0403 — If PID04 is present, then PID03 is required.

2. R0405 — At least one of PID04 or PID05 is required.

3. C0703 — If PID07 is present, then PID03 is required.

4. C0803 — If PID08 is present, then PID03 is required.

Semantic: 1. Use PID03 to indicate the organization that publishes the code list being referred to.

2. PID04 should be used for industry-specific product description codes.

3. PID08 describes the physical characteristics of the product identified in PID04. A "Y" indicates that the specified attribute applies to this item. A "N" indicates it does not apply. Any other value is indeterminate.

Comments: 1. If PID01 = "F", then PID05 is used. If PID01 = "S", then PID04 is used. If PID01 = "X", then both PID04 and PID05 are used.

2. Use PID06 when necessary to refer to the product surface or layer being described in the segment.

3. PID07 specifies the individual code list of the agency specified in PID03.

Implementation Note:

Use as needed to describe nonstandard material only when 2/LIN/120, 2/MEA/160, and 2/REF/190 do not provide adequate descriptive capability. Use multiple repetitions as needed to provide the narrative descriptive information. Do not use with reversals.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	PID01	349	Item Description Type Code indicating the format of a description. F Free-form	M	ID	1/1
Not Used	PID02	750	Product/Process Characteristic Code	O	ID	2/3
Not Used	PID03	559	Agency Qualifier Code	C	ID	2/2
Not Used	PID04	751	Product Description Code	C	AN	1/12
Required	PID05	352	Description A free-form description to clarify the related data elements and their content.	C	AN	1/80
Not Used	PID06	752	Surface/Layer/Position Code	O	ID	2/2
Not Used	PID07	822	Source Subqualifier	O	AN	1/15
Not Used	PID08	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: MEA Measurements

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 40

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances, and weights

(See Figures Appendix for example of use of C001.)

Syntax: 1. R03050608 — At least one of MEA03, MEA05, MEA06 or MEA08 is required.

2. C0504 — If MEA05 is present, then MEA04 is required.

3. C0604 — If MEA06 is present, then MEA04 is required.

4. L07030506 — If MEA07 is present, then at least one of MEA03, MEA05 or MEA06 are required.

5. E0803 — Only one of MEA08 or MEA03 may be present.

Semantic: MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

Comment: When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed use MEA05 as the negative (-) value and MEA06 as the positive (+) value.

Implementation Notes:

1. Use multiple repetitions to identify any measurement/dimensions related to nonstandard material only. Do not use with reversals.

2. Must use MEA02, MEA03, and MEA04.

Data Element Summary

Not Used

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
MEA01	737	Measurement Reference ID Code	O	ID	2/2
MEA02	738	Measurement Qualifier	O	ID	1/3
		Code identifying a specific product or process characteristic to which a measurement applies			

Implementation Note:

Use to identify the specific dimension/measurement quantified in MEA03 and MEA04.

Optional

Segment: REF Reference Numbers**Level:** Detail**Loop:** QTY**Usage:** Optional**Max Use:** >1**Purpose:** To specify identifying numbers.**Syntax:** R0203 — At least one of REF02 or REF03 is required.**Implementation Note:***Use multiple repetitions as needed to fully describe the material. Do not use with reversals.***Data Element Summary**

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

Implementation Note:*When citing the manufacturer's part number (code MF), always use code W7 to identify the manufacturer's CAGE.***BB** Authorization Number**Code Value Implementation Note:***Use to identify an allowance list or authorization document that justifies the need for the material.***IQ** End Item**Code Value Implementation Note:***Use to identify the end item which applies to the material. Description may include the NSN and/or nomenclature.***MF** Manufacturers Part Number**Code Value Implementation Note:***Use as needed to identify the manufacturer's part number for nonstandard material actually obtained locally.***QQ** Unit Number**Code Value Implementation Note:***Use to identify the piece number of the material.***W7** Commercial and Government Entity (CAGE) Code**Code Value Implementation Note:***Use only with code MF to identify the manufacturer's part number.*

Conditional

REF02	127	Reference Number	C	AN	1/30
Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.					

Conditional

REF03	352	Description	C	AN	1/80
A free-form description to clarify the related data elements and their content.					

Implementation Note:*Use only with code CU as needed to indicate the nomenclature of the end item.*

Segment: **DTM** Date/Time Reference

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use multiple repetitions as needed to define the dates associated with the demand requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
			035 Delivered			
			Code Value Implementation Note: Use to identify the date that material was actually obtained or delivered.			
			043 Publication			
			Code Value Implementation Note: Use as needed for nonstandard material to identify the manufacturer's catalog publication date when a catalog is identified in 2/LIN/120.			
			102 Issue			
Required			Code Value Implementation Note: Use as needed for nonstandard material to identify the effective date of the drawing number (when only using code PT) or the drawing revision number (when using code DR with code PT) identified in the 2/LIN/120 segment.			
			512 Warranty Expiration			
			Code Value Implementation Note: Use as needed to identify the warranty expiration date when material requirement is satisfied by warranty replacement.			
	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
	DTM03	337	Time	C	TM	4/8
	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Optional

Segment: DD Demand Detail**Level:** Detail**Loop:** QTY**Usage:** Optional**Max Use:** 1**Purpose:** To describe the type of demand and the intended use of material

- Syntax:**
1. C0201 — If DD02 is present, then DD01 is required.
 2. P03040507 — If either DD03, DD04, DD05 or DD07 are present, then the others are required.
 3. C0605 — If DD06 is present, then DD05 is required.
 4. C1009 — If DD10 is present, then DD09 is required.

Semantic: DD08 transmits the stock level indicator. "Y" indicates that the material is normally carried in stock. "N" indicates that the material is not normally stocked

Implementation Notes:

1. Use to identify the weapon system to which the material applies. Only one weapon system may be identified for the quantity of material cited in 2/QTY/110. Do not use with reversals.
2. DD05 is always understood to be the DLMS Service/Agency Code. (See Volume 1, Chapter 10, Appendix 10G, DLMS code list value 71.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

			W2 Weapon System Number			
			Code Value Implementation Note: Use to identify the applicable weapon system designator code.			
Required	DD04	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Required	DD05	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20
			Implementation Note: Use only to identify the Service associated with the weapon system for which this demand is reported.			
Not Used	DD06	1270	Code List Qualifier Code	O	ID	1/3
Required	DD07	380	Quantity Numeric value of quantity.	C	R	1/15

Implementation Note:

Use only to identify the quantity associated with the weapon system. Express as a whole number with no decimal. For example, if the quantity is 20, cite only 20.

Not Used	DD08	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	DD09	1271	Industry Code	C	AN	1/20
Not Used	DD10	1270	Code List Qualifier Code	O	ID	1/3

Required

Segment: LDT Lead Time**Level:** Detail**Loop:** QTY**Usage:** Optional**Max Use:** 1**Purpose:** To specify lead time for availability of products and services.**Semantic:** LDT04 is the effective date of lead time information.**Comment:** LDT02 is the quantity of Unit of Time Periods.**Implementation Note:***Use to identify procurement lead times for the item of supply.***Data Element Summary**

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LDT01	345	Lead Time Code Code indicating the time range. AE From date of PO receipt to shipment. Code Value Implementation Note: <i>Use to indicate the procurement lead time defined as the time between receipt of purchase or work order and product ready.</i>	M	ID	2/2
Mandatory	LDT02	380	Quantity Numeric value of quantity. Implementation Note: <i>Use to identify the numeric value of procurement lead time days. Express as a whole number with no decimal. For example if the number of days is 20, cite only 20.</i>	M	R	1/15
Mandatory	LDT03	344	Unit of Time Period or Interval Code indicating the time period or interval DY Day	M	ID	2/2
Not Used	LDT04	373	Date	O	DT	6/6

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Use of the 2/LM/260 loop is required if not using the 1/LM/140 loop.

2. For any specific table 2 iteration use this 2/LM/260 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/140 loop or 2) to identify a DoD code when LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/140 loop with a different DoD code in the 2/LM/260 loop when the same LQ01 qualifier is used in both loops but the LQ02 DoD code is different. (Codes subject to override: 74, 79, and EN.)

Required

LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20
------	------	--	---	----	------

Mandatory

Segment: SE Transaction Set Trailer

Level: Summary

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10

Mandatory

SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9
------	-----	--	----------

12

MATERIAL RETURNS AND REDISTRIBUTION OF ASSETS

12.1

GENERAL

This chapter provides procedures for the offering of material no longer needed and the redistribution of the assets. These procedures also establish the necessary controls to ensure timely processing of related transactions and provide for the automatic return of material under specified conditions.

The DoD 4140.1-R contains the policy regarding the reporting of assets, the transfer of assets, and the redistribution of assets.

Credit for material returns is granted on the basis of receipt and classification by the consignee. Procedures for the time frames and transactions for providing credit for material returns and redistribution is contained in Volume 7.

12.2

APPLICABILITY AND SCOPE

The provisions of this chapter are applicable to all organizations offering or returning material to a Service ICP, DoD IMM, or the GSA. These provisions also apply to organizations receiving and processing MROs directing redistribution and shipment of material from a post, camp, station, or base to another similar organization to satisfy a specific demand. DoD 5105.38-M contains the policy regarding utilization and redistribution of SA material. These procedures also apply to the processing of nonconsumable items.

12.3

EXCLUSIONS

Items not identified by an NSN or part number are excluded from these procedures on an inter-S/A basis.

Perishable subsistence items.

IPE identified only by a plant equipment code/manufacturers' part number. These items will be reported to DGSC-JH (DoDAAC SE4300) on DD Form 1342, DoD Property Record.

Class V (W) ground (surface) ammunition.

Lumber products (with the exception of lumber product items stocked by GSA).

Items under DNA management; such as, FSG 11 and all DOE special design and quality controlled items (identified by CAGE 87991 in the DLSC master item file) and all DoD items designed specifically for use on or with nuclear weapons (identified by CAGE 57991, 67991, or 77991 in the DLSC master item file). (Use the DOE-DNA TP 100-1, et al., to process these items.)

Excess ADPE under DoD 4160.21-M.

Excess bulk petroleum and coal under DoD 4140.25-M.

12.4

PREPARATION OF OFFER OF MATERIAL REPORTS

Use the TS 180 IC - Material Returns Reporting (appendix 12A) to offer or report material no longer needed.

Cite Advice Code 3R when offering material below retention levels.

SICA reporting organizations generate TS 180 IC - Material Returns Reporting for serviceable NIMSC 5 items to the appropriate Service SICA under Service implementing instructions. The SICA will identify quantities not required to the PICA, using the reporting organization's TS 180 IC - Material Returns Reporting transaction number, and citing their (SICA) treasury symbol number. If appropriate, the SICA will provide TR status to the reporting organization for the quantity referred to the PICA, under section 12.12. The date in the TR status, if used, will be 35 days subsequent to the date the TS 180 IC - Material Returns Reporting was forwarded to the PICA. The PICA will use the TS 870 IC - Material Returns Supply Status (appendix 6D) to provide disposition instructions to the SICA designated. The SICA, in turn, will use the TS 870 IC - Material Returns Supply Status to provide disposition instructions to the reporting organization under Service implementing instructions.

When the SICA has excess NIMSC 5 serviceable stocks on hand, the SICA will prepare a TS 180 IC - Material Returns Reporting under the guidelines above but will use their own TS 180 IC - Material Returns Reporting transaction reference number to report or offer the material.

12.5 SUBMISSION OF OFFER OF MATERIAL REPORTS

Use the retention and reporting policy in DoD 4140.1-R to determine the criteria for reporting or offering material.

DAASC will screen part-numbered TS 180 IC - Material Returns Reporting for a possible conversion to an NSN using the information in the DLSC FLIS files.

12.6 CANCELLATION OF OFFERS OF MATERIAL

Organizations must promptly send a TS 180 IC - Material Returns Reporting cancellation, with Action Code C, for total or partial quantities, to the supply source when the material is no longer available in the quantity reported or when material which was directed for return will not be returned.

The need for timely and accurate cancellation actions under the above conditions is emphasized to avoid unnecessary followup actions and to ensure that the supply source records of expected returns reflect proper quantities.

In order to ensure that expiration-dated items have sufficient shelf life remaining to cover time for delivery and normal consumption by the receiver, holding organizations will submit a TS 180 IC - Material Returns Reporting with Action Code C when the remaining shelf life reaches 6 months.

12.7 PROCESSING REPLIES TO OFFERS OF MATERIAL

The ICP/IMM will use the TS 870 IC - Material Returns Supply Status (appendix 6D) with Status Report Code 7 to provide status or disposition instructions to the reporting organization. Reporting organizations will, based on the status received, take the following actions:

- Submit a TS 180 IC - Material Returns Reporting cancellation, with Action Code C, when it is determined that the material directed for return will not be returned.
- Use the TS 856 IC - Shipment Status Material Returns (appendix 6G) to promptly notify

the IMM/ICP when the material directed for return is released to the carrier. Identify appropriate data in the TS 856 IC - Shipment Status Material Returns, including the suffix of the individual TS 870 IC - Material Returns Supply Status, if applicable, and the treasury symbol number against which a credit for the PCH&T costs and the value of the returned material will be provided. Reporting organizations will use the TS 870 IC - Material Returns Supply Status with Status Report Code 3 to provide status to ICPs/IMMs when shipment is delayed on open TS 180 IC - Material Returns Reporting.

- Terminate any further action upon receipt of TS 870 IC - Material Returns Supply Status with T2 status; however, an organization may offer the material again in a subsequent cycle using a new TS 180 IC - Material Returns Reporting with a new transaction reference number.

Upon receipt of a TS 870 IC - Material Returns Supply Status with TS status from the ICP/IMM, the reporting organization will review records to determine previous action taken on the TS 180 IC - Material Returns Reporting. If shipment has not occurred, send a TS 870 IC - Material Returns Supply Status with Status Report Code 3 to the ICP/IMM to advise of delay in shipment and the ESD. If records indicate shipment has occurred, the reporting organization must query the transportation organization to ensure the material has actually been shipped. If the material has been shipped, the reporting organization will submit a TS 856 IC - Shipment Status Material Returns whether or not a TS 870 IC - Material Returns Supply Status had been submitted previously. If the material has not been shipped, ascertain when the shipment will be made and follow the above procedures. When less than the total quantity is to be shipped, the reporting organization will provide a TS 870 IC - Material Return Supply Status with Status Report Code 3 for the quantity to be shipped and a TS 180 IC - Material Returns Reporting with Action Code C for the quantity which will not be shipped. If any of the shipment has already occurred, the reporting organization will respond with a TS 870 IC - Material Returns Supply Status for the quantity which has been shipped and with a TS 870 IC - Material Returns Supply Status with status report code 3, for the quantity to be shipped, or a TS 180 IC - Material Returns Reporting cancellation for the remaining portions of the originally reported quantity, as appropriate. The reporting organization must respond to the TS 870 IC - Material Returns Supply Status with TS status within 30 days of its date of preparation, or the ICP/IMM will cancel the TS 180 IC - Material Returns Reporting.

When a TS 870 IC - Material Returns Supply Status is transmitted to the SICA, the SICA will forward the disposition instructions to the reporting organization under Service implementing instructions. The reporting organization will provide advice to the SICA regarding shipment or cancellation as appropriate, under Service implementing instructions, and the SICA will provide a TS 856 IC - Shipment Status Material Returns or a TS 180 IC - Material Returns Reporting cancellation with Action Code C to the PICA. If the SICA receives a TS 870 IC - Material Returns Supply Status with TS status from the PICA and has no record of the shipment, the SICA will follow up to the reporting organization and submit a TS 870 IC - Material Returns Supply Status with Status Report Code 3 to the PICA containing a future ESD to preserve the PICA's due-in record pending a firm reply to the TS 870 IC - Material Returns Supply Status with TS status.

When the ICP/IMM does not require the reported assets at the time offered; however, under the criteria of DoD 4140.1-R, the assets should be temporarily retained in-place, the ICP/IMM will provide TS 870 IC - Material Returns Supply Status with T5 status to the reporting organization with a future date to rereport the assets for final disposition.

12.8 INQUIRIES ON OFFERS OF MATERIAL

Reporting organizations will use the TS 180 IC - Material Returns Reporting inquiry with Action Code T to obtain intelligence regarding status of the original TS 180 IC - Material Returns Reporting when no response has been received and 30 days has passed from the date of submission of the original TS 180 IC - Material Returns Reporting. If TR status has been received, the TS 180 IC - Material Returns Reporting inquiry with Action Code T will be submitted at the expiration of the expected reply date cited in the TS 870 IC - Material Returns Supply Status.

Use the TS 180 IC - Material Returns Reporting with Action Code RS to request receipt status when material to be returned has been shipped as directed by a TS 870 IC - Material Returns Supply Status but the ICP/IMM TS 870 IC - Material Returns Supply Status transaction containing Status Code TL, TM, TN, TP, TQ, TV, or T1 has not been received. Submit TS 180 IC - Material Returns Reporting inquiries for receipt status no earlier than 70 days (CONUS) or 130 days (OCONUS) after shipment of the material.

Submit TS 180 IC - Material Returns Reporting inquiries to the ICP/IMM to whom the original TS 180 IC - Material Returns Reporting was submitted, except when the TS 870 IC - Material Returns Supply Status indicates rerouting to the correct ICP/IMM. In this case, submit the TS 180 IC - Material Returns Reporting inquiry to the ICP/IMM identified in the TS 870 IC - Material Returns Supply Status.

Use volume 7, chapter 4, to inquire on an authorized credit when the credit billing is not received after shipping the TS 180 IC - Material Returns Reporting material of which the TS 870 IC - Material Returns Supply Status from the ICP/IMM indicated a credit allowance.

12.9 AUTOMATIC RETURNS

Use the TS 180 IC - Material Returns Reporting with Action Code RF to identify an automatic return shipment. Supply sources will advise reporting organizations where to ship these items. Use the TS 856 IC - Shipment Status Material Returns to promptly notify the IMM/ICE when the material is released to the carrier. Use PD 06 for the return of material identified by the IMM as qualified for automatic return to the DoD distribution system.

All NIMSC 5, unserviceable (Supply Condition Code E or F), items are designated for automatic return on an inter-Service basis. PICAs will notify SICAs of the NSN and the storage organization to which such items are to be shipped. PICAs will notify the receiving storage organization of the NSNs authorized for return. The SICAs will disseminate this information to the SICA organizations using intra-Service procedures. If there is no S/A SICA for the items identified for automatic return by a PICA (for example, Coast Guard), the PICA will provide the information to the appropriate S/A designated organization.

When an unserviceable NIMSC 5 item is automatically returned and a replacement item will be requisitioned, the TS 180 IC - Material Returns Reporting with Action Code RF and subsequent transactions will include Project Code 3AL. If a replacement for the unserviceable NIMSC 5 automatic return item will not be requisitioned (such as, the returned item is excess to the returning organization's authorization or requirement), the TS 180 IC - Material Returns Reporting with Action Code RF and subsequent transactions will not contain Project Code 3AL. Ensure the TS 180 IC - Material Returns Reporting with Action Code RF, sent to the PICA, contains the data specified under section 12.4. Subsequent to generating the TS 180 IC - Material Returns Reporting with Action Code RF, processing will occur as though there had been a TS 180 IC - Material Returns Reporting and a TS 870 IC - Material Returns Supply Status,

along with other provisions of this chapter, excluding TS 180 IC - Material Returns Reporting inquiries and TR status.

No other inter-S/A use of the TS 180 IC - Material Returns Reporting with Action Code RF is currently authorized.

The TS 180 IC - Material Returns Reporting with Action Code RF will also be prepared and forwarded to the SICA for items identified and scheduled for repair under a DMISA. This does not apply to items scheduled for repair and return to the same Service when accountability is retained on the shipping organization property account records. S/As may use the TS 180 IC - Material Returns Reporting with Action Code RF internally for intra-S/A programs that do not conflict with other provisions of this manual.

12.10 INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER PROCESSING OF AUTOMATIC RETURNS

Upon receipt of the TS 180 IC - Material Returns Reporting Action Code RF, the SICA will establish a due-in for the quantity of the material to be returned, and furnish an ARI transaction to the receiving depot under chapter 13. NOTE: For unserviceable NIMSC 5 items, the SICA will forward the TS 180 IC - Material Returns Reporting, with appropriate data elements as identified in above section 12.4, to the PICA. The PICA will establish the due-in for the quantity of the material to be returned, and furnish a TS 527 IC - Due-In/Advance Receipt/Due Verification transaction to the receiving depot under chapter 13, (appendix 13A).

12.11 DEFENSE AUTOMATIC ADDRESSING SYSTEM

DAASC will pass TS 856 IC - Shipment Status Materiel Returns, TS 180 IC - Material Returns Reporting inquiries with Action Code T, and TS 180 IC - Material Returns Reporting with Action Code RF, to the organization(s) identified in the transaction. TS 180 IC - Material Returns Reporting and TS 856 IC - Shipment Status Materiel Returns from an ICP/IMM to another ICP/IMM will always be passed to the indicated ICP/IMM.

DAASC will perform NSN/NISIN validation and supply source edits as follows:

- If the NSN is correct and managed by the ICP/IMM identified, DAASC will include Advice Code 3T and submit the TS 180 IC - Material Returns Reporting to that ICP/IMM.
- If the NSN is correct but is not managed by the ICP/IMM identified, the DAASC will correct the ICP/IMM, include Advice Code 3T, and transmit TS 180 IC - Material Returns Reporting to the correct ICP/IMM. DAASC will provide TO status to the reporting organization.
- If the FSC/NISIN NSN validation indicates that the FSC is incorrect, DAASC will change the FSC, correct the ICP/IMM where applicable, include Advice Code 3T, and transmit TS 180 IC - Material Returns Reporting to the managing ICP/IMM. DAASC will provide TS 180 IC - Material Returns Reporting with TZ status to the reporting organization.
- If DAASC cannot accomplish routing to an ICP/IMM, DAASC will pass the transaction to the organization identified to receive the TS 180 IC - Material Returns Reporting.

DAASC will validate part-numbered TS 180 IC - Material Returns Reporting against the DLSC FLIS files in search of a potential NSN match. If an NSN is found, DAASC will change the part

number to an NSN for continued processing. DAASC will provide TS 870 IC - Material Returns Supply Status with TZ status as a result of part number/NSN changes. DAASC will provide TS 870 IC - Material Returns Supply Status with T9 status as a result of part-numbered transactions not matched to an NSN.

DAASC will edit TS 870 IC - Material Returns Supply Status with transactions containing Status Codes SC and SD and if a DLA/GSA/NAVY IMM has coded the item inactive in the DAASC records and a DLA, GSA, or Navy organization originated the TS 180 IC - Material Returns Reporting, DAASC will change the status code to TC and forward the TS 870 IC - Material Returns Supply Status to the reporting organization.

DAASC will edit TS 870 IC - Material Returns Supply Status rejections from GSA with Status Code SC and if the NSN cannot be identified, DAASC will provide TS 870 IC - Material Returns Supply Status with SD status to the reporting organization. If the NSN is correct, DAASC will provide TS 870 IC - Material Returns Supply Status with TC status to the reporting organization.

12.12

INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER PROCESSING OF OFFERS OF MATERIAL

The ICP/IMM will process TS 180 IC - Material Returns Reporting to determine the disposition of the reported assets. The ICP/IMM will insure TS 180 IC - Material Returns Reporting containing project codes assigned for specific returns program purposes; such as, rollbacks and automatic returns, are accorded processing consistent with their assigned controls. The ICP/IMM will respond to TS 180 IC - Material Returns Reporting no later than 30 days from the date of receipt of the TS 180 IC - Material Returns Reporting. If a response cannot be provided within 30 days, the ICP/IMM will provide TS 870 IC - Material Returns Supply Status with TR status with an estimated date to expect a reply. Responses to individual TS 180 IC - Material Returns Reporting may identify any of the conditions employing an MRP suffix. The ICP/IMM will use the TS 870 IC - Material Returns Supply Status to provide responses to the TS 180 IC - Material Returns Reporting.

If the offered material is in the process of being logistically reassigned and it is 60 days prior to the ETD when the TS 180 IC - Material Returns Reporting is received by the LIM and the LIM stockage position indicates that disposal action is appropriate, the LIM will provide TS 870 IC - Material Returns Supply Status with SM status to the reporting organization. SM status advises the reporting organization that disposal action is authorized; however, the item is in the process migrating and further action should be deferred until after the ETD.

If it is determined that the offered material will be used to fill a backordered requisition, a TS 940 IC - Material Release MRO will be generated under section 12.18 and a TS 870 IC - Material Returns Supply Status with status code TE will be provided to the reporting organization.

If the determination is made that the material is to be returned, the ICP/IMM will provide a TS 870 IC - Material Returns Supply Status with the appropriate status to the reporting organization, establish a due-in for the quantity of the material to be returned, and furnish an ARI transaction to the receiving depot under chapter 13. The EDD for the due-in will be 120 (CONUS) or 180 (OCONUS) days from the processing of the TS 870 IC - Material Returns Supply Status with a return status code. If the ICP/IMM authorizes the return of the material, credit billing for the PCH&T costs and the value of the returned material, if applicable, will be accomplished under volume 7, chapter 2, using the treasury symbol number indicated in the original TS 180 IC - Material Returns Reporting, or the TS 856 IC - Shipment Status Material Returns for automatic returns, after receipt and inspection of the material.

- The time allowed for shipment and return of material is 120 (CONUS) and 180 (OCONUS) days and the counting starts with the day of posting the TS 856 IC - Shipment Status Material Returns by the ICP/IMM or the ESD in the TS 870 IC - Material Returns Supply Status with Status Report Code 3. Update the due-in EDD upon receipt of the TS 856 IC - Shipment Status Material Returns or the TS 870 IC - Material Returns Supply Status, Status Report Code 3, to equal the time allowed for shipment and return of the material.
- If the material is not received by the due-in EDD or 30 days have elapsed since the transmission of the TS 870 IC - Material Returns Supply Status with TS status without receiving a response, the ICP/IMM will initiate cancellation action under chapter 5.
- Action taken to cancel the due-in and delete the ARI transaction does not preclude the requirements in other DoD manuals and joint regulations to initiate tracer action and file discrepancy reports on shipments not received but which shipment status has been received.

The ICP/IMM will cite an appropriate PD in the TS 870 IC - Material Returns Supply Status transaction as follows:

- PD 03 for the return of critical items and approved intensive management items (including serviceable local excesses of such items),
- PD 13 for all other conditions not covered above.

The ICP/IMM will use a TS 870 IC - Material Returns Supply Status transaction citing an appropriate S_ series reject status code to reject unprocessable TS 180 IC - Material Returns Reporting back to the reporting organization.

The ICP/IMM will suspend TS 180 IC - Material Returns Reporting received for items requiring extended review/screening and will provide TS 870 IC - Material Returns Supply Status with TR status to the reporting organization with an estimated date of reply.

12.13

INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER MATERIAL RETURNS RECEIPT STATUS

The ICP/IMM will prepare an TS 870 IC - Material Returns Supply Status, Status Report Code 7, and with Status Code TL, TM, TN, TP, TQ, TV, or T1 to provide reporting organizations with notification of material receipt or nonreceipt. Provide this status upon processing the TS 527 IC - Receipt, Inquiry, Response, and MRA (appendix 14A) with Transaction Type Code D4 for other than suspended condition material, or upon processing of an inventory adjustment action moving the assets from a suspended condition to the correct condition, or not less than 30 days after generation of an TS 870 IC - Material Returns Supply Status with TS status when no receipt or TS 856 IC - Shipment Status Material Returns has been processed.

Always indicate the transaction reference number, including the suffix code, as identified in the automatic return, TS 180 IC - Material Returns Reporting or in the TS 870 IC - Material Returns Supply Status.

The ICP/IMM will also use the receipt to generate crediting transactions under volume 7, chapter 2, for PCH&T costs and the value of the returned material, if applicable, using the treasury symbol number indicated in the original TS 180 IC - Material Returns Reporting, or the TS 856 IC - Shipment Status Material Returns for automatic returns.

12.14 INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER PROCESSING OF SHIPMENT STATUS

The TS 856 IC - Shipment Status Material Returns is an information transaction and normally requires no subsequent generation of transactions. The ICP/IMM will receive TS 856 IC - Shipment Status Material Returns and update appropriate ICP/IMM records. The shipment date is available for ICPs/IMMs to verify intransit status and provide information on expected receipts. The ICP/IMM will reject TS 856 IC - Shipment Status Material Returns transactions, received for NSNs that cannot be identified or do not match a previously submitted TS 180 IC - Material Returns Reporting, to the reporting organization with TS 856 IC - Shipment Status Material Returns Status Code SE. The ICP/IMM will reject TS 856 IC - Shipment Status Material Returns that do not pass other data field validity checks with TS 856 IC - Shipment Status Material Returns and the appropriate S_ series status codes.

In the event that the ICP/IMM requires advice of shipment to support related supply decisions and the TS 856 IC - Shipment Status Material Returns has not been received, the ICP/IMM will send an TS 870 IC - Material Returns Supply Status with TS status to the reporting organization. Do not generate the TS 870 IC - Material Returns Supply Status with TS status until at least 5 days have elapsed from the transmission of the TS 870 IC - Material Returns Supply Status (PD 03) or 50 days (PD 13) and no TS 856 IC - Shipment Status Material Returns nor receipt has been posted. A TS 870 IC - Material Returns Supply Status with T3 status may be generated upon expiration of the due-in timeframe when a TS 856 IC - Shipment Status Material Returns has been received, but the receipt has not been posted. The ICP/IMM is authorized to follow up without regard to the established timeframe when the need arises to satisfy PD 01-08 requirements. If a TS 870 IC - Material Returns Supply Status, Status Report Code 3, is received indicating an estimated date of shipment, the ICP/IMM will update appropriate records. If the TS 870 IC - Material Returns Supply Status, Status Report Code 3, contains an NSN that cannot be identified or contains data that does not match an existing TS 180 IC - Material Returns Reporting, the ICP/IMM will reject the TS 870 IC - Material Returns Supply Status with Status Report Code 3 with Status Code SE.

12.15 INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER PROCESSING OF OFFERS OF MATERIAL INQUIRIES AND REQUESTS FOR RECEIPT STATUS

On receipt of a TS 180 IC - Material Returns Reporting inquiry, the ICP/IMM will determine if there is a record indicating that the original TS 180 IC - Material Returns Reporting was received.

- If a record is established and TR status indicating delayed response was furnished to the customer, a duplicate TS 870 IC - Material Returns Supply Status with TR status or a TS 870 IC - Material Returns Supply Status with an appropriate status code, will be provided. If a record is established and a TS 870 IC - Material Returns Supply Status was not provided, one of the following actions will be initiated:
 - If the TS 180 IC - Material Returns Reporting is in process, provide TS 870 IC - Material Returns Supply Status with TR status to the customer.
 - If the TS 180 IC - Material Returns Reporting was rejected by the ICP/IMM as invalid, the TS 180 IC - Material Returns Reporting inquiry will produce a TS 870 IC - Material Returns Supply Status to the reporting organization with the same status code utilized in the original TS 870 IC - Material Returns Supply

Status.

On receipt of a TS 180 IC - Material Returns Reporting with Action Code RS the ICP/IMM will review records and take action as follows:

- If the records indicate that the material has been received and classified, transmit a TS 870 IC - Material Returns Supply Status with an appropriate T_ series status code to the customer.
- If the records indicate that the material has been received but not classified, provide TS 870 IC - Material Returns Supply Status with TT status to the customer.
- If the records indicate that the material has not been received and if the material is not located after investigation, provide TS 870 IC - Material Returns Supply Status with TU status to the reporting organization.

TS 180 IC - Material Returns Reporting inquires with Action Code T or requests for receipt status TS 180 IC - Material Returns Reporting with Action Code RS received for items not under the cognizance of the ICP/IMM will be rejected to the reporting organization using TS 870 IC - Material Returns Supply Status with SC status.

Use the procedures in volume 7, chapter 4, to process inquiries on credit for returns.

12.16

**INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER
PROCESSING OF CANCELLATIONS FOR OFFERS OF MATERIAL**

Upon receipt of a TS 180 IC - Material Returns Reporting cancellation with Action Code C, the ICP/IMM will take necessary action to cancel or reduce the quantity in all applicable transactions affected by the cancellation request including the decision to return, the due-in record, the ARI transaction, and the credit suspense, if applicable. The cancellation of the due-in and ARI transaction will be controlled under the procedures of chapter 13.

The ICP/IMM will initiate cancellation action when the material is not received by the due-in EDD or when the material is not received and no response has been received within 30 days after their TS 870 IC - Material Returns Supply Status with TS status. The ICP/IMM will also initiate cancellation action if a TS 856 IC - Shipment Status Material Returns is not received within 120 (CONUS) OR 180 (OCONUS) days after receipt of the TS 870 IC - Material Returns Supply Status with Status Report Code 3, indicating an estimated date of shipment. TS 180 IC - Material Returns Reporting cancellations will be accomplished as follows:

- For creditable returns, the ICP/IMM notifies the reporting organization with TS 870 IC - Material Returns Supply Status with TP status.
- For noncreditable returns, the ICP/IMM notifies the reporting organization with TS 870 IC - Material Returns Supply Status with TV status.

The ICP/IMM will use these same cancellation procedures when TS 180 IC - Material Returns Reporting material has not been received within 120 days (CONUS) or 180 days (OCONUS) from the action date in the TS 870 IC - Material Returns Supply Status or from the receipt posting date of the TS 856 IC - Shipment Status Material Returns, whichever is later. The cancellation of the due-in and ARI transaction will be controlled under the procedures of chapter 13.

12.17 INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER PROCESSING OF OFFER OF MATERIAL REPORTS, CANCELLATIONS, AND FOLLOWUPS WHEN THE SUPPLY SOURCE HAS CHANGED

Upon receipt of a TS 180 IC - Material Returns Reporting cancellation or inquiry from DAASC with Advice Code 3T when the supply source has been changed, the losing supply source will arrange to change the DLSC FLIS and DAASC supply source files.

Then, the losing supply source will transmit TS 180 IC - Material Returns Reporting cancellations, and/or inquiries, containing Advice Code 3U to the gaining supply source.

12.18 INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGEMENT LATERAL REDISTRIBUTION OF ASSETS

This section outlines procedures for generating TS 940 IC - Material Release (appendix 5F) and related transactions to redistribute reported TS 180 IC - Material Returns Reporting material that has been identified through an inter- or intra-Service retail asset visibility system.

These procedures exclude GFM, SA, and CFM backorders except on an intra-Service basis.

If a requisition/backorder is to be supplied by lateral redistribution of TS 180 IC - Material Returns Reporting material, provide TE status to the reporting activity, and generate the TS 940 IC - Material Release with appropriate data from the requisition, the DoDAAC of the organization holding the assets, and the supply source's DoDAAC. Forward the MRO through DAASC to the reporting organization. Provide BA status to all eligible status recipients with an ESD of 15 days from the date of the transaction.

12.18.1 The reporting organization will:

- Process the TS 945 IC - Material Release on a fill/kill basis.
- Use the TS 945 IC - Material Release Advice to provide BA status for the material processed, or CB status for the material denied, to the FROM organization identified in the TS 940 IC - Material Release Advice.
- Provide a shipping transaction to ship the requested quantity of material to the organization identified in the TS 945 IC - Material Release as the SHIP-TO organization. When the material is shipped, transmit a shipping advice TS 945 IC - Material Release Advice to the FROM organization identified in the TS 945 IC - Material Release. Include in the shipping advice the treasury symbol number(s) under which to provide the credit for the PCH&T costs and the value of the shipped material.

12.18.2 The ICP/IMM will:

- Generate BA status with an ESD determined by adding 10 days to the ESD provided in the material release to the status organizations identified in the original requisition.
- Upon receipt of the shipping advice TS 945 IC - Material Release Advice, generate billing transactions to the requisitioner and use the TS 945 IC - Material Release Advice to generate crediting transactions for the standard price of the material and PCH&T costs to the reporting organization.
- Provide shipment status TS 856 IC - Shipment Status Material Returns to the

requisitioning organization based on the TS 945 IC - Material Release Advice received from the reporting organization.

- Reinstatement of the requisition upon receipt of CB status and provide appropriate status to the requisitioner.
- Generate requisition followups under chapter 5 procedures when the initial BA or CB status is not received on MROs within 10 days and continue to do so until status is received.
- Generate requisition followups under chapter 5 procedures every 10 days after the expiration of the ESD provided in the TS 945 IC - Material Release Advice.

APPENDIX 12A

TRANSACTION SET 180 IMPLEMENTATION CONVENTION MATERIAL RETURNS REPORTING

180 Return Merchandise Authorization and Notification

This Draft Standard for Trial Use contains the format and establishes the data contents of the Return Merchandise Authorization and Notification Transaction Set (180) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can provide for customary and established business and industry practice relative to the returning of merchandise to the vendor. This transaction set may satisfy request for returns, authorization or disposition of the return, notification of return, or notification of consumer return.

Implementation Notes

1. Organizations use this transaction set to report the availability of material to the wholesale distribution system, to report the automatic shipment of material to storage or repair facilities, to request cancellation of previously submitted reports, and to inquire about the status of previously submitted transactions.
2. Use a single occurrence of this transaction set to transmit reports of material availability, notifications of automatic shipment, requests to cancel previously submitted transactions, or inquiries about previously submitted transactions to one or more IMM/ICPs. Use one occurrence of this transaction set to transmit a single or multiple transactions.
3. A single transaction set may contain a combination of transactions for standard and nonstandard material.
4. Each transaction within a transaction set may report, for a single transaction number, one or more quantities distinguished by one or more characteristics.

NOTES/COMMENTS:

2/010 Quantity is specified either in the BLI segment (BLI03) or in the QTY segment.

2/140 The N1 segment is used to identify the location of the material specified in the QTY loop.

2/170 The LX loop conveys serial number, lot number and inventory data.

2/200 The N1 segment identifies the name of the manufacturer associated with the serial or lot number specified in the LX loop.

Segment: **ST** Transaction Set Header
Level: Header
Loop: ____
Usage: Mandatory
Max Use: 1
Purpose: To indicate the start of a transaction set and to assign a control number
Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).
Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
		180	X12.255 Return Merchandise Authorization and Notification			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BGN Beginning Segment
Level: Header
Loop: _____
Mandatory
Usage: Mandatory
Max Use: 1
Purpose: To indicate the beginning of a transaction set.
Syntax: C0504 — If BGN05 is present, then BGN04 is required.
Semantic: 1. BGN02 is the transaction set reference number.
2. BGN03 is the transaction set date.
3. BGN04 is the transaction set time.
4. BGN05 is the transaction set time qualifier.
5. BGN06 is the transaction set reference number of a previously sent transaction affected by the current transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BGN01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>	M ID 2/2
Mandatory	BGN02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier. Implementation Note: <i>Place a code Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z satisfies the X12 usage requirements; the receiving application software shall not process it.</i>	M AN 1/30
Mandatory	BGN03	373	Date Date (YYMMDD).	M DT 6/6
			Implementation Note: <i>Express the originating activity's date of transaction set preparation in GMT.</i>	
Required	BGN04	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) Implementation Notes: 1. Express the originating activity's time of transaction set preparation in GMT.	C TM 4/8

2. Express time in a four-position (HHMM) format.

Not Used	BGN05	623	Time Code	O	ID	2/2
Not Used	BGN06	127	Reference Number	O	AN	1/30
Required	BGN07	640	Transaction Type Code Code specifying the type of transaction.	O	ID	2/2

FT Material Returns

Code Value Implementation Note:

Use to indicate the transaction set contains material returns program transactions.

Optional	BGN08	306	Action Code Code indicating type of action.	O	ID	1/2
----------	-------	-----	--	---	----	-----

Implementation Note:

Use only to indicate that the transaction set contains transactions notifying IMM/ICPs of automatic shipments, requesting cancellation of previously submitted reports, or inquiring about the status of previously submitted transactions.

C Cancelled

Code Value Implementation Note:

Use to indicate a request to cancel a previously submitted report of material availability.

RF Returned to Shipper's Facility (Other Than Original Shipping Location)

Code Value Implementation Note:

Use to indicate a notification of an automatic return shipment.

RS Report Status

Code Value Implementation Note:

Use to indicate a request to provide receipt status for material previously reported as shipped.

T Status Query

Code Value Implementation Note:

Use to indicate an inquiry to the ICP/IMM requesting a reply to a previously submitted report of material availability.

Segment: DTM Date/Time Reference**Level:** Header**Loop:** _____**Required****Usage:** Optional**Max Use:** 10**Purpose:** To specify pertinent dates and times**Syntax:** 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.**Implementation Note:***Use to define the transaction preparation date.***Data Element Summary**

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
			097 Transaction Creation			
			Code Value Implementation Note: <i>Use to indicate the date of transaction preparation.</i>			
Required	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8
Not Used	DTM04	623	Time Code LT Local Time	O	ID	2/2
Not Used	DTM05	624	Century	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Required

Segment: N1 Name

Level: Header

Loop: N1 **Repeat:** 200

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/120 loop will, as a minimum, cite the organization originating the transaction set.
2. Use this 1/N1/120 loop to indicate an organization when an N101 qualifier code (e.g., SF) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/060 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/N101/120 that does not apply to all of the table 2 iterations. (Codes subject to override: CN, SF, Z4 and ZB.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
	41	Submitter	
	CN	Consignee	
		Code Value Implementation Note:	
		Use as needed for automatic shipment notifications, but only to identify the consignee for the returned material.	
	SF	Ship From	
		Code Value Implementation Note:	
		Use as needed for material availability reports and automatic shipment notifications, but only to identify the organization from which the material is shipped if different from the organization originating the transaction set.	
	Z4	Owning Inventory Control Point	
	ZB	Party to Receive Credit	
		Code Value Implementation Note:	
		Use as needed for material availability reports and automatic shipment notifications, but only to identify the organization to receive credit if different from the organization originating the transaction set.	

Not Used	N102	93	Name	C	AN	1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67).	C	ID	1/2
			10 Department of Defense Activity Address Code (DODAAC)			
			M4 Department of Defense Routing Identifier Code (RIC)			
Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/120 codes to indicate the organization sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/170 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 79) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/057 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10.) Do not cite any qualifier code in 1/LQ01/180 that does not apply to all the table 2 iterations. (Codes subject to override: 0, 79, and 87.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code	M	ID	2/2
			Code identifying the agency assigning the code values.			
			DF Department of Defense (DoD)			
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: LQ Industry Code
Level: Header
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:
Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code 79 Priority Designator Code Code Value Implementation Note: <i>Use as needed for notifications of automatic return, but only to identify the supply priority associated with the material.</i> 87 Subsistence Type of Pack Code Code Value Implementation Note: <i>Use with subsistence items only.</i>	O ID 1/3
Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20

Required

Segment: BLI Baseline Item Data

Level: Detail

Loop: BLI **Repeat:** 500

Usage: Optional

Max Use: 1

Purpose: To specify basic item data: item identification, quantity, and price

Syntax: 1. P0506 — If either BLI05 or BLI06 is present, then the other is required.

2. C0706 — If BLI07 is present, then BLI06 is required.

3. P0809 — If either BLI08 or BLI09 is present, then the other is required.

4. P1011 — If either BLI10 or BLI11 is present, then the other is required.

5. P1213 — If either BLI12 or BLI13 is present, then the other is required.

Semantic: BLI04, the unit of measure code applies to both quantity, (BLI03) and unit price (BLI06), unless BLI07 is present, in which case BLI04 applies only to BLI03, and BLI07 applies only to BLI06.

Comments: 1. Element 235/234 combinations should be interpreted to include products or services. See the Data Element Dictionary for a complete list of IDs.

2. BLI01, BLI02, and BLI08 through BLI13 provide for four different product/service IDs for each item. For example: Case, Color, Drawing No., UPC No., ISBN No., Model, SKU.

Implementation Note:

Use to identify the material associated with the transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
BLI01	235	Product/Service ID Qualifier	M ID 2/2
		Code identifying the type/source of the descriptive number used in Product/Service ID (234).	

Implementation Note:

Use only one of codes A1, A2, A4, FB, FS, FT, MG, or YP to properly identify the material associated with the transaction.

A1 Plant Equipment Number

Code Value Implementation Note:

Use to identify plant equipment.

A2 Department of Defense Identification Code (DoDIC)

Code Value Implementation Note:

Use to identify ammunition items.

A4 Subsistence Identification Number

Code Value Implementation Note:

Use to identify subsistence items.

FB Form Number

Code Value Implementation Note:*Use to identify the form stock number.*

FS National Stock Number

Code Value Implementation Note:*Must use the NSN when known.*

FT Federal Supply Classification

Code Value Implementation Note:*Use to identify nonstandard material when a part number is not available and material can only be identified by description (e.g., non-NSN lumber products).*

MG Manufacturer's Part Number

Code Value Implementation Note:*Use to identify nonstandard material.*

YP Publication Number

Code Value Implementation Note:*Use to identify the publication stock number.*

Mandatory	BLI02	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Not Used	BLI03	380	Quantity	O	R	1/15
Not Used	BLI04	355	Unit or Basis for Measurement Code	O	ID	2/2
Not Used	BLI05	236	Price Identifier Code	C	ID	3/3
Not Used	BLI06	212	Unit Price	C	R	1/17
Not Used	BLI07	355	Unit or Basis for Measurement Code	O	ID	2/2
Conditional	BLI08	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2

Implementation Notes:

1. Use only one of codes CN or ZB to properly identify the material associated with the transaction.
2. When citing a manufacturer's part number (code MG) in BLI01, always use code ZB to identify the manufacturer's CAGE.
3. When citing the FSC (code FT) in BLI01, always use code CN to identify the commodity name or description.

CN Commodity Name

Code Value Implementation Note:*Use only with code FT to identify the material name or description.*

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:*Use only with code MG to uniquely identify a manufacturer's part number.*

Conditional	BLI09	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
Not Used	BLI10	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	BLI11	234	Product/Service ID	C	AN	1/40
Not Used	BLI12	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	BLI13	234	Product/Service ID	C	AN	1/40

Required

Segment: N9 Reference Number

Level: Detail

Loop: BLI

Usage: Optional

Max Use: 20

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:

Use multiple repetitions as needed to identify information related to the transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N901	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2
		TN Transaction Reference Number			
		Code Value Implementation Note: <i>Use to identify the transaction number for each transaction.</i>			
		W8 Suffix			
		Code Value Implementation Note: <i>Use as needed for cancellation requests and inquiries, but only to identify the transaction number suffix.</i>			
		YM Resource Screening Reference			
		Code Value Implementation Note: <i>Use R as needed in N902 for reports of material availability, but only to identify to the IMM/ICP that material has been selected for concurrent screening by DEPR.</i>			
Required	N902	127 Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369 Free-form Description	C	AN	1/45
Not Used	N904	373 Date	O	DT	6/6
Not Used	N905	337 Time	C	TM	4/8
Not Used	N906	623 Time Code	O	ID	2/2

Optional

Segment: AT Financial Accounting
Level: Detail
Loop: BLI
Usage: Optional
Max Use: >1
Purpose: To transmit financial accounting data
Syntax: C1001 — If AT10 is present, then AT01 is required.
Comment: AT09 identifies unique local activity financial accounting information

Implementation Note:

Use in reports of material availability and notifications of automatic return only to identify the funds to credit for the cost of material, PCH, and transportation costs associated with the return of the material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	AT01	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
			Implementation Note: Use to identify the DLMS Fund Purpose Code. Use any code except CR or DR.	
Optional	AT02	1282	Treasury Symbol Number Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure	O AN 7/21
			Implementation Note: Cite the basic appropriation (departmental index, fiscal year, treasury account number) and limit/subhead.	
Optional	AT03	1283	Budget Activity Number Number identifying an administrative subdivision of funds against which a transaction is to be charged for a standard accounting classification coding structure	O AN 1/16
Optional	AT04	1284	Object Class Number Number identifying the nature of the goods or services acquired and a specific office or organization using resources for a standard accounting classification coding structure	O AN 3/12
Required	AT05	1285	Reimbursable Source Number Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure	O AN 1/3
			Implementation Note: Use to identify the DLMS fund code.	
Optional	AT06	1286	Transaction Reference Number Number identifying an original request for goods and services to the matching financial transaction for a standard accounting classification coding structure	O AN 4/20

Optional	AT07	1287	Accountable Station Number Number identifying an office responsible for entering a financial transaction into the applicable accounting system for a standard accounting classification coding structure	O AN 3/8
Optional	AT08	1288	Paying Station Number Number identifying an office responsible for making a payment or collection and the corresponding voucher number under which the action was taken for a standard accounting classification coding structure	O AN 8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O AN 1/80
Implementation Note: <i>Use for supplemental accounting classification data.</i>				
Not Used	AT10	1270	Code List Qualifier Code	O ID 1/3

Optional

Segment: LM Code Source Information**Level:** Detail**Loop:** LM **Repeat:** 10**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Notes:**

1. For any specific table 2 iteration use this 2/LM/057 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/170 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/170 loop with a different DoD code in the 2/LM/057 loop when the same LQ01 qualifier is used in both loops but the LQ02 DoD code is different. (Codes subject to override: 0, 79, and 87.)

2. Use only for reports of material availability and notifications of automatic shipment.

Segment: N1 Name**Level:** Detail**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 2/N1/060 loop will, as a minimum, cite the organization(s) to receive the transaction set.

2. For any specific table 2 iteration use this 2/N1/060 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/120 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them or 3) to override an address in the 1/N1/120 loop with a different address specified in the 2/N1/060 loop when the same N101 qualifier is used in both loops but the N104 address is different. (Codes subject to override: CN, SF, Z4, and ZB.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CN Consignee	
		Code Value Implementation Note:	
		Use as needed for automatic shipment notifications, but only to identify the consignee for the returned material.	
		SF Ship From	
		Code Value Implementation Note:	
		Use as needed for material availability reports and automatic shipment notifications, but only to identify the organization from which the material is shipped if different from the organization originating the transaction set.	
		Z1 Party to Receive Status	
		Code Value Implementation Note:	
		Use to indicate the party to receive status when different from Service/Agency prescribed status recipient. Use multiple iterations to identify all status recipients, as required.	
		Z4 Owning Inventory Control Point	
		ZB Party to Receive Credit	

Code Value Implementation Note:

Use as needed for material availability reports and automatic shipment notifications, but only to identify the organization to receive credit if different from the organization originating the transaction set.

Not Used	N102	93	Name	C	AN	1/35
Required	N103	66	Identification Code Qualifier	C	ID	1/2
			Code designating the system/method of code structure used for Identification Code (67).			
			10 Department of Defense Activity Address Code (DODAAC)			
			M4 Department of Defense Routing Identifier Code (RIC)			
Required	N104	67	Identification Code	C	AN	2/20
			Code identifying a party or other code.			
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code	O	ID	2/2
			Code identifying an organizational entity, a physical location, or an individual			

Implementation Note:

Use code TO in conjunction with the appropriate 2/N101/060 code to indicate the organization to receive the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Required

Segment: QTY Quantity**Level:** Detail**Loop:** QTY **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To specify quantity information.**Implementation Note:**

Use multiple iterations of the 2/QTY/110 loop, as needed, to stratify quantities associated with the transaction by supply condition code.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
QTY01	673	Quantity Qualifier	M ID 2/2

Code specifying the type of quantity.

01 Discrete Quantity**Code Value Implementation Note:**

Use as needed for requests for cancellation, but only to identify the quantity from the original report of material availability which is no longer available.

28 Quantity Available for Return**Code Value Implementation Note:**

Use as needed for reports of material availability, but only to identify the quantity available.

38 Original Quantity**Code Value Implementation Note:**

Use as needed for inquiries requesting a reply to a previously submitted report, but only to identify the quantity of the original report.

39 Shipped Quantity**Code Value Implementation Note:**

Use as needed for notifications of automatic shipment, but only to identify the quantity shipped.

AA Unacknowledged Quantity**Code Value Implementation Note:**

Use as needed for receipt acknowledgment inquiries, but only to identify the quantity shipped.

Mandatory

QTY02	380	Quantity	M R 1/15
-------	-----	----------	----------

Numeric value of quantity.

Implementation Note:

Express the quantity as a whole number with no decimal. For example if the quantity is 20, cite only 20.

Optional

QTY03	355	Unit or Basis for Measurement Code	O ID 2/2
-------	-----	------------------------------------	----------

Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken

Implementation Note:

Use as needed for reports of material availability and notifications of automatic return, but only to identify the unit of issue of the item. (See the unit of issue conversion table in volume 1, chapter 10.)

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use as needed for reports of material availability and notifications of automatic shipment, but only to identify dates associated with the material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory

13 DUE-IN AND ADVANCE RECEIPT INFORMATION

13.1 GENERAL

This chapter prescribes standard procedures for transmitting information about incoming material between wholesale managers and storage activities and between LIMs and GIMs. The procedures require timely establishment of due-in information for all anticipated receipts of material, and require that managers provide receiving storage activities with information for anticipated receipts.

This chapter also provides for the control of due-in records below the wholesale level to accommodate the DoD closed-loop system addressed in chapter 14 which provides accountability and monitors receipt of shipments of DoD and GSA wholesale stocks and DRMS stocks which are issued from onhand assets or procured for DVD. These procedures provide for interface among the transportation, quality, supply, and financial operations/ systems below the wholesale level and between the supply and purchasing operations/ systems at the wholesale level to provide proper control over intransit assets and document receipt in the payment files.

Documentation covering consignment of material to storage activities is prescribed in other DoD and Service/Agency regulations. These documents are used, together with information developed by inspection and classification procedures, as source data for documenting transactions in terms of this manual. The distribution of disbursement, procurement, and transportation documentation by storage activities is also governed by existing regulations and is, therefore, not a consideration here.

For material receipt/return code definitions, see the implementation convention for the TS 527 IC - Due-in/Advance Receipt/Due Verification application (appendix 13A).

Use the TS 527 IC - Due-in/Advance Receipt/Due Verification application as follows:

- Managers use to establish ARI at the storage activity
- GIMs use for due-in reconciliation and to inquire about delinquent due-in transactions.
- LIMs use to provide the GIM with memorandum due-in information, to respond to GIM due-in reconciliations and inquiries, and to provide the GIM revised due-in EDDs as changes occur

13.2 CONTROL OF MATERIAL DUE-IN

Managers shall establish due-in records for all anticipated receipts of material to maintain property accountability or visibility of material due-in to inventory, as required under chapter 7, Physical Inventory Control. The due-in records shall include data required for dues-in by appendix 13A.

Managers shall maintain due-in records in a current status. Use revised delivery schedules, notification of shipment or delayed shipment, repair schedules and repair schedule changes, contracts and contract changes, customer and manager cancellations, material receipts, and completion of shipment tracer/discrepancy reporting actions to establish, revise, and delete due-in records and appropriate delivery dates. For returns directed under the material returns program, compute the estimated delivery date as indicated in the material returns program procedures. For all other dues-in, compute the estimated delivery date to equal the

actual/estimated shipment/release date, provided in delivery schedules or shipment notifications, plus DoD 4410.6.

When managers direct material for return based on a reported product quality deficiency, they will prescribe use of TS 527 IC - Die-in/Advance Receipt/Due Verification with SCC Q in the disposition instructions to the returning activity. Managers shall establish and monitor dues-in for all returns of potential/confirmed product quality deficiency related material, citing the transaction number included in the report. Provide TS 527 IC - Die-in/Advance Receipt/Due Verification for the returns, to receiving storage activities, under section 13.4 citing the due-in transaction number and SCC Q.

Managers shall establish an audit trail when deleting or reversing due-in quantities. All due-in deletions and reversals shall interface with the financial system. Due-in deletions and reversals are prohibited without advance coordination between the supply and financial functions, and with the procurement function for dues-in from procurement instrument sources, unless the supply, financial, and procurement systems are fully integrated. When deleting or reversing due-in quantities, managers shall initiate action to correct the receiving storage activity's ARI file under section 13.4.

Services and Agencies shall establish the necessary interface between the supply and financial operations/functions to account for material intransit as required under DoD 7220.9-M. For shipments between Government activities, property accountability passes to the recipient upon release of material to carrier and notification of the shipment. For contract shipments, property accountability passes upon transfer of title, as specified in the contract.

Managers shall monitor due-in records and inquire to storage activities for information on intransit dues-in under the chapter 14 procedures.

13.3 PROVIDING THE STORAGE ACTIVITY WITH ADVANCE RECEIPT INFORMATION (FORMERLY PRE-POSITIONED MATERIAL RECEIPT)

Managers shall provide storage activities with due-in information for scheduled material receipts by providing them with TS 527 IC - Die-in/Advance Receipt/Due Verification. For dues-in from procurement instrument sources, manager's shall include applicable contract information and packaging data, allowed by the convention, to facilitate the receiving process and reduce need for hard copy contracts at receiving activity.

Storage activities receiving TS 527 IC - Die-in/Advance Receipt/Due Verification will maintain them in an ARI file pending receipt of the material or the receipt of updates to the ARI from the manager.

Managers shall transmit ARI transactions and ARI transaction reversals as due-in records are revised so that receiving storage activities can maintain the records to reflect status equivalent to manager due-in records. Managers shall submit ARI reversals to the storage activities when deleting due-in records. Managers shall also submit ARI reversals when revising due-in records (e.g., dates, quantities, destinations) and simultaneously transmit replacement ARI transactions reflecting revised due-in record data.

13.4 MAINTAINING ACCOUNTABILITY DURING MAINTENANCE ACTIONS

When responsibility for maintaining the property accountability record for DoD-owned property has been assigned to an activity(ies) other than the owner, the responsible activity shall execute the owner's actions set forth in this section.

These procedures apply for returns to inventory including unused material, relocations of material for maintenance, and receipts from assembly, disassembly, reclamation, conversion, modification, repair and destructive or nondestructive test/evaluation consigned by DoD, other Government (non-DoD) Agency, or commercial activities.

These procedures exclude repair and return material owned below the wholesale distribution system; however, storage activities will internally maintain visibility of such material when system capability permits.

13.4.1 REQUIREMENTS

Owners (Principals for maintenance by DMISA) shall establish a due-in, in accordance with section 13.3 TS 527 IC - Die-in/Advance Receipt/Due Verification citing Reason for Material Receipt/Return Code I, J, or K when material is being returned from field activities to wholesale storage activities or to commercial activities for maintenance. Also, provide ARI transactions to receiving Government storage activities, under section 13.4 TS 527 IC - Die-in/Advance Receipt/Due Verification citing Reason for Material Receipt/Return Code I, J, or K. Take these actions upon receipt of material returns program transactions, or equivalent intra-Service documents, reporting return of the material. (Services/Agencies may delegate the ARI transaction requirement to intermediate level or transshipment activities.)

When owners direct relocation of material from a remote storage activity to the storage activity collocated with the maintenance activity they shall establish a due-in, in accordance with section 13.3 TS 527 IC - Die-in/Advance Receipt/Due Verification citing Material Receipt/Return Code N for the intransit material. Also, provide a TS 527 IC - Die-in/Advance Receipt/Due Verification to the receiving storage activity, under section 13.4, citing Reason for Material Receipt/Return Code N.

13.5 LOAN MATERIAL

Use appropriate adjustment and/or receipt transactions to reflect the onhand/due-in and subsequent receipts. Reflect material on loan on accountable activity records in the appropriate purpose code (as prescribed by Service/Agency procedures--usually code L to denote loan) or as a nonprocurement source due-in citing Reason for Material Receipt/Return Code H depending on the method/system applied.

13.6 LOGISTICS REASSIGNMENT MEMORANDUM DUE-IN AND ADVANCE RECEIPT INFORMATION

The LIM will furnish a memorandum due-in information TS 527 IC - Die-in/Advance Receipt/Due Verification as of the ETD to the GIM, for both awarded contracts and unawarded purchase requests. Quantities will reflect only that which is available for transfer. The GIM will process valid memorandum due-in transactions to establish memorandum due-in records. If the GIM receives a memorandum due-in transaction for an item not involved in an LR, the GIM shall reject the transaction back to the initiator using TS 824 IC - Reject citing Advice Code AY.

Under DoD 4140.26-M policy, the LIM will take action to change the destination of undelivered purchases upon request of the GIM. Upon changing the quantity due-in/destination, the LIM will prepare and transmit a memorandum due-in reversal and a new memorandum due-in to the GIM in accordance with section 13.4. Additionally, when an award is made for an unawarded

purchase request, the LIM will prepare and transmit a memorandum due-in reversal TS 527 IC - Die-in/Advance Receipt/Due Verification and a new memorandum due-in TS 527 IC - Die-in/Advance Receipt/Due Verification to the GIM and a TS 527 IC - Die-in/Advance Receipt/Due Verification to the applicable storage activity.

To preclude the need for due-in inquiry transactions by the GIM, the LIM will provide revised EDDs as changes occur using TS 527 IC - Die-in/Advance Receipt/Due Verification with Asset Transfer Status Code AF.

13.7 LOGISTICS REASSIGNMENT DUE-IN VALIDATION

13.7.1 DUE-IN INQUIRY

13.7.1.1 INQUIRY FOR DUE-IN WITH EXPIRED EDD

The GIM will initiate a TS 527 IC - Die-in/Advance Receipt/Due Verification due-in inquiry when the EDD for delivery of material is delinquent by more than 30 calendar days. Compute the delinquent date from the memorandum due-in which the LIM provided on the ETD. The GIM will also initiate a TS 527 IC - Die-in/Advance Receipt/Due Verification when a revised due-in date subsequently becomes delinquent by 30 calendar days.

13.7.1.2 INQUIRY FOR DUE-IN WITH INVALID EDD

The GIM will initiate a TS 527 IC - Die-in/Advance Receipt/Due Verification due-in inquiry 30 calendar days after the ETD when the memorandum due-in, which the LIM provided on the ETD, contains an invalid EDD (e.g., for material pending procurement/contract action by the LIM). The GIM will initiate a second inquiry 60 calendar days after the ETD for all dues-in with invalid EDDs. If the LIM does not reply to the second inquiry, the GIM will intervene off-line. The GIM will include all dues-in with invalid EDDs 90 calendar days after the ETD in the reconciliation (see section 13.6.3). Based on the response, the GIM will determine if additional inquiry/reconciliation action is required.

13.7.2 RESPONSE TO DUE-IN INQUIRY

The LIM will provide the GIM with due-in information in response to an inquiry citing the appropriate asset transfer status code.

13.7.3 DUE-IN RECONCILIATION REQUEST

Services and Agencies shall use the reconciliation process is used to verify that the GIM is in receipt of all procurement/contract award data for assets due-in and the most current EDDs available. This process will also ensure that all items still pending procurement/contract award on the ETD are still valid.

The GIM will initiate a TS 527 IC - Die-in/Advance Receipt/Due Verification request for reconciliation of dues-in for logistically reassigned material 90 calendar days after the ETD and semiannually thereafter for all material which has not been received. The GIM will include all items with material still due-in to the LIM, regardless of the presence of a current EDD, in the reconciliation request.

13.7.4 DUE-IN RECONCILIATION RESPONSE

The LIM will respond to due-in reconciliation requests using a TS 527 IC - Die-in/Advance Receipt/Due Verification containing the appropriate asset transfer status code. The LIM will ensure that due-in information for all items still pending procurement/contract action, pending delivery, or in litigation is readily available to respond to the reconciliation request.

APPENDIX 13A

TRANSACTION SET 527 IMPLEMENTATION CONVENTION DUE-IN/ADVANCE RECEIPT/DUE VERIFICATION

527 Material Due-In and Receipt

This Draft Standard for Trial Use contains the format and establishes the data contents of the Material Due-In and Receipt Transaction Set (527) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide advanced notification of scheduled material receipts, to report receipts, and to inquire about the status of receipt reporting.

This transaction set may be used to convey a description of the material, receiving conditions and quantities, necessary contract information, and other logistics information. This transaction set is bi-directional between trading partners.

Implementation Notes

1. Managers use this transaction set to provide advance receipt information transactions to storage activities. For material being logistically reassigned, GIMs use this transaction set for delinquent due-in inquiries and due-in reconciliation inquiries to inquire to the LIM about the status of dues-in. LIMs use this transaction set for dues-in to transmit memorandum due-in information to the GIM and for delinquent due-in advice and due-in reconciliation advice to respond to GIM inquiries, and for delinquent due-in advice to provide revised EDDs to the GIM as they occur.
2. DoD distinguishes transactions as those from procurement sources and those from nonprocurement sources. In the 2/LIN/010 loop, use either 2/CS/20 or 2/N9/30 (but not both) to denote the material source. Use the CS segment to denote a procurement source; use the N9 segment to denote a nonprocurement source.
3. Use a single occurrence of this transaction set to transmit either due-in, advance receipt information, delinquent due-in inquiry, delinquent due-in advice, due-in reconciliation inquiry, or due-in reconciliation advice transactions to one activity. Use one occurrence of this transaction set to transmit a single or multiple transactions.
4. Each transaction within a transaction set may report, for a single stock or part number, one or more quantities distinguished by one or more characteristics; e.g., receiving location, material condition, etc.

	527	X12.231 Material Due-In and Receipt	

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9
------	-----	---	----------

Mandatory

Segment: BR Beginning Segment for Material Management

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of a material management transaction and to transmit identifying numbers and dates

- Syntax:**
1. C0504 — If BR05 is present, then BR04 is required.
 2. P0708 — If either BR07 or BR08 is present, then the other is required.
 3. P1011 — If either BR10 or BR11 is present, then the other is required.

- Semantic:**
1. BR03 is the date of the transaction set preparation.
 2. BR09 is the time of the transaction set preparation

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
BR01	353	Transaction Set Purpose Code Code identifying purpose of transaction set.	M ID 2/2
	00	Original	
	77	Simulation Exercise	
	Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>		

Mandatory

BR02	640	Transaction Type Code Code specifying the type of transaction.	M ID 2/2
	DA	Due-In	
	Code Value Implementation Note: <i>Managers use to establish due-in records.</i>		
	DE	Advance Receipt	
	Code Value Implementation Note: <i>Owners use to provide storage activities with advance receipt information.</i>		
	LC	Due-in Reconciliation Inquiry	
	Code Value Implementation Note: <i>GIMs use to initiate a reconciliation of all procurement source dues-in for logistically reassigned material which was not received.</i>		
	TI	Delinquent Due-in Advice	
	Code Value Implementation Note: <i>LIMs use to provide GIMs with due-in information in response to an inquiry and to provide revised EDDs as changes occur.</i>		
	TJ	Delinquent Due-in Inquiry	
	Code Value Implementation Note: <i>GIMs use to inquire to LIMs for information on delinquent procurement source dues-in.</i>		

TK Due-in Reconciliation Advice

Code Value Implementation Note:

LIMs use to respond to GIMs due-in reconciliation inquiries.

Mandatory	BR03	373	Date Date (YYMMDD).	M	DT	6/6
Implementation Note: <i>Express the originating activity's date in GMT.</i>						
Not Used	BR04	67	Identification Code	C	AN	2/20
Not Used	BR05	66	Identification Code Qualifier	O	ID	1/2
Not Used	BR06	306	Action Code	O	ID	1/2
Not Used	BR07	128	Reference Number Qualifier	C	ID	2/2
Not Used	BR08	127	Reference Number	C	AN	1/30
Required	BR09	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O	TM	4/8
Implementation Notes: 1. Express the originating activity's time in GMT. 2. Express time in a four-position (HHMM) format.						
Not Used	BR10	128	Reference Number Qualifier	C	ID	2/2
Not Used	BR11	127	Reference Number	C	AN	1/30

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 50

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Use this 1/LM/050 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 87) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/120 loop and specify the matching qualifier code in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/050 that does not apply to all the table 2 iterations. (Codes subject to override: 0, 83, 87, 93, 99, A1, AK, DE, DG, and EB.)

2. Do not use the 1/LM/050 loop when reversing a transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: LQ Industry Code

Level: Header

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3

Implementation Note:

Use either code 99 or A1 (but not both) for due-in and advance receipt information transactions only.

0 Document Identification Code

83 Supply Condition Code

Code Value Implementation Note:

Use to identify the material condition of the quantity cited in 2/RCD/040.

87 Subsistence Type of Pack Code

Code Value Implementation Note:

Use only in due-in and advance receipt information transaction for subsistence items.

93 Type of Storage Code

Code Value Implementation Note:

Use in advance receipt information transactions to indicate the manager's recommended type of storage space; otherwise, do not use.

99 Purpose Code

A1 Ownership Code

AK Distribution Code

DE Signal Code

DG Fund Code

EB Asset Transfer Status Code

Code Value Implementation Note:

Must use in delinquent due-in advice and due-in reconciliation advice transactions; otherwise do not use.

HD Discrepancy Status or Disposition Code

Code Value Implementation Note:

Use as needed to due-in and advance receipts to identify discrepant or deficient material.

Required

LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
------	------	--	-----------

Mandatory

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 20**Usage:** Mandatory**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code

- Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/070 loop will, as a minimum, cite the organization originating the transaction set and the organization to receive the transaction set.

2. Use this 1/N1/070 loop to indicate an organization when an N101 qualifier code (e.g., ZD) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/210 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/N101/070 that does not apply to all the table 2 iterations. (Codes subject to override: RC and ZD.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		RC Receiving Location	
		Code Value Implementation Note:	
		Use for advance receipt information transactions only to identify the receiving location.	
		ZD Party to Receive Reports	
		Code Value Implementation Note:	
		Use in advance receipt information transactions (except reversals) to indicate the organization to receive reports of receipt.	
		ZN Losing Inventory Manager	
		Code Value Implementation Note:	
		Use for delinquent due-in, due-in reconciliation inquiry, and due-in reconciliation advice transactions as appropriate to identify the LIM.	
		ZP Gaining Inventory Manager	
		Code Value Implementation Note:	
		Use for delinquent due-in, due-in reconciliation inquiry, and due-in reconciliation advice transactions to identify the GIM.	

Not Used	N102	93	Name	C	AN	1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C	ID	1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/070 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Mandatory

Segment: LIN Item Identification

Level: Detail

Loop: LIN **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use either the 2/CS/020 segment or the 2/N9/030 segment (but not both) for each 2/LIN/010 loop.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Optional

LIN01 350 Assigned Identification O AN 1/11
Alphanumeric characters assigned for differentiation within a transaction set.

Implementation Notes:

Must use the appropriate capitalized alphabetic code in each due-in and advanced receipt information transaction to identify the source of the material due-in; otherwise, do not use. Code T only applies when providing the GIM with memorandum due-in information.

1. A - Receipt to inventory as a result of purchase from commercial sources. Applicable only to procurement source transactions.
2. B - Receipt to inventory as a result of purchase or requisitioning from another DoD activity.
3. C - Receipt to inventory as a result of purchase or requisitioning from a non-DoD activity.
4. D - Receipt to inventory of assembled items, components from disassembled or reclaimed items, or converted or modified items, originally issued to a commercial or government activity for assembly, disassembly, reclamation, conversion, or modification. Applicable to both procurement and nonprocurement source transactions. Includes the return of government owned material furnished for incorporation in the deliverable item but not so incorporated (applicable to nonprocurement source transactions only).
5. E - Receipt to inventory of items previously issued to a commercial or government activity for repair or nondestructive test/evaluation.
6. F - Return to inventory of unused items originally issued to a commercial or government activity for destructive test/evaluation. Applicable only to nonprocurement source transactions.
7. G - Return to inventory of government owned material previously furnished to a commercial or government activity for consumption during the manufacturing or maintenance process, but not so consumed or expended. Applicable only to nonprocurement source transactions.
8. H - Return to inventory, from an authorized commercial or noncommercial activity, of material on loan. Includes the return of government owned equipment furnished to a commercial or noncommercial activity for use in performing a contract. Applicable only to nonprocurement source transactions.
9. I - Return to inventory from own Service/Agency users. Applicable only to nonprocurement source transactions.
10. J - Return to inventory from other DoD activity users. Applicable only to nonprocurement source transactions.
11. K - Return to inventory from non-DoD activity users. Applicable only to nonprocurement source transactions.
12. L - Return to inventory from MAP Grant Aid users. Applicable only to nonprocurement source transactions.
13. M - Return to inventory from FMS users. Applicable only to nonprocurement source transactions.
14. N - Return to inventory of material relocated between storage activities without change in ownership. Applicable only to nonprocurement source transactions.
15. P - Return to inventory from reutilization and marketing. Applicable only to nonprocurement source transactions.
16. Q - Return to inventory of designated principal item/weapon system. Applicable only to nonprocurement source transactions.
17. R - Return of Service/Agency designated item to inventory, when a like item is issued on an exchange basis. Applicable only to nonprocurement source transactions.
18. S - Return to inventory as a result of requisitioning from own Service/Agency. Applicable only to nonprocurement source transactions.
19. T - Memorandum notification from the LIM to the GIM of anticipated receipt or return to inventory which is scheduled to be logistically reassigned to the GIM when received.

Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
Implementation Notes:						
1. Use only one of codes A2, A4, FB, FS, FT, MG, or YP to properly identify the material.						
2. For procurement instrument source transactions, cite the purchased part number (code MG) in addition to the NSN.						
3. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE.						
A2 Department of Defense Identification Code (DoDIC)						
Code Value Implementation Note:						
Use to identify ammunition items.						
A4 Subsistence Identification Number						
Code Value Implementation Note:						
Use to identify subsistence items.						
FB Form Number						
Code Value Implementation Note:						
Use to identify the form stock number.						
FS National Stock Number						
Code Value Implementation Note:						
Must use the NSN when known. Must use for delinquent due-in inquiry and advice transactions, for due-in reconciliation inquiry and advice transactions, and whenever the LIN01 code value is T.						
MG Manufacturer's Part Number						
Code Value Implementation Note:						
Use to identify nonstandard material.						
YP Publication Number						
Code Value Implementation Note:						
Use to identify the publication stock number.						
ZB Commercial and Government Entity (CAGE) Code						
Code Value Implementation Note:						
Use only with code MG to identify a manufacturer's part number.						
Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40

Optional

Segment: CS Contract Summary

Level: Detail

Loop: LIN

Usage: Optional

Max Use: 1

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

Semantic: 1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.

2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.

3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.

4. CS14 is the Unit of Measure stipulated in the contract.

5. CS15 is the contract line item number (CLIN) unit price specified in the contract.

6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.

7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

Comments: 1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).

2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Must use for all procurement source transactions. Identifies the contract number (when awarded) or the procurement request number (when no contract has been awarded).

2. Must use either CS01 or CS06 (but not both).

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the contract number, when available.

Optional

CS02	327	Change Order Sequence Number Number assigned by the orderer identifying a specific change or revision to a previously transmitted transaction set.	O AN 1/8
------	-----	---	----------

Optional	Implementation Note: Use as needed to identify a modification number to the cited contract.				
	CS03	328	Release Number	O AN	1/30
			Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.		
Conditional	Implementation Note: Use as needed to identify the call or order number, or the call or order number including the respective call or order modification, as applicable.				
	CS04	128	Reference Number Qualifier	C ID	2/2
			Code qualifying the Reference Number.		
	Implementation Note: Use the appropriate code, based on the CS01 or CS06 information.				
		83	Extended (or Exhibit) Line Item Number (ELIN)		
			Code Value Implementation Note: Use to identify the ELIN, or the ELIN including the SUBELIN, as appropriate.		
		BV	Purchase Order Line Item Identifier (Buyer)		
			Code Value Implementation Note: Use to identify the PRLIN.		
		C7	Contract Line Item Number		
			Code Value Implementation Note: Use to identify the CLIN, or the CLIN including the SUBCLIN, as appropriate.		
Conditional	CS05	127	Reference Number	C AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.		
Optional	CS06	324	Purchase Order Number	O AN	1/22
			Identifying number for Purchase Order assigned by the orderer/purchaser.		
	Implementation Note: Use to identify the purchase request number for procurement source transactions when there is no contract award and no contract number assignment. Do not use with advance receipt information transactions. When using, do not use CS01, CS02, or CS03.				
Not Used	CS07	560	Special Services Code	O ID	2/10
Not Used	CS08	433	F.O.B. Point Code	O ID	2/2
Not Used	CS09	954	Percent	O R	1/10
Not Used	CS10	954	Percent	O R	1/10
Not Used	CS11	782	Monetary Amount	O R	1/15
Not Used	CS12	336	Terms Type Code	O ID	2/2
Not Used	CS13	560	Special Services Code	O ID	2/10
Not Used	CS14	355	Unit or Basis for Measurement Code	O ID	2/2
Not Used	CS15	212	Unit Price	O R	1/17
Not Used	CS16	336	Terms Type Code	O ID	2/2
Not Used	CS17	1073	Yes/No Condition or Response Code	O ID	1/1
Not Used	CS18	1073	Yes/No Condition or Response Code	O ID	1/1

Optional

Segment: N9 Reference Number

Level: Detail

Loop: LIN

Usage: Optional

Max Use: 10

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:

Must use for all nonprocurement source transactions to identify the transaction number.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory

Segment: RCD Receiving Conditions

Level: Detail

Loop: RCD **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To report receiving conditions and specify contested quantities

Syntax: 1. R020406 — At least one of RCD02, RCD04 or RCD06 is required.

2. P0203 — If either RCD02 or RCD03 is present, then the other is required.

3. P0405 — If either RCD04 or RCD05 is present, then the other is required.

4. P060708 — If either RCD06, RCD07 or RCD08 are present, then the others are required.

5. P091011 — If either RCD09, RCD10 or RCD11 are present, then the others are required.

6. P121314 — If either RCD12, RCD13 or RCD14 are present, then the others are required.

7. P151617 — If either RCD15, RCD16 or RCD17 are present, then the others are required.

8. P181920 — If either RCD18, RCD19 or RCD20 are present, then the others are required.

Semantic: 1. RCD01 is the receiving advice line item identification.

2. RCD21 is the cumulative quantity of goods received for a specific time period.

Comments: 1. See the Data Dictionary for a complete list of receiving condition ID's.

2. RCD06 through RCD20 provide for five (5) different quantities whose condition upon receipt is under question.

Implementation Notes:

1. Use in due-in, advance receipt information, delinquent due-in inquiry and response, and due-in reconciliation inquiry and response transactions to report multiple quantities distinguished by characteristics identified through DoD unique coded data cited in the 2/LM/120 loop.

2. Associate each iteration of the 2/RCD/040 loop with the item referenced in the 2/LIN/010 segment and the controlling number referenced in either the 2/CS/020 segment (for procurement source transactions) or the 2/N9/030 segment (for nonprocurement source transactions) and the assignment number cited in the 2/N9/090 segment.

3. For due-in transactions, use the 2/PTY/310 loop to stratify the RCD due-in quantity by receiving location, when desired. When the entire RCD quantity is due in to one location, specify the receiving location in the 2/N1/210 loop.

Data Element Summary

Not Used

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
RCD01	350	Assigned Identification	O AN 1/11

Required	RCD02	663	Quantity Units Received or Accepted Number of Units Received or Accepted	C	R	1/9
Implementation Notes:						
1. Use to indicate the total quantity due-in for the item identified in the 2/LIN/010 segment. For delinquent due-in inquiry and advice and due-in reconciliation inquiry and advice transactions, this is the open due-in quantity.						
2. Each quantity reported in the RCD segment must possess the same characteristics identified in the 2/RCD/040, 1/LM/050, and the 2/LM/120 loops. Should any characteristic differ (other than the receiving location for due-in transactions only), use a separate 2/RCD/040 loop.						
3. To reverse all or part of a due-in or advance receipt information transaction, use a minus sign in front of the quantity to be reversed (see data element discussion in volume 1, chapter 10). Do not reverse delinquent due-in inquiry and advice and due-in reconciliation inquiry and advice transactions.						
4. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.						
Required	RCD03	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	C	ID	2/2
Implementation Note: Use the unit of issue conversion table in volume 1, chapter 10.						
Not Used	RCD04	664	Quantity Units Returned	C	R	1/9

Optional

Segment: **G62** Date/Time

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

- Syntax: 1. R0103 — At least one of G6201 or G6203 is required.
2. P0102 — If either G6201 or G6202 is present, then the other is required.
3. P0304 — If either G6203 or G6204 is present, then the other is required.

Implementation Note:

Use multiple repetitions of this segment, as needed, to define unique dates associated with the transaction. Do not use when reversing a transaction.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
G6201	432	Date Qualifier	C	ID	2/2
		Code specifying type of date.			

Implementation Note:

For subsistence items, use either code 36 or BF (but not both), as appropriate for nonprocurement source due-in and advance receipt information transactions only; otherwise, do not use code 36 or BF.

17 Estimated Delivery Date

Code Value Implementation Note:

Use in each due-in, advance receipt information, delinquent due-in inquiry, and due-in reconciliation inquiry transaction, when known. Use with delinquent due-in advice and due-in reconciliation advice transactions only when providing a revised date.

BF Pack Date

Code Value Implementation Note:

Use to identify the date packed for subsistence items only.

BJ Shelf-Life Expiration

Code Value Implementation Note:

Use to indicate the expiration date for subsistence items only.

Required

G6202	373	Date	C	DT	6/6
		Date (YYMMDD).			

Not Used

G6203	176	Time Qualifier	C	ID	1/2
-------	-----	----------------	---	----	-----

Not Used

G6204	337	Time	C	TM	4/8
-------	-----	------	---	----	-----

Not Used

G6205	623	Time Code	O	ID	2/2
-------	-----	-----------	---	----	-----

Not Used

G6206	624	Century	O	N0	2/2
-------	-----	---------	---	----	-----

Optional

Segment: GF **Furnished Goods and Services**

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 1

Purpose: To specify information related to furnished material, equipment, property, information, and services.

Syntax: 1. P0102 — If either GF01 or GF02 is present, then the other is required.
2. P0506 — If either GF05 or GF06 is present, then the other is required.
3. P0809 — If either GF08 or GF09 is present, then the other is required.

Semantic: GF04 is the value of government-furnished property

Implementation Notes:

1. Use only with nonprocurement source due-in transactions. Do not use when reversing a transaction.
2. Use either the MDN or contract number (but not both) associated with a furnished material transaction to reference the associated contract. Identify the controlling transaction number in the 2/N9/030 segment.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Conditional	GF01	128	Reference Number Qualifier Code qualifying the Reference Number. W3 Manufacturing Directive Number	C	ID	2/2
Conditional	GF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Optional	GF03	367	Contract Number Contract number.	O	AN	1/30
Not Used	GF04	782	Monetary Amount	O	R	1/15
Not Used	GF05	128	Reference Number Qualifier	C	ID	2/2
Not Used	GF06	127	Reference Number	C	AN	1/30
Not Used	GF07	328	Release Number	O	AN	1/30
Not Used	GF08	128	Reference Number Qualifier	C	ID	2/2
Not Used	GF09	127	Reference Number	C	AN	1/30

Optional

Segment: DD Demand Detail

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 100

Purpose: To describe the type of demand and the intended use of material

Syntax: 1. C0201 — If DD02 is present, then DD01 is required.

2. P03040507 — If either DD03, DD04, DD05 or DD07 are present, then the others are required.

3. C0605 — If DD06 is present, then DD05 is required.

4. C1009 — If DD10 is present, then DD09 is required.

Semantic: DD08 transmits the stock level indicator. "Y" indicates that the material is normally carried in stock. "N" indicates that the material is not normally stocked

Implementation Notes:

1. Use in nonprocurement source due-in transactions only, to stratify the due-in quantity by the applicable weapon system. Use only when weapon system designator information was provided for the associated material return.

2. The sum of the individual quantities in DD07, reported by repetition of this segment, may not exceed the quantity reported in RCD02 of the 2/RCD/040 loop.

3. DD05 is always understood to be the Service/Agency Code. (See Volume 1, Chapter 10, Appendix 10G, DLMS code list 71.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	DD01	1271	Industry Code	C	AN	1/20
Not Used	DD02	1270	Code List Qualifier Code	O	ID	1/3
Required	DD03	128	Reference Number Qualifier Code qualifying the Reference Number.	C	ID	2/2
			W2 Weapon System Number			
			Code Value Implementation Note: Use to identify the applicable weapon system designator code.			
Required	DD04	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Required	DD05	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20
			Implementation Note: Use only to identify the Service associated with the weapon system designator code for the due-in quantity.			
Not Used	DD06	1270	Code List Qualifier Code	O	ID	1/3

Required	DD07	380	Quantity	C	R	1/15
			Numeric value of quantity.			

Implementation Notes:

1. Use to identify the quantity due-in for the weapon system designator code identified in DD04.
2. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.

Not Used	DD08	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	DD09	1271	Industry Code	C	AN	1/20
Not Used	DD10	1270	Code List Qualifier Code	O	ID	1/3

Optional

Segment: N9 Reference Number

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 5

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:

Use multiple repetitions as needed to define unique data associated with the transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N901	128	Reference Number Qualifier	M ID 2/2

Code qualifying the Reference Number.

16 Military Interdepartmental Purchase Request (MIPR) Number

Code Value Implementation Note:

Use as needed for ARI transactions to identify the MIPR number when tracking in-process maintenance; otherwise, do not use.

1Y Repair Action Number

Code Value Implementation Note:

Use as needed for ARI transactions to identify the DMISA line number when tracking in-process maintenance; otherwise, do not use.

A3 Assignment Number

Code Value Implementation Note:

Assign a sequential number to due-in and ARI transactions for each 2/RCD/040 loop iteration used with the controlling number identified either in the 2/CS/020 segment or the 2/N9/030 segment. In the first 2/RCD/040 loop iteration for a single controlling number, cite numeric 1; increase incrementally by one in each subsequent loop iteration for that controlling number. When reversing a due-in or ARI transaction, or inquiring about a delinquent due-in, always cite the previously assigned number in conjunction with the controlling number. Otherwise, do not use.

AH Agreement Number

Code Value Implementation Note:

Use as needed in ARI transactions to identify the DMISA number when tracking in-process maintenance; otherwise, do not use.

X9 Internal Control Number

Code Value Implementation Note:

For SMCA use only. Use with procurement source transactions when a transaction number is needed in addition to the contract number for transaction tracking purposes. Identify the controlling contract number in the 2/CS/020 segment.

Required	N902	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Not Used	N903	369	Free-form Description	C	AN	1/45
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Required

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** 25

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Must use the 2/LM/120 loop, if not using the 1/LM/050, for due-in, ARI, delinquent due-in inquiry and delinquent due-in advice transactions to identify the material condition.
2. For any specific table 2 iteration use this 2/LM/120 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/050 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/050 loop with a different DoD code in the 2/LM/120 loop when the same LQ01 qualifier is used in both loops, but the LQ02 DoD code is different. (Codes subject to override: 0, 83, 87, 93, 99, A1, AK, DE, DG, and EB.)
3. Do not use the 2/LM/120 loop when reversing a transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: **LQ** Industry Code

Level: Detail

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: **C0102** — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3

Implementation Note:

Use either code 99 or A1 (but not both) for each 2/RCD/040 loop for due-in and advance receipt information transactions only.

0 Document Identification Code

78 Project Code

Code Value Implementation Note:

Use, when available, in due-in and advance receipt information transactions only.

83 Supply Condition Code

Code Value Implementation Note:

Use to identify the material condition of the quantity cited in 2/RCD/040.

84 Management Code

Code Value Implementation Note:

Use in due-in and advance receipt information transactions only.

87 Subsistence Type of Pack Code

Code Value Implementation Note:

Use only in due-in and advance receipt information transaction for subsistence items.

93 Type of Storage Code

Code Value Implementation Note:

Use in advance receipt information transactions to indicate the manager's recommended type of storage space; otherwise, do not use.

99 Purpose Code

A1 Ownership Code

AJ Utilization Code

Code Value Implementation Note:

Use only with due-in transactions to identify QDR related transactions when the original requisition transaction number is not known (utilization code U applies); otherwise, do not use.

AK Distribution Code

DE Signal Code

DG Fund Code

EB Asset Transfer Status Code

Code Value Implementation Note:

Must use in delinquent due-in advice and due-in reconciliation advice transactions; otherwise, do not use.

HD Discrepancy Status or Disposition Code

Code Value Implementation Note:

Use as needed to due-in and advance receipts to identify discrepant or deficient material.

Optional

Segment: CS Contract Summary**Level:** Detail**Loop:** CS **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To provide information about a contract**Syntax:** P0405 — If either CS04 or CS05 is present, then the other is required.

- Semantic:**
1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.
 2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.
 3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.
 4. CS14 is the Unit of Measure stipulated in the contract.
 5. CS15 is the contract line item number (CLIN) unit price specified in the contract.
 6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.
 7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

- Comments:**
1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).
 2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Note:

Use the 2/CS/140 loop in procurement source advance receipt information transactions only. This loop provides selected contract data and MIL-STD-2073 preservation and packaging information to facilitate the receiving process and reduce the requirement for hard copy contracts at receiving storage activities. Do not use when reversing a transaction.

Optional

Segment: PO4 Item Physical Details

Level: Detail

Loop: CS

Usage: Optional

Max Use: 1

Purpose: To specify the physical qualities, packaging, weights and dimensions relating to the item.

- Syntax:**
1. P0203 — If either PO402 or PO403 is present, then the other is required.
 2. C0506 — If PO405 is present, then PO406 is required.
 3. P0607 — If either PO406 or PO407 is present, then the other is required.
 4. P0809 — If either PO408 or PO409 is present, then the other is required.
 5. C1013 — If PO410 is present, then PO413 is required.
 6. C1113 — If PO411 is present, then PO413 is required.
 7. C1213 — If PO412 is present, then PO413 is required.
 8. L13101112 — If PO413 is present, then at least one of PO410, PO411 or PO412 are required.

- Comments:**
1. PO403 - The "Unit of Measure Code" (Element #355) in this segment position is for purposes of defining the pack (PO401) /size (PO402) measure which indicates the quantity in the inner pack unit. Example: If the carton contains 24 12-Ounce packages, it would be described as follows: Element 356 = 24; Element 357 = 12; Element 355 = OZ.
 2. PO413 defines the unit of measure for PO410, PO411, and PO412.

Implementation Note:

Express PO410, PO411, and PO412 using the same unit of measure and define it in PO413.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	PO401	356	Pack	O	N0	1/6
Conditional	PO402	357	Size Size of supplier units in pack.	C	R	1/8
Implementation Note: Use to show the quantity of items in the unit pack. Express number as up to a 5-position whole number, followed by 2 decimal places.						
Conditional	PO403	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken PC Piece	C	ID	2/2
Not Used	PO404	103	Packaging Code	O	AN	3/5

Not Used	PO405	187	Weight Qualifier	O	ID	1/2
Not Used	PO406	384	Gross Weight per Pack	C	R	1/9
Not Used	PO407	355	Unit or Basis for Measurement Code	C	ID	2/2
Conditional	PO408	385	Gross Volume per Pack Numeric value of gross volume per pack.	C	R	1/9
Implementation Note: Use to identify the unit pack cube. Express number as up to a 4-position whole number followed by 3 decimal places. (See volume 1, chapter 10, Data Element Type discussion.)						
Conditional	PO409	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken CF Cubic Feet CI Cubic Inches CY Cubic Yard	C	ID	2/2
Optional	PO410	82	Length Largest horizontal dimension of an object measured when the object is in the upright position.	O	R	1/8
Implementation Notes: 1. Use to identify the length of the unit pack. 2. Express number as up to a 5-position whole number followed by 3 decimal places. (See volume 1, chapter 10, Data Element Type discussion.)						
Optional	PO411	189	Width Shorter measurement of the two horizontal dimensions measured with the object in the upright position.	O	R	1/8
Implementation Notes: 1. Use to identify the width of the unit pack. 2. Express number as up to a 5-position whole number followed by 3 decimal places. (See volume 1, chapter 10, Data Element Type discussion.)						
Optional	PO412	65	Height Vertical dimension of an object measured when the object is in the upright position.	O	R	1/8
Implementation Notes: 1. Use to identify the height or depth of the unit pack. 2. Express number as up to a 5-position whole number followed by 3 decimal places. (See volume 1, chapter 10, Data Element Type discussion.)						
Conditional	PO413	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken FT Foot IN Inch YD Yard	C	ID	2/2
Implementation Note: Use the unit of measure common to the designated unit pack length/width/height.						
Not Used	PO414	810	Inner Pack	O	N0	1/6

Optional

Segment: N9 Reference Number

Level: Detail

Loop: CS

Usage: Optional

Max Use: 5

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:
Use two repetitions, if required. The first repetition provides the special packaging instruction number, and date. The second repetition provides the special packaging instruction revision for use with the special packaging instruction number, and its date.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N901	128	Reference Number Qualifier Code qualifying the Reference Number. R1 Current Revision Number Code Value Implementation Note: Use to identify the special packaging instruction revision suffix, when applicable. W9 Special Packaging Instruction Number	M	ID	2/2
Required	N902	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369	Free-form Description	C	AN	1/45
Optional	N904	373	Date Date (YYMMDD).	O	DT	6/6
Implementation Note: Use to identify the date of the special packaging instruction or special packaging instruction revision.						
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Optional

Segment: G69 Line Item Detail - Description

Level: Detail

Loop: CS

Usage: Optional

Max Use: 5

Purpose: To describe an item in free-form format

Implementation Note:

Use only to provide essential preservation, packaging, and storage information which is not covered by the 2/LM/190 loop coded data. Use of this segment requires manual intervention to process the transaction.

Data Element Summary

Mandatory

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** 25

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

For any specific table 2 iteration use this 2/N1/210 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all the table 2 iterations and therefore was NOT indicated in the 1/N1/070 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them, or 3) to override an address in the 1/N1/070 loop with a different address specified in the 2/N1/210 loop when the same N101 qualifier is used in both loops, but the N104 address is different. (Codes subject to override: RC and ZD.)

Data Element Summary

Mandatory

N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	

Implementation Note:

Use codes C4, RM, SF, and SU in procurement source advance receipt information transactions only, and only when also using the 2/CS/140 loop.

C4 Contract Administration Office

RC Receiving Location

Code Value Implementation Note:

Use in due-in and advance receipt information transactions to identify the receiving location when the total due-in quantity referenced in the 2/RCD/040 loop is due-in to one location only; otherwise, do not use.

RM Party that remits payment

Code Value Implementation Note:

Use to identify the paying office.

SF Ship From

Code Value Implementation Note:

Use to identify the initial shipping activity.

SU Supplier/Manufacturer

Code Value Implementation Note:

Use to identify the material supplier.

ZD Party to Receive Reports

Code Value Implementation Note:

Use in advance receipt information transactions only to indicate the organization to receive reports of receipts only when that organization is different from the organization originating the transaction set.

Not Used	N102	93	Name	C	AN	1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) 33 Commercial and Government Entity (CAGE)	C	ID	1/2
			Code Value Implementation Note: Use with codes SU and SF only. Use with code SF only when a DoDAAC is not assigned.			
			M4 Department of Defense Routing Identifier Code (RIC)			
Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: REF **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Must use the 2/REF/250 loop to provide UIT information when the item identified in LIN03 of the 2/LIN/010 segment is subject to tracking under a NUIT or LUIT program. Use with due-in and advance receipt information transactions only.

2. Either a UIT or a lot number defines the looping structure. Once defined, use 2/N9/270 for the other characteristic, as needed.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2

LT Lot Number

Code Value Implementation Note:

Use to identify the manufacturer's lot number, batch number, or other number identifying the production run.

SE Serial Number

Code Value Implementation Note:

Use to cite the UIT assigned to the item for a NUIT or LUIT program.

Required

REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C AN 1/30

14 RECEIPT AND MATERIAL RECEIPT ACKNOWLEDGMENT

14.1 GENERAL

This chapter prescribes standard procedures for processing material receipt information between owners and storage activities and between LIMs and GIMs. The procedures require expeditious reflection of assets in the property accountability records and related financial accounts. Documentation covering consignment of material to storage activities is prescribed in other DoD and Service/Agency regulations. These documents are used, together with information developed by inspection and classification procedures, as source data for documenting transactions in terms of this manual. The distribution of disbursement, procurement, and transportation documentation by storage activities is also governed by existing regulations and is, therefore, not a consideration here.

This chapter also provides policy and procedures for a DoD closed-loop MRA system to provide accountability and monitor receipt of shipments of DoD and GSA wholesale stocks and DRMS stocks which are issued from onhand assets or procured for DVD.

For material receipt/return code definitions, see the implementation convention for the TS 527 IC - Receipt, Inquiry, Response and MRA (appendix 14A).

Use the TS 527 IC - Receipt, Inquiry, Response, and MRA as follows:

- Receiving activities use to report both receipts and historical receipt information to owners and other management control activities.
 - Receiving activities use to report bulk petroleum receipts to DFSC as prescribed by DoD 4140.25-M. This includes wholesale distribution system receipts from procurement instrument source or other than procurement instrument source and material returns, as well as retail receipts resulting from wholesale issues from onhand assets or DVD regardless of the method of delivery.
 - DFSPs use to report receipt of packaged petroleum additives to DFSC and to acknowledge the receipt to the supply source in accordance with the section 14.5 procedures.
 - Locations reporting to DFSC via direct communication or other means may be exempted from the above DLMS reporting requirements by DFSC in coordination with the Supply Process Review Committee Chair following full assessment of the costs and benefits.
- Owners use to inquire to receiving activities about the status of overdue receipts.
- Reporting activities use for MRA to acknowledge to the manager the receipt or nonreceipt of material.
- Managers use to inquire to the reporting activity when MRA is delinquent.

14.2 MATERIAL RECEIPT PROCESSING

Receiving activities will:

- Post receipts to the total item property record by changing or adding to data in the ARI

file established under the chapter 13, section 13.3 procedures, or by extracting data from the consignment documentation.

- For discrepant shipments, follow the guidelines provided in section 14.2.3.
- Follow Service/Agency guidance for identifying and classifying as SCC W those unserviceable returns which remain under contract warranty.

Receiving activities may reverse incorrect receipt transactions with TS 527 IC - Receipt, Inquiry, Response, and MRA.

Receipts from procurement can emanate from central procurement or local procurement actions. Authorized procurement delivery documents should accompany each shipment as prescribed in the Federal Acquisition Regulation.

When shipments of material received from procurement instrument sources require inspection and/or acceptance at destination, receiving storage activities will accomplish the inspection and/or acceptance and the incheck operations as concurrent actions. Receiving activities will:

- Inspect shelf-life material for appropriate condition and type of shelf-life code in accordance with applicable Service/Agency prescribed procedures based on DoD 4140.27-M. Inspect subsistence material for appropriate date packed/expiration date. Mark material, as appropriate, for shelf-life code and SCC upon receipt. Package markings will be in accordance with MIL-STD-129.
- Based on inspection, prepare a material receipt TS 527 IC - Receipt, Inquiry, Response, and MRA indicating the date inspected and the actual condition(s), by quantity, of the material received. Wholesale owners will make this date available to the office responsible for contractor payment for use in determining if an interest penalty applies.

14.2.1 TIME STANDARDS FOR PROCESSING RECEIPTS

DoD measures wholesale activity receipt processing performance in terms of the goal to process receipts and reflect them with minimal delay as onhand assets available for issue. Recording asset receipts and making asset records visible from the point of inspection and/or acceptance normally shall be accomplished within 24 hours (holidays and weekends excepted) as prescribed in DoD 4140.1-R. One objective of the DLMS is to process receipts through the receiving activity, irrespective of geographical location, and reflect them on both the accountable and locator records with minimal delay. For this objective, there are two segments of receipt processing :

- Date material is turned over by the carrier to the designated receiving activity to date of posting to the total item property record.
- Date material is turned over by the carrier to the designated receiving activity to date when storage location/proof of storage is posted in the receiving activity's records. Material is considered to be in storage when it reaches the first location (either temporary or permanent) where actual storage control exists through locator data and the material can be issued in response to material release documentation.

Performance standards for processing receipts through these time segments are as follows:

- Process receipts from new procurement through segments one and two within 7 calendar

days.

- Process all other receipts through segments one and two within 10 calendar days.

Report wholesale activity receipt processing effectiveness in the ICE Report, RCS DD-P&L (Q&SA) 935, as prescribed by the chapter 7, Physical Inventory Control procedures. When computing the overall performance against the time standard, include receipt transactions frustrated for a long period of time prior to posting, storing, or reporting.

14.2.2 CONTROL OF RECEIPTS

Receiving storage activities will comply with the following requirements:

- Establish receipt control procedures for posting information relating to the status of material in the storing cycle. The cycle begins when the carrier offers material to the receiving activity for custody and control. Accordingly, receiving activities shall record the carrier's date offered when different than the date the carrier released the material. The Services/Agencies may use the carrier's date offered to measure carrier performance.
- Accomplish the following actions after the material has been physically received but prior to or concurrent with movement to storage:
 - Establish a transaction suspense record to record the material as an in-process receipt.
 - Prepare and transmit the TS 527 IC - Receipt, Inquiry, Response, and MRA to the owner within 24 hours (holidays and weekends excepted) from the point of inspection and/or acceptance.
- When the onhand balance of the stock record (physically stored) is not sufficient to fill material release orders, use in-process receipts to fully or partially satisfy the requirement as directed by the inventory manager in accordance with DoD 4140.1-R.
- Periodically refer to the in-process receipt suspense file to expedite the storage of material delayed beyond authorized receipt processing timeframes and to expedite the storing of material for which issues have been deferred pending storage.
- After receiving proof of storage, clear the suspense record, update the storage locator record, and release any deferred issues.
- As an additional aid in control of receipts, ensure that appropriate storage activity records (e.g., stock locator) reflect the date of the last receipt of an item and the storage information (i.e., date of storage or some other code indicating that storage has been reported).

14.2.3 DISCREPANT/DEFICIENT RECEIPTS

14.2.3.1 SUBMITTING REPORTS OF DISCREPANT/DEFICIENT RECEIPTS

In addition to processing and reporting material receipts, receiving storage activities will submit reports for all discrepant/deficient receipts in accordance with the chapter 18 discrepancy reporting procedures and the following regulations:

- Joint Regulation AR55-38/NAVSUPINST 4610.33/AFR 75-18/MCO P4610.19/DLAR 4500.15.
- Joint Regulation DLAR 4155.24/AR 702-7/SECNAVINST 4855.5/AFR 74-6.
- Joint Regulation DLAR 4155.3/AR 30-12/NAVSUPINST 4355.2/AFR 74-5/MCO 10110.21.
- Other DoD and joint or intra-Service/Agency regulations governing discrepancies/deficiencies not covered by the above.

Neither the dollar value nor the timeframes for submitting discrepancy/deficiency reports apply for reporting the material receipt to the cognizant owner. The receipt reporting timeframes are prescribed by section 14.2.1. The procedures for reporting receipt of discrepant/deficient shipments to the owner are prescribed by section 14.2.3.2.

14.2.3.2 PROCESSING DISCREPANT/DEFICIENT RECEIPTS

Upon receipt of all incoming material shipments, from procurement instrument and nonprocurement instrument sources, receiving activities will research all available documentation and item markings (i.e., transaction or contract number, NSN or other item identification number, ARI file, quantity, condition, inspection/acceptance requirements, etc.) to determine the receipt data. Using this data, receiving activities will determine if a discrepancy/deficiency (hereafter referred to as discrepancy or discrepant) exists and will identify its nature.

If unusual circumstances prevent normal receipt reporting of discrepant shipments, the receiving activity will communicate with the manager or CAO/PO to determine how to submit the discrepancy report and report the receipt. When the owner delays receipt reporting, the receiving activity must control the receipt by physically segregating and monitoring the status of the material until they report the receipt, or the owner directs other disposition (e.g. reshipment, return to shipper, etc.). This paragraph applies only when circumstances exist which prevent normal receipt reporting.

Not all discrepant receipts require submission of discrepancy reports. Receiving activities will follow the section 14.2.3.1. procedures to determine whether a discrepancy report must be submitted. Use TS 527 IC - Receipt, Inquiry, Response, and MRA with Management Codes AR, AS, and AU to identify discrepant receipts which require submission of a discrepancy report. The purpose of the discrepant receipt management codes is to notify the owner in advance that a receipt was discrepant and that a discrepancy report is being submitted which will provide additional information relating to the reported item. Never issue a TS 527 IC - Receipt, Inquiry, Response, and MRA with Management Codes AR, AS, or AU for a discrepant quantity when submission of a discrepancy report is not required. Additionally, use Management Codes AS and AU only for procurement instrument source receipts to identify vendor caused misdirected shipments and contract overshipments. Separate codes apply for these discrepancies, which occur more frequently and are more easily resolved than others, so owners can initiate immediate corrective action before the formal report of discrepancy is received.

14.2.3.2.1

RECEIPTS LACKING DOCUMENTATION

When material arrives without accompanying documentation, or with inadequate documentation to process the receipt, receiving activities will use one of the following data sources to develop material receipt transactions:

- ARI files.
- Authorized procurement delivery documents and vendor packing lists.
- Advance copies of DD Forms I348-I, or DD Forms II49.
- Transportation and fiscal records.
- Container markings.
- Advice provided by the owner, the shipper, or the U.S. Customs Inspector's Office upon request of the receiving activity if receipt documentation cannot otherwise be developed.

Normally when receiving activities retain a discrepant receipt in U.S. Government custody, whether or not it is U.S. Government-owned, they will post the receipt to the Total Item Property Record, store the material and update the locator record, and hold the material pending receipt of disposition from the cognizant owner.

14.2.3.2.2

RECEIPTS FROM OUTSIDE THE NORMAL DISTRIBUTION SYSTEM

When storage activities report receipts outside the normal distribution system for the NSN, the owner will record the receipt so assets are issued from that site first. Owners will effect disposition of such material as quickly as possible. If the material is not issuable, the owner will direct repair induction, reclassification, relocation, or disposal using the appropriate DLMS transaction.

14.2.3.2.3

DISCREPANT RECEIPT - PROCUREMENT INSTRUMENT SOURCE - GENERAL

Procurement discrepancies, discrepancies imposing a health/safety hazard, classified risk, etc., may require separate and/or secure storage. When these situations exist, receiving activities will take protective measures in accordance with established DoD or Service/ Agency procedures.

Services/Agencies will provide using activities and wholesale storage activities the necessary guidance for determining which unserviceable, reparable assets are covered by a contract warranty.

When acceptance is accomplished at a point other than destination, receiving activities may not reinspect supplies at destination for acceptance purposes. However, receiving activities will examine such supplies at destination for identity, damage in transit, quantity, condition (including proper packing/packaging and labeling) and, for subsistence material, date packed and expiration date. The U.S. Government's right to litigate a discrepant receipt is not affected by the point of acceptance. Consequently, receiving activities will report discrepancies detected during the destination examination in accordance with the regulations cited in section 14.2.3.1.

Shipment of procurement instrument source receipts directly to reutilization and marketing is not authorized unless unusual circumstances (e.g., health or safety hazard, etc.) exist and separate/secure storage facilities are not available. When unusual circumstances require the receiving activity to ship material directly to the reutilization and marketing activity (or take other disposal actions as prescribed by the Services/Agencies), the receiving activity will first report the receipt using TS 527 IC - Receipt, Inquiry, Response, and MRA citing SCC L and Management Code AR. The disposal action will then be reported using a dual inventory adjustment transaction TS 527 IC - Receipt, Inquiry, Response, and MRA citing SCC H and Management Code AM or AT.

14.2.3.2.4 REPORTING DISCREPANT RECEIPTS FROM PROCUREMENT INSTRUMENT SOURCE

Receiving activities will follow these procedures to report receipt of discrepant shipments from procurement instrument sources. Unless otherwise allowed by these procedures, report discrepant shipments from a procurement instrument source to the owner with TS 527 IC - Receipt, Inquiry, Response, and MRA citing SCC L for the discrepant quantity. With the exception of the receipt of incorrect items, use a single TS 527 IC - Receipt, Inquiry, Response, and MRA to report the receipt showing both nondiscrepant and discrepant quantities in their appropriate SCC. The following discrepancy categories are not mutually exclusive; multiple discrepancy conditions may exist for a single receipt transaction:

- Condition of Material. Report the actual discrepant quantity in SCC L , or if the item is a repairable under warranty, in SCC W.
- Supply Documentation. Absence of the supply documentation should not preclude receipt processing and reporting or subsequent issue of the material. Research in accordance with section 14.2.3.2.1. to report the receipt. The section 14.2.3.1 discrepancy reporting requirements still apply.
- Misdirected Shipments (improperly addressed by the procurement instrument source). Contact the cognizant owner to ensure compliance with the procurement requirements (i.e., inspection, acceptance, etc.). Report the total quantity in the actual condition received (normally A) with TS 527 IC - Receipt, Inquiry, Response, and MRA and enter Management Code AS. Upon receipt of the receipt transaction, and prior to posting the receipt as available for issue, owners will initiate immediate action to resolve the discrepancy (see section 14.2.3.3.). If the owner or CAO/PO directs reshipment/return of a reported receipt without issuing material release documentation, the receiving activity will submit a reversal TS 527 IC - Receipt, Inquiry, Response, and MRA of the previously submitted material receipt transaction.
- Overage/Duplicate Shipment. Research the ARI file, receipt, and contract documentation to determine the discrepant quantity. Report confirmed duplicate shipments as discrepant with TS 527 IC - Receipt, Inquiry, Response, and MRA using SCC L. When overages are valued above the contract variance clause, or above the excess delivery clause (after considering any allowable variance), report the overage above the allowable variance with TS 527 IC - Receipt, Inquiry, Response, and MRA as discrepant in SCC L and cite Management Code AU. Owners will initiate immediate action to resolve the discrepancy upon receipt of the receipt transaction (see section 14.2.3.3.). Overages within the allowable variance or within the excess delivery clause (after considering any allowable variance) are not discrepant. Report the total quantity in the applicable condition, and do not cite a discrepant receipt management code for that quantity.

- Packaging Discrepancy. Report the total discrepant quantity with TS 527 IC - Receipt, Inquiry, Response, and MRA using SCC L. The owner and/or the CAO/PO will determine whether litigation is required. If litigation is not required the owner will initiate TS 527 IC - Receipt, Inquiry, Response, and MRA to request the transfer of the suspended assets to the appropriate condition.
- Shortages/Nonreceipt of Material. Research the ARI file, receipt, and contract documentation to determine the discrepant quantity. For shortages, report the total quantity in the condition received. Except for shortages attributed to transportation discrepancies, the receipt is discrepant only if the shortage exceeds the allowable contract variance. Nonreceipts are addressed under section 14.3.
- Item Technical Data Marking (includes nameplates, logbooks, operating handbooks, special instructions, etc.). Report the discrepant quantity with a TS 527 IC - Receipt, Inquiry, Response, and MRA using SCC L, and identify and describe the specific technical data discrepancy in the SF 364 or TS 842 IC - Nonconformance Report for owner evaluation. If the owner determines the assets can be issued, the owner will initiate TS 527 IC - Receipt, Inquiry, Response, and MRA to transfer the suspended assets to the appropriate condition.
- Wrong Item. Report any assets in the shipment which are the correct item in the applicable condition and do not cite the discrepant receipt management code for that quantity. Report in TS 527 IC - Receipt, Inquiry, Response, and MRA the total quantity of the incorrect item received using SCC L using a separate receipt transaction. If the majority of the assets are the incorrect item, the receiving activity may report the total quantity in SCC L based on internal Service/Agency procedure.
- Product Quality Deficiency. It is normally preferable to retain custody of the material, whether or not it has been accepted. Report the deficient quantity using TS 527 IC - Receipt, Inquiry, Response, and MRA with SCC Q. The owner or CAO/PO will determine if litigation or informal action with the procurement instrument source should be initiated. The owner will take action to transfer the assets.
- Transportation Discrepancies. When material is accepted by the Transportation Officer, process and report the receipt using TS 527 IC - Receipt, Inquiry, Response, and MRA in accordance with procedures cited above for the type of discrepancy which exists (e.g., condition of material for damage, etc.).
- Receipts Not Due-In (no ARI file exists).
 - Except for receipt of logistically reassigned items, see guidance in this section for processing receipts of misdirected shipments and overages/duplicate shipments, for which an ARI file is not normally available.
 - For logistically reassigned items, research all available documentation and item markings to determine proper routing of the receipt. If unable to determine the correct routing, contact the cognizant item manager who will direct the appropriate routing of the receipt. If the cognizant item manager (i.e., the GIM) does not have a recorded due-in, did not initiate the procurement action and/or has a record of a memorandum due-in, and the item was involved in an LR, the GIM should instruct the storage activity to report the receipt to the LIM.

- Other Discrepancies. Receipt reporting will depend upon the type of discrepancy involved. When unusual circumstances exist, the receiving activity may need to obtain guidance from the appropriate authority before reporting the receipt or submitting discrepancy report. See section 14.2.3.2. for storage and accountability requirements.

14.2.3.2.5 DISCREPANT RECEIPT - OTHER THAN PROCUREMENT INSTRUMENT SOURCE - GENERAL

When a receipt cannot initially be identified to an NSN, the receiving activity will attempt to identify the NSN or usage by following the section 14.2.3.2.1. procedures and report the receipt to the cognizant owner.

- If the NSN cannot be identified and the estimated value of the item is under \$100, receiving activities will not report the receipt to an owner. Ship the material directly to reutilization and marketing using a local document number. Retain an accessible record of the transaction document and its backup for 2 years.
- If the NSN cannot be identified and the estimated value of the item is \$100 or more, the receiving activity will contact the manager of like items to determine disposition. If GSA is the manager of like items, process in accordance with the procedures for receipts not due-in prescribed in section 14.2.3.2.6. If the manager of like items can identify the NSN, they will direct the receiving activity to submit the TS 527 IC - Receipt, Inquiry, Response, and MRA receipt and SF 364 to the cognizant owner. If the manager of like items cannot identify the NSN, they will provide disposition instructions to the reporting activity. These instructions will include an item identification number (part number, etc.) for reporting the receipt and submitting the SF 364. If the owner directs shipment to reutilization and marketing, the owner will maintain an accessible record of the transaction and its backup for 2 years.

Unless otherwise allowed by these procedures, receiving activities will report receipts of discrepant shipments from a nonprocurement instrument source to the owner. For discrepant quantities, use TS 527 IC - Receipt, Inquiry, Response, and MRA and cite the SCC which most accurately describes the condition of the material. Classify and report the material using TS 527 IC - Receipt, Inquiry, Response, and MRA with SCC K when the actual condition cannot be determined. Include discrepant receipt Management Code AR when a discrepancy report is required.

14.2.3.2.6 REPORTING DISCREPANT RECEIPTS - OTHER THAN PROCUREMENT INSTRUMENT SOURCE

Receiving activities will follow these procedures to report receipt of discrepant shipments from nonprocurement instrument source. With the exception of the receipt of wrong items, use a single TS 527 IC - Receipt, Inquiry, Response, and MRA to report the receipt showing both nondiscrepant and discrepant quantities in their appropriate SCC. The following discrepancy categories are not mutually exclusive; multiple discrepancy conditions may exist for a single receipt transaction:

- Condition of Material.
 - When inspection of inter-Service/Agency receipts reveals material to be SCC H and no ARI file exists, automatically ship discrepant material valued at less than \$100 per item direct to the reutilization and marketing activity or take other

automatic disposal action based on criteria promulgated by the Services/Agencies. This includes expired Type I shelf-life material, including subsistence, regardless of value. When taking automatic disposal action, use TS 527 IC - Receipt, Inquiry, Response, and MRA and cite SCC H and Management Code AM or AT, in addition to the discrepant receipt management code, in the receipt transaction for the discrepant quantity. To establish an audit trail when material is condemned upon receipt and shipped directly to reutilization and marketing, cite the disposal turn-in transaction number in the receipt transaction in addition to the original transaction number.

- Report discrepant quantities other than those mentioned above using TS 527 IC - Receipt, Inquiry, Response, and MRA citing the applicable SCC, or SCC K when the condition cannot be determined.
- Supply Documentation. Absence of the supply documentation should not preclude receipt processing and reporting or subsequent issue of the material. Research in accordance with section 14.2.3.2.1 to report the receipt. Discrepancy reporting requirements still apply.
- Misdirected Shipments (improperly addressed by the supply activity). Report misdirected shipments as receipts to the cognizant owner. Owners will effect disposition using the TS 527 IC - Receipt, Inquiry, Response, and MRA.
- Overage. Report the total quantity received in the applicable condition.
- Packaging Discrepancy. Report the total quantity received in the applicable condition and schedule the discrepant quantity for preservation/packaging in accordance with Service/Agency criteria.
- Shortages/Nonreceipt of Material. For shortages, report the total quantity received in the applicable condition. The owner will initiate any necessary financial adjustment action. Nonreceipts are addressed under section 14.3.
- Item Technical Data Marking (includes nameplates, logbooks, operating handbooks, special instructions, etc.). Report the discrepant quantity in TS 527 IC - Receipt, Inquiry, Response, and MRA using SCC D. Identify and describe the specific technical data discrepancy in the SF 364 for owner evaluation. If the owner determines the asset can be issued, the owner will initiate action to transfer the asset to the appropriate condition.
- Wrong Item. Report receipt of the total quantity of the incorrect item in the applicable condition citing the NSN of the incorrect item received and the discrepant receipt management code for the quantity. If both correct and incorrect items are received in the same shipment, submit a separate receipt transaction for the correct item.
- Product Quality Deficiency. SCC Q entered in an ARI file indicates that the receipt is related to a reported product quality deficiency. Report receipt of this material in SCC Q and do not cite a discrepant receipt management code. Based on the results of the inspection or technical/engineering analysis, owners will direct the appropriate material disposition.
- Transportation Discrepancies. When the Transportation Officer turns the material over, report the receipt in accordance with the procedures cited above for the type of discrepancy which exists (e.g., condition of material for damage etc.).

- Receipts Not Due-In (no ARI file).
 - GSA Managed Items. GSA does not normally authorize return of assets to DoD storage activities. Receipts not due-in are, therefore, considered DoD owned assets which have not been reported to GSA under the material returns program. The DoD Components shall establish internal procedures for recording these assets on a storage activity record and an owner record within the Component for subsequent issue, excess reporting under the material returns program, or release for reutilization and marketing.
 - DoD Managed Repairable Items. Report receipt to the manager of the shipping Service by TS 527 IC - Receipt, Inquiry, Response, and MRA using applicable condition Reason for Material Receipt/Return Code I. Do not include a discrepant receipt management code in the transaction. For material shipped between wholesale storage activities, report the receipt citing Reason for Material Receipt/Return Code N. Manager's receiving transactions reporting returns not-due-in of phase II repairables, for which they are not the IMM, shall follow the material returns program procedures to report/ship the material as prescribed by the IMM.
 - DoD Managed Consumable Items. Report receipt to the IMM in the applicable condition and do not include a discrepant receipt management code in the transaction. However, Services may prescribe reporting to their own item manager for returns from their own Service activities.
- Other Discrepancies. Receipt reporting will depend upon the type of discrepancy involved. When unusual circumstances exist, the receiving activity may need to obtain guidance from the owner before reporting the receipt or submitting the discrepancy report. See section 14.2.3.2 for storage and accountability requirements.

14.2.3.3 RESOLUTION OF REPORTED RECEIPT DISCREPANCIES

Owners will maintain accurate material accountability records and audit trails for reported receipts with evidence of a supply discrepancy. Resolution of these discrepancies requires the establishment of interfaces among the material accountability, procurement, financial accounting, and discrepancy reporting systems.

When discrepant receipts are reported, owners will process the transactions and effect the research required to resolve the discrepancy. When material received from a procurement instrument source will be retained in the wholesale inventory, coordinate with the CAO/PO for a contract modification which will recoup any administrative costs and any additional second destination transportation costs or onward shipment (redistribution) costs incurred by the U.S. Government as a result of the discrepancy. For all receipt discrepancies, ensure that procurement/supply due-in records and related financial accounts (including intransit) are corrected to reflect any new receipt status and transmit updates to ARI to the storage activity(ies) involved, as required. Care must be taken, however, to suppress ARI transaction output if the corresponding receipt has already been reported (e.g., for overages or misdirected shipments being retained where delivered).

Owners will develop management evaluation data for contract overages and vendor caused misdirected shipments for use in identifying trends or indications of system problems and in initiating corrective action. When the same discrepancy is repeatedly reported on shipments from a given procurement instrument source, the owner through the CAO/PO will advise the

source of the error and request action be taken to correct its repeated occurrence. When a procurement instrument source continues to commit the same error, initiate action to consider inclusion on the Awards Review List or other disciplinary action.

14.2.4 MAINTAINING ACCOUNTABILITY DURING MAINTENANCE ACTIONS

When responsibility for maintaining the property accountability record for DoD-owned property has been assigned to an activity(ies) other than the owner, the responsible activity shall execute the owner's actions set forth in this section.

These procedures apply for returns to inventory including unused material, relocations of material for maintenance, and receipts from assembly, disassembly, reclamation, conversion, modification, repair and destructive or nondestructive test/evaluation consigned by DoD, other Government (non-DoD) Agency, or commercial activities.

These procedures exclude repair and return material owned below the wholesale distribution system; however, storage activities will internally maintain visibility of such material when system capability permits.

Receiving storage activities shall report receipt of reparable material based on the information contained in the ARI file. If an ARI file is not available, report the receipt in accordance with section 14.2.3.2.6. procedures for processing receipts not due-in for reparable items.

When material is scheduled for organic maintenance by DMISA or other inter-Service/ Agency agreement, the agreement shall specify the property accountability and material control requirements. The agreement shall also specify whether the storage activity will report returns from maintenance to the owner (Principal) as receipts under this chapter, or as transfers from SCC M under the chapter 8 inventory adjustment procedures.

Each Service/Agency shall insure that:

- Owned inventory which is in the hands of DoD, other Government (non-DoD), and commercial activities is properly accounted for under the provisions of chapters 7 (physical inventory control), 8 (inventory adjustments), 14 (material receipt), and 15 (material issue) of this manual and, for commercial maintenance, the provisions of the FAR. This includes returns from field activities for repair and reissue as wholesale inventory. Services/Agencies shall prescribe use of any required internal codes to meet this requirement. (Responsibility of the owner (Principal for maintenance by DMISA).)
- Property accountability records for material in the hands of maintenance activities are maintained and adjusted based on the value of material actually returned and will support the DoD 7220.9-M accounting and reconciliation requirements. (Responsibility of the owner (Principal for maintenance by DMISA).)
- Contracts for commercial maintenance require the commercial activity to report or acknowledge receipt and report shipment or condemnation of material to the contracting officer. (Responsibility of the Agent for maintenance by DMISA.)
- Any needed interface between the procurement and supply operations/functions exists to assure that reported data is transmitted to the owner. (Responsibility of the Agent for maintenance by DMISA.) Arrangements may be made for commercial activities to report directly to the contracting officer and/or the owner using DLMS transactions. Reported data affecting inventory balances is recorded in property accountability/ visibility records.

(Responsibility of the owner (Principal for maintenance by DMISA).)

Owners shall establish due-in records for expected returns from commercial and Government maintenance activities and provide ARI to the storage activities to receive the material under the chapter 13 procedures. Storage activities shall report receipts under section 14.2.

When material is issued to a customer directly from a commercial activity, assure that a wash-post receipt from maintenance and issue to the customer are processed to establish the property accountability and financial accounting audit trails.

When material is condemned by maintenance activities, assure that the condemnation is recorded to adjust the DoD inventory and financial accounts.

14.2.5 RECLAIMED ITEMS

When reclamation activities do not have adequate facilities to test and classify the serviceability condition of reclaimed assets, they will identify such assets with TS 527 IC - Receipt, Inquiry, Response, and MRA citing SCC R (Suspended Reclaimed Items Awaiting Condition Determination). When receiving storage activities determine that immediate classification of such SCC R assets is not possible, they will ensure that the assets are checked/tested and classified to actual condition within established parameters.

When reclamation activities cite an actual SCC (i.e., other than R) for returned material, storage activities will cite that condition code when recording and reporting the receipt. However, if inspection upon receipt reveals that the condition assigned by the reclamation activity is incorrect, the storage activity will record and report the receipt citing the actual condition to which the item is classified or SCC K if the actual condition cannot be determined. Classify material reported in SCC K to the actual condition within established parameters.

14.2.6 LOANED MATERIAL

Receiving activities will inspect loaned material upon receipt. Submit a TS 527 IC - Receipt, Inquiry, Response, and MRA, in accordance with section 14.2 citing Reason for Material Receipt/Return Code H, to provide information about the condition and quantity of the returned loaned material.

The owner is responsible for final determination and resolution of returned Government property from loan. Establish controls to ensure the material is returned in an appropriate condition, i.e., as good as or better than the condition of the original loan issue. Take appropriate action to resolve any discrepancies and ensure reimbursement to the loaning activity.

14.2.7 LOGISTICS REASSIGNMENT RECEIPT PROCESSING AFTER ETD

The storage activity will process procurement instrument source receipts for LR material received after 1 year past the ETD, in the same manner that they process procurement instrument source receipts received during the ETD to 1 year period.

For receipt of material which has been logistically reassigned, after the ETD, the receiving storage activity will:

- Report receipts of items which have ARI files, in accordance with section 14.2.
- Report procurement instrument source receipts for which there is no ARI file in

accordance with the section 14.2.3.2.4. guidance for processing receipts not due-in.

- Report nonprocurement instrument receipts for which there is no ARI file in accordance with the section 14.2.3.2.6. guidance for processing receipts not due-in.

The LIM will:

- Process the storage activity initiated TS 527 IC - Receipt, Inquiry, Response, and MRA to reduce the due-in record and record assets on the owner record for the quantity received.
- Process the associated logistics transfer/decapitalization transaction, adjustment transaction, and LR storage ownership transfer transaction in accordance with the chapter 10 LR procedures.
- For material received for which litigation is required, record assets on the LIM owner record in SCC L and reduce the due-in record. At this time, no action will be taken by the LIM to remove or change the GIM's memorandum due-in. When the litigation proceedings are completed and the material is reclassified to an issuable condition, process the associated adjustment transaction and LR transfer/decapitalization transactions in accordance with the chapter 10 LR procedures. In the event material is returned to the contractor due to litigation proceedings notify the GIM in accordance with the chapter 10 LR procedures. The LIM must take appropriate action to reestablish a due-in, in accordance with chapter 13 procedures, if the material being returned to the contractor for deficiency correction will eventually be returned to the LIM.

If a procurement instrument source receipt for an LR item is incorrectly reported to the LIM or the GIM, and the LIM or GIM does not have a recorded due-in, did not initiate the procurement action, and/or has a record of a due-in or memorandum due-in and is able to determine the appropriate reporting for the receipt, the LIM or GIM should reject the receipt back to the initiator using TS 527 IC - Receipt, Inquiry, Response, and MRA and citing Reject Advice Code AB.

14.3 INQUIRY ON MATERIAL RECEIPT

When a maximum of 45 calendar days have elapsed since the shipping date indicated in shipment notification and receipt of the total quantity has not been reported, the owner shall submit a TS 527 IC - Receipt, Inquiry, and Response, and MRA for information on the intransit quantity(ies) to the storage activity(ies) designated to receive the material. (Extension of the 45 day calendar timeframe is authorized when long intransit times are involved.) Where direct communication with the storage facility is available, DFSC will perform this function using the missing transaction notice prescribed by DoD 4140.25-M.

When the storage activity response indicates that the material has not been received, initiate any shipment tracer and/or discrepancy reports required under the procedures cited in section 14.2.3.1. Coordinate with the CAO/PO for intransit contract receipts.

Storage activities will submit shipment tracers and discrepancy reports for material not received as indicated in Service/Agency implementing procedures or when directed to do so by the owner.

14.4 RESPONSE TO INQUIRY ON MATERIAL RECEIPT

When material has been received, storage activities will respond with a TS 527 IC - Receipt, Inquiry, Response, and MRA. If a receipt was previously submitted, the storage activity will submit a duplicate receipt transaction citing the TS 527 IC - Receipt, Inquiry, Response, and MRA.

When material has not been received, storage activities will reply with a response using the TS 527 IC - Receipt, Inquiry, and Response.

14.5 MATERIAL RECEIPT ACKNOWLEDGMENT

This section provides policy and procedures for a DoD automated, closed-loop system to provide accountability and monitor receipt of shipments of DoD and GSA wholesale stocks and DRMS stocks which are issued from onhand assets or procured for DVD. These procedures provide for the interface among the transportation, quality, supply, and financial operations/systems below the wholesale level and between the supply and purchasing operations/systems at the wholesale level to provide proper control over intransit assets and document receipt in the payment files.

14.5.1 APPLICABILITY

These procedures apply to shipments of DoD wholesale stocks and DRMS stocks and, in part, to shipments of GSA wholesale stocks--whether pushed or pulled, delivered or picked up, issued from onhand assets or procured for DVD from commercial sources. These procedures apply to:

- All DoD wholesale managers and the DRMS. For the purposes of material receipt acknowledgment, the DRMS is the DoD manager for shipments from reutilization and marketing.
- Recipients of DoD and GSA wholesale stocks and DRMS stocks--including DoD intermediate/retail level and end use activities; contractors which receive GFM, as defined under DoD 4140.1-R; DoD ICPs which requisition material from GSA, DRMS, or other DoD ICPs; and DoD maintenance facilities which receive items for maintenance when the maintenance activity accountable officer assumes property accountability for the inducted items--hereafter called reporting activities.

GSA will not use the MRA to monitor material receipt but will use the data to interface with the discrepancy reporting process. Therefore, GSA will not follow up to reporting activities to request an MRA.

Services and Agencies may prescribe additional internal followup requirements to those identified in this chapter.

14.5.2 EXCLUSIONS

The following excludes from MRA procedures:

- Commodities excluded from requisitioning, except that receipt of requisitioned forms and publications will be acknowledged.

- Shipments to Foreign Military Sales and Grant Aid customers except when the shipment concerns an unconfirmed MRO.
- Shipments to state, civil, or federal agency activities.
- Receipts into DoD wholesale stock which are controlled under section 14.2, including relocations/shipments to contractors, commercial or industrial activities which are receipt reported to the owner. However, when managers requisition material from another manager or the DRMS and the receipt is reported under chapter 4, the requisitioning manager will acknowledge the receipt.
- Shipments to defense reutilization and marketing which are covered under the procedures for intransit control of shipments to DRMOs.
- Shipments of fresh fruit and vegetables (FF&V).
- Shipments to Army/Air Force Exchange Service (DoDAACs HX1---, HX2---, HX3---, and HX4---).
- Navy manual ships.
- Shipments of bulk petroleum (refer to section 14.1).

14.5.3 RESPONSIBILITIES

14.5.3.1 REPORTING ACTIVITY RESPONSIBILITIES

Reporting Activities, excluding ILCOs, shall:

- Post receipts from wholesale stock to a stock record/property, or equivalent, account and acknowledge material receipt under these procedures.
- Whenever material is taken into U.S. Government custody at final destination, whether it has been accepted or not, assure that the receipt is posted to the stock record/property, or equivalent, account. Establish any needed interface among the transportation, quality, and supply operations/processes to meet this requirement.
- Monitor due-in records and report nonreceipt under these procedures when material is not received within the prescribed timeframes.
- Establish an interface with financial accounting operations/processes to maintain proper financial accounting control for intransit assets, as prescribed by DoD 7220.9-M.

ILCO reporting activities shall screen history records for valid shipment status or coordinate with freight forwarders/customers to determine shipment status/receipt data, for unconfirmed MROs and send a TS 527 IC - Receipt, Inquiry, Response, and MRA within the prescribed timeframes.

14.5.3.2 MANAGER RESPONSIBILITIES

Managers shall:

- Have a closed-loop system to monitor material receipt on all shipments of wholesale stock to DoD activities.

- Control MRA data based on quantity within transaction number. When the MRA does not match a shipped record, use the data only for quality control/management evaluation purposes. Do not reject MRAs to the submitter.
- Keep an accessible record of requisitions, by transaction number and suffix code shipped, until material receipt is confirmed, nonreceipt is reported for the quantity shipped, or failure to acknowledge is included in management evaluation reports.
- Establish an interface between the supply and disbursing functions/operations to provide receipt acknowledgment data for all direct vendor deliveries for documentation of payment files.
- Consider MRA data in the ROD validation process.

14.5.3.3 DOD COMPONENT RESPONSIBILITIES

DoD Components:

- Shall establish the internal interface among the logistics, financial, and contracting operations/systems necessary to accomplish MRA requirements.
- May, for intra-Service/Agency shipments, elect to have their shipping activity or CCP create an MRA and send it with the shipment for completion and submission by the reporting activity.
- May prescribe, where appropriate, that intermediate levels of supply (i.e., organizations that are not the ultimate material recipient but maintain due-in records for referred user requisitions) post receipts to their due-in records and acknowledge material receipt for the user.
- May record MRA data in requisition history and use such acknowledgment to close unconfirmed material release orders.

14.5.4 SUBMISSION OF MATERIAL RECEIPT ACKNOWLEDGMENT

Reporting Activities shall meet the time limits identified in this section. These requirements and timeframes are independent from prescribed shipment tracing and discrepancy/deficiency reporting requirements and timeframes to which the receiving facility must also adhere.

Reporting activities will submit a TS 527 IC - Receipt, Inquiry, Response, and MRA when a material receipt is posted to the retail stock record, stock record account, property account, or equivalent record. Also, submit an MRA when due-in dates are reached and material has not been received.

U.S. Forces reporting activities shall send an MRA:

- Within 5 calendar days from date material received.
- For nonreceipt of material with a CONUS destination, 30 calendar days from date shipped cited in the TS 856 IC - Shipment Status.
- For nonreceipt of material with an overseas destination, 90 calendar days from date shipped cited in the TS 856 IC - Shipment Status.

ILCOs send the MRA 120 calendar days from the date shipped cited in the TS 856 IC - Shipment Status for security assistance shipments.

DAASC will pass MRAs as directed by the reporting activity, and provide images to other designated activities based upon Service and Agency rules. Reporting activities shall direct the MRA to one of the following (listed in order of preference):

- The organization which directed the material shipment as indicated on the TS 856 IC - Shipment Status.
- The last known source of supply to which authorized followup action will be directed as indicated on the TS 870 IC - Supply Status transaction.
- The source of supply to which the TS 511 IC - Requisition was submitted.

ILCOs in receipt of TS 856 IC - pseudo Shipment Status will screen history records for valid shipment status. If valid shipment status is not available, ILCOs will coordinate with freight forwarders/customers to determine shipment status/receipt data. Submit an MRA to reflect the shipment status or receipt data within 120 calendar days from the pseudo, shipment status release date.

If the transaction number of a receipt cannot be identified, post the receipt using a local transaction number. Do not submit an MRA.

14.5.4.1 ACKNOWLEDGMENT OF SPLIT OR PARTIAL SHIPMENTS

When a shipped line item (requisition transaction number and suffix code) is consigned as a split or partial shipment, submit a TS 556 IC - Shipment Status for the shipment segments as they are received. If the total quantity for the shipped line item is not received by the due-in date, report the missing quantity in accordance with the implementation convention and section

14.5.4.2 ACKNOWLEDGMENT OF A DISCREPANT/DEFICIENT SHIPMENT

To acknowledge receipt of a discrepant/deficient shipment, submit a TS 527 IC - Receipt, Inquiry, Response, and MRA with the appropriate discrepancy indicator code. With the exception of the receipt of multiple stock numbers, use a single MRA transaction to acknowledge the receipt showing both nondiscrepant and discrepant quantities. Note that MRA requirements and timeframes are independent from prescribed shipment tracing and discrepancy/deficiency reporting requirements and timeframes to which the receiving facility must also adhere.

When posting a receipt using more than one transaction because the discrepancy results from the receipt of multiple stock numbers, send a TS 527 IC - Receipt, Inquiry, Response, and MRA for each transaction posted. If needed, also send a TS 527 IC - Receipt, Inquiry, Response, and MRA for any quantity not received.

14.5.5 CORRECTING OR CANCELLING A MATERIAL RECEIPT ACKNOWLEDGMENT

Activities which acknowledge a material receipt in error will not correct the MRA. However, to assure validation of any ROD for the shipment, the reporting activity must identify the erroneous MRA information in the ROD remarks.

When a manager receives an MRA that does not match a shipment record, or contains errors, the manager will document the error in the management evaluation report or quality control data, as applicable.

14.5.6 QUALITY CONTROL

To comply with the requirements of chapter 7, Physical Inventory Control, managers and reporting activities shall include the evaluation of internal MRA processing in their quality control programs. The following work processes shall be included: accuracy of MRA initiation or inquiry, submission timeliness, and investigative research to determine and correct processing errors.

Command managers shall assign to specific organizations the responsibility for directing and monitoring corrective action. The purpose of the program is to assist management in identifying those human, procedural, or system errors which adversely affect the MRA process or indicate potential deficiencies in the control over intransit assets.

Command managers must ensure effective organizational inter-relationships among the functional operations/processes concerned with MRA, such as: supply, procurement, financial, inventory management, transportation, quality assurance, and storage.

14.5.7 MANAGEMENT EVALUATION

DoD Components shall establish a management evaluation program which monitors and evaluates MRA submission to assure compliance with MRA requirements. Execute timely processing and perform response rate analyses to identify nonresponsive activities and initiate corrective actions. The program shall provide for:

- Data collection and submission to meet DoD reporting requirements.
- Monthly internal management reporting by managers to a single point within the Component for analysis to identify potential deficiencies in operations or procedures contributing to breakdowns in internal controls for intransit wholesale stock. These reports shall include, as a minimum: the number of unmatched MRAs by "ship to" DoDAAC and the number, percentage, dollar value, source of material (stock or DVD), and date (month) shipped for delinquent MRAs and MRAs having a discrepancy indicator by "ship to" DoDAAC and by shipping activity. Procedures for this purpose shall be cleared under the provisions of the reports control regulation of the individual DoD Component.
- Assigning responsibility to specific organizations to direct and monitor action to correct the causes of unacknowledged material receipts and deficiencies in intransit controls and to request that corrective action be initiated by the cognizant supply PRC representative for delinquent and nonreporting activities of other DoD Components.
- PRC representatives for delinquent and nonreporting activities of other DoD Components.

Managers shall maintain accessible records of shipments and MRA transactions to support the reporting requirements.

14.6 INQUIRY FOR DELINQUENT MATERIAL RECEIPT ACKNOWLEDGMENT

When Material shipment is confirmed or when the requisition involves an unconfirmed MRO, the manager will monitor for receipt of MRA(s). For U.S. forces shipments to CONUS activities, managers must receive MRA for the total quantity shipped within 45 calendar days from the date shipped cited in the TS 945 IC - Material Release Confirmation or TS 856 IC - Shipment Status. For U.S. forces shipments to overseas activities, managers must receive MRA within 105 calendar days from the date released to carrier, or within 135 days from the TS 856 IC - pseudo Shipment Status release date for security assistance requisitions. Otherwise, the manager will send an inquiry TS 527 IC - Receipt, Inquiry, Response, and MRA for delinquent MRA to:

- the organization that the material was shipped to, for U.S. forces.
- the applicable Service ILCO, for security assistance requisitions.

To respond to an inquiry on a delinquent MRA, the reporting activity will prepare a TS 527 IC - Receipt, Inquiry, Response, and MRA, citing the appropriate advice code, and send it to the originator of the inquiry within 15 calendar days from the transaction preparation date cited in the inquiry.

If a reply is not received within 30 calendar days from the TS 527 IC - Receipt, Inquiry, Response, and MRA inquiry preparation date, the manager will include the delinquency information in the management evaluation report (section 14.5.7). Also, if the requisition involves an unconfirmed MRO, then the manager will resolve the record as described in the procedures for force closed material release confirmation, section

APPENDIX 14A

TRANSACTION SET 527 IMPLEMENTATION CONVENTION RECEIPT, INQUIRY, RESPONSE, AND MRA

527 Material Due-In and Receipt

This Draft Standard for Trial Use contains the format and establishes the data contents of the Material Due-In and Receipt Transaction Set (527) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide advanced notification of scheduled material receipts, to report receipts, and to inquire about the status of receipt reporting.

This transaction set may be used to convey a description of the material, receiving conditions and quantities, necessary contract information, and other logistics information. This transaction set is bi-directional between trading partners.

Implementation Notes

1. Receiving activities use this transaction set to report both receipts and historical receipt information to owners and other management control activities. Owners use this transaction set to inquire to storage activities about the status of overdue receipts. For MRA, reporting activities use this transaction set to acknowledge, to the ICP, the receipt or nonreceipt of material; and ICPs use this transaction set to inquire to the reporting activity when MRA is delinquent.
2. To report receipt of bulk petroleum from all sources via tanker use the 2/N9/030 segment to cite the controlling cargo number. For all other commodities, DoD distinguishes receipt transactions as those from procurement sources and those from nonprocurement sources. In the 2/LIN/010 loop, use either 2/CS/020 or 2/N9/030 (but not both) to denote the material source. The CS segment denotes a procurement source; the N9 segment denotes a nonprocurement source.
3. Use a single occurrence of this transaction set to transmit either receipt, historical receipt, receipt inquiry, receipt inquiry response, MRA, or inquiry on delinquent MRA transactions to one activity. Use one occurrence of this transaction set to transmit a single or multiple occurrence of any one of these six basic transaction types.
4. Each transaction within a transaction set may report, for a single stock or part number, one or more quantities distinguished by one or more characteristics; e.g., material condition, management code, etc.

		LOOP ID - LM				100
N/U	330	LM	Code Source Information	O	1	
N/U	340	LQ	Industry Code	M	100	
38	350	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

- 1/050** The LM loop identifies logistics data common to the entire transaction set.
- 1/070** The N1 loop identifies name and or address information common to the entire transaction set.
- 2/020** The CS segment identifies data related to material obtained from procurement sources.
- 2/030** The N9 segment identifies data related to material obtained from non-procurement sources.
- 2/090** The N9 segment identifies shipment identification information.
- 2/120** The LM loop identifies logistics data unique to each use of the RCD loop.
- 2/140** The CS loop identifies contract summary, logistics, and packaging data unique to material received from a procurement source.
- 2/210** The N1 loop identifies name and or address information unique to each use of the RCD loop.
- 2/250** The REF loop conveys serial number, lot number and inventory data.
- 2/310** The QTY loop stratifies the RCD02 quantity based on unique logistic and receiving location data.

Segment: **ST** Transaction Set Header

Level: Header

Loop: ____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143 Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 527 X12.231 Material Due-In and Receipt	M	ID	3/3
Mandatory	ST02	329 Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Mandatory

Segment: BR Beginning Segment for Material Management

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of a material management transaction and to transmit identifying numbers and dates

- Syntax:**
1. C0504 — If BR05 is present, then BR04 is required.
 2. P0708 — If either BR07 or BR08 is present, then the other is required.
 3. P1011 — If either BR10 or BR11 is present, then the other is required.

- Semantic:**
1. BR03 is the date of the transaction set preparation.
 2. BR09 is the time of the transaction set preparation

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
BR01	353	Transaction Set Purpose Code	M ID 2/2

Code identifying purpose of transaction set.

00 Original

77 Simulation Exercise

Code Value Implementation Note:

Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.

Mandatory

BR02	640	Transaction Type Code	M ID 2/2
------	-----	-----------------------	----------

D4 Receipt

Code Value Implementation Note:

Use when reporting a receipt of material into DoD inventory.

DG Response

Code Value Implementation Note:

Use when responding to an inquiry regarding an over-due receipt.

IN Inquiry

Code Value Implementation Note:

Use when initiating an inquiry for receipt information.

TG Receipt Acknowledgment Inquiry

Code Value Implementation Note:

Use when initiating an inquiry for delinquent MRA.

TH Receipt Acknowledgment Advice

Code Value Implementation Note:

Use for MRA to acknowledge the receipt or nonreceipt of material.

Mandatory	BR03	373	Date Date (YYMMDD).	M	DT	6/6
Implementation Note: Express the originating activity's date in GMT.						
Not Used	BR04	67	Identification Code	C	AN	2/20
Not Used	BR05	66	Identification Code Qualifier	O	ID	1/2
Optional	BR06	306	Action Code Code indicating type of action.	O	ID	1/2
W1 Reconcile Historical Records Code Value Implementation Note: Use to indicate the submission of historical information on previously reported receipts. Recipients may not reject these transactions.						
Not Used	BR07	128	Reference Number Qualifier	C	ID	2/2
Not Used	BR08	127	Reference Number	C	AN	1/30
Required	BR09	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O	TM	4/8
Implementation Notes: 1. Express the originating activity's time in GMT. 2. Express time in a four-position (HHMM) format.						
Not Used	BR10	128	Reference Number Qualifier	C	ID	2/2
Not Used	BR11	127	Reference Number	C	AN	1/30

Optional

Segment: LM Code Source Information**Level:** Header**Loop:** LM **Repeat:** 50**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Notes:**

1. Use this 1/LM/050 loop to identify DoD unique data when any specific LQ01 qualifier code, (e.g., 83) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/120 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ/060 that does not apply to all the table 2 iterations. (Codes subject to override: 0, 83, 87, 99, A1, AK, DE, DG and E1.)

2. Do not use the 1/LM/050 loop in inquiries on delinquent MRA or when reversing a receipt transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

Not Used

LM02	822	Source Subqualifier	O	AN	1/15
------	-----	----------------------------	---	----	------

Mandatory

Segment: LQ Industry Code

Level: Header

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3

Implementation Notes:

1. Use codes 87, and 99 or A1 (but not both) for receipt transactions, only when the code value is different than the data cited in the corresponding advance receipt information file, or when there is no advance receipt information file. Use code 99 or A1 (but not both) in historical receipts, receipt inquiry, and receipt inquiry response as needed.

2. Use code EI for MRAs only.

0 Document Identification Code

83 Supply Condition Code

Code Value Implementation Note:

Use in receipt and historical receipt (except reversals), receipt inquiry, and response to receipt inquiry to identify the material condition.

87 Subsistence Type of Pack Code

Code Value Implementation Note:

Use for subsistence items only.

99 Purpose Code

A1 Ownership Code

AK Distribution Code

DE Signal Code

DG Fund Code

EI Discrepancy Indicator Code

Code Value Implementation Note:

Use in MRA transactions to acknowledge receipt of a discrepant shipment; otherwise do not use.

Required

LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
------	------	--	-----------

Mandatory

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 20**Usage:** Mandatory**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code

- Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/070 loop will, as a minimum, cite the organization originating the transaction set and the organization to receive the transaction set.
2. Use this 1/N1/070 loop to indicate an organization when an N101 qualifier code (e.g., CI) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iteration. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/210 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data from the current table 2 iteration (see override discussion in volume 1, chapter 10.) Do not cite any qualifier code in 1/N1/070 that does not apply to all of the table 2 iterations. (Codes subject to override: CI, RC, Z5, and ZB).

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CI Consignor	
		Code Value Implementation Note: Use in "not-from-due" receipts only to indicate the organization shipping the material.	
		RC Receiving Location	
		Code Value Implementation Note: Use only in receipts, responses concerning overdue receipts, and historical receipt submissions to indicate the organization receiving or designated to receive material.	
		Z4 Owning Inventory Control Point	
		Code Value Implementation Note: Use to identify the supply source.	
		Z5 Management Control Activity	
		Code Value Implementation Note: Use in MRA transactions for GFM shipments to contractor when the MCA requires the MRA in addition to the ICP.	
		ZB Party to Receive Credit	

		Code Value Implementation Note: <i>Use only in nonprocurement source "not-from-due" receipts to indicate the organization which will receive credit for the turn-in, when applicable.</i>			
Not Used	N102	93	Name	C AN	1/35
Required	N103	66	Identification Code Qualifier	C ID	1/2
		Code designating the system/method of code structure used for Identification Code (67).			
		10 Department of Defense Activity Address Code (DODAAC)			
		33 Commercial and Government Entity (CAGE)			
		Code Value Implementation Note: <i>Use only in conjunction with N101 code CI, and only when a DODAAC is not assigned.</i>			
		M4 Department of Defense Routing Identifier Code (RIC)			
Required	N104	67	Identification Code	C AN	2/20
		Code identifying a party or other code.			
Not Used	N105	706	Entity Relationship Code	O ID	2/2
Optional	N106	98	Entity Identifier Code	O ID	2/2
		Code identifying an organizational entity, a physical location, or an individual			

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/070 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Mandatory

Segment: LIN Item Identification

Level: Detail

Loop: LIN Repeat: >1

Usage: Mandatory

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use either the 2/CS/020 segment or the 2/N9/030 segment (but not both) for each 2/LIN/010 loop.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Optional

LIN01

350

Assigned Identification

O AN 1/11

Alphanumeric characters assigned for differentiation within a transaction set.

Implementation Notes:

Must use the appropriate capitalized alphabetic code in each receipt and historical receipt transaction to identify the source of the materiel received or returned; otherwise, do not use.

1. A - Receipt to inventory as a result of purchase from commercial sources. Applicable only to procurement source transactions.

2. B - Receipt to inventory as a result of purchase or requisitioning from another DoD activity.

3. C - Receipt to inventory as a result of purchase or requisitioning from a non-DoD activity.

4. D - Receipt to inventory of assembled items, components from disassembled or reclaimed items, or converted or modified items, originally issued to a commercial or government activity for assembly, disassembly, reclamation, conversion, or modification. Applicable to both procurement and nonprocurement source transactions. Includes the return of government owned material furnished for incorporation in the deliverable item but not so incorporated (applicable to nonprocurement source transactions only).

5. E - Receipt to inventory of items previously issued to a commercial or government activity for repair or nondestructive test/evaluation.

6. F - Return to inventory of unused items originally issued to a commercial or government activity for destructive test/evaluation. Applicable only to nonprocurement source transactions.

7. G - Return to inventory of government owned material previously furnished to a commercial or government activity for consumption during the manufacturing or maintenance process, but not so consumed or expended. Applicable only to nonprocurement source transactions.

8. H - Return to inventory, from an authorized commercial or noncommercial activity, of material on loan. Includes the return of government owned equipment furnished to a commercial or noncommercial, activity for use in performing a contract. Applicable only to nonprocurement source transactions.

9. I - Return to inventory from own Service/Agency users. Applicable only to nonprocurement source transactions.

10. J - Return to inventory from other DoD activity users. Applicable only to nonprocurement source transactions.

11. K - Return to inventory from non-DoD activity users. Applicable only to nonprocurement source transactions.

12. L - Return to inventory from MAP Grant Aid users. Applicable only to nonprocurement source transactions.

13. M - Return to inventory from FMS users. Applicable only to nonprocurement source transactions.

14. N - Return to inventory of material relocated between storage activities without change in ownership. Applicable only to nonprocurement source transactions.

15. P - Return to inventory from reutilization and marketing. Applicable only to nonprocurement source transactions.

16. Q - Return to inventory of designated principal item/weapon system. Applicable only to nonprocurement source transactions.

17. R - Return of Service/Agency designated item to inventory, when a like item is issued on an exchange basis. Applicable only to nonprocurement source transactions.

18. S - Return to inventory as a result of requisitioning from own Service/Agency. Applicable only to nonprocurement source transactions.

19. U - Receipt to inventory as a result of purchase from commercial sources or requisitioning from a DoD source, via tanker.

20. V - Receipt to Service/Agency inventory (sale) as a result of requisitioning. Use only for bulk petroleum.

Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
Implementation Notes: 1. Use only one of codes A2, A4, FB, FS, MG, or YP to properly identify the material. 2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE.						
A2 Department of Defense Identification Code (DoDIC) Code Value Implementation Note: Use to identify ammunition items.						
A4 Subsistence Identification Number Code Value Implementation Note: Use to identify subsistence items.						
FB Form Number Code Value Implementation Note: Use to identify the form number.						
FS National Stock Number Code Value Implementation Note: Must use the NSN when known.						
MG Manufacturer's Part Number Code Value Implementation Note: Use to identify nonstandard material.						
YP Publication Number Code Value Implementation Note: Use to identify the publication stock number.						
ZB Commercial and Government Entity (CAGE) Code Code Value Implementation Note: Use only with code MG to identify a manufacturer's part number.

Optional

Segment: N9 Reference Number

Level: Detail

Loop: LIN

Usage: Optional

Max Use: 10

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Notes:

1. Must use for all nonprocurement source transactions (which includes all MRA and inquiry on delinquent MRA transactions) to identify the transaction number.
2. Must use for bulk petroleum receipts via tanker to identify the cargo number assigned.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory

Segment: RCD Receiving Conditions

Level: Detail

Loop: RCD **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To report receiving conditions and specify contested quantities

Syntax: 1. R020406 — At least one of RCD02, RCD04 or RCD06 is required.

2. P0203 — If either RCD02 or RCD03 is present, then the other is required.

3. P0405 — If either RCD04 or RCD05 is present, then the other is required.

4. P060708 — If either RCD06, RCD07 or RCD08 are present, then the others are required.

5. P091011 — If either RCD09, RCD10 or RCD11 are present, then the others are required.

6. P121314 — If either RCD12, RCD13 or RCD14 are present, then the others are required.

7. P151617 — If either RCD15, RCD16 or RCD17 are present, then the others are required.

8. P181920 — If either RCD18, RCD19 or RCD20 are present, then the others are required.

Semantic: 1. RCD01 is the receiving advice line item identification.

2. RCD21 is the cumulative quantity of goods received for a specific time period.

Comments: 1. See the Data Dictionary for a complete list of receiving condition ID's.

2. RCD06 through RCD20 provide for five (5) different quantities whose condition upon receipt is under question.

Implementation Notes:

1. Use in receipt, historical receipt, receipt inquiry, receipt inquiry response, or MRA to report multiple quantities distinguished by characteristics identified through coding cited in the 1/LM/050 or the 2/LM/120 loop.

2. Associate each iteration of the 2/RCD/040 loop with the item referenced in the 2/LIN/010 segment, and the controlling number referenced in either the 2/CSI/020 segment (for procurement source transactions) or the 2/N9/030 segment (for nonprocurement source transactions), and the assignment number cited in the 2/N9/090 segment.

Data Element Summary

Not Used
Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
	RCD01	350	Assigned Identification	O	AN 1/11
	RCD02	663	Quantity Units Received or Accepted Number of Units Received or Accepted	C	R 1/9

Implementation Notes:

1. Each quantity must possess the same characteristics identified in the 2/RCD/040, 1/LM/050, and the 2/LM/120 loops. Should any characteristic differ, use a separate 2/RCD/040 loop.
2. For receipts and historical receipts, RCD02 represents the quantity received; for inquiries on overdue receipts or responses concerning overdue receipts when the material has not been received, RCD02 represents the quantity still due in; for MRAs, RCD02 represents the quantity received or, for nonreceipt, the missing quantity (cite Discrepancy Indicator Code F in the 2/LM/120 loop); for inquiries on delinquent MRA, RCD02 represents the quantity of the shipment which has not been acknowledged or reported as not received.
3. To reverse all or part of a receipt transaction, use a minus sign in front of the quantity to be reversed (see data element type discussion in volume 1, chapter 10). Do not reverse inquiries, responses, MRAs, or inquiries on delinquent MRA.
4. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.

Required

RCD03	355	Unit or Basis for Measurement Code	C	ID	2/2
Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken					

Implementation Note:

Use the unit of issue conversion table in Volume 1, Chapter 10. Use code UL for bulk fuels only to satisfy the X12 standards when the unit of issue is not available. The receiving application software does not use this data element.

Not Used	RCD04	664	Quantity Units Returned	C	R	1/9
Not Used	RCD05	355	Unit or Basis for Measurement Code	C	ID	2/2

Optional

Segment: G62 Date/Time

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R0103 — At least one of G6201 or G6203 is required.

2. P0102 — If either G6201 or G6202 is present, then the other is required.

3. P0304 — If either G6203 or G6204 is present, then the other is required.

Implementation Note:

Use multiple repetitions of this segment, as needed, to define unique dates associated with the transaction. Do not use when reversing a receipt transaction.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
G6201	432	Date Qualifier Code specifying type of date.	C ID 2/2

Implementation Note:

For subsistence items only, use one of code BF or BJ (but not both) as appropriate for receipt and historical receipt transactions only.

11 Shipped on This Date

Code Value Implementation Note:

Must use in inquiries on delinquent MRA; use in MRA transactions for security assistance shipments when the mode of shipment is identified in the 2/G66/115 segment; otherwise, do not use.

17 Estimated Delivery Date

Code Value Implementation Note:

Must use in each inquiry on an overdue receipt; otherwise do not use.

35 Delivered on This Date

Code Value Implementation Note:

Must use in each receipt and historical receipt transaction, except for bulk petroleum, to identify the date the carrier released the material; otherwise do not use.

BB Transaction Control Date

Code Value Implementation Note:

Must use to cite the date the transaction was prepared.

BF Pack Date

Code Value Implementation Note:

Use to identify the date packed for subsistence items only.

BG Backorder Release Date

Code Value Implementation Note:

Use in receipt and historical receipt transactions only.

BH Offered for Delivery

Code Value Implementation Note:

Use only in each receipt and historical receipt transaction, to identify the date the carrier offered material to the storage activity for delivery when it differs from the date material was released by the carrier.

BI Inspection

Code Value Implementation Note:

Use only in receipt and historical receipt transactions to identify the date inspected when the contract requires inspection by the storage activity prior to payment.

BJ Shelf-Life Expiration

Code Value Implementation Note:

Use to indicate the expiration date for subsistence items only.

BR Date Delivery Commenced

Code Value Implementation Note:

Use only in receipt transactions to identify the date pumping from a pipeline or discharging from a tanker or barge commenced. Use only with F.O.B. destination receipts in conjunction with code BS.

BS Product Receipt Date

Code Value Implementation Note:

Must use in each receipt transaction for bulk petroleum; otherwise, do not use.

BT Acceptance

Code Value Implementation Note:

Use only in receipt and historical receipt transactions to identify the date accepted when the contract requires acceptance by the storage activity prior to payment.

BV Recorded

Code Value Implementation Note:

Must use in receipt and historical receipt transactions to cite the date receipt is posted to the Total Item Property record; use in MRA transactions for U.S. forces to cite the date receipt is posted to the stock record/property account or equivalent; otherwise do not use.

Required	G6202	373	Date Date (YYMMDD).	C	DT	6/6
Conditional	G6203	176	Time Qualifier Code specifying the reported time.	C	ID	1/2
			W Effective Time Code Value Implementation Note: Use in conjunction with G6201 codes 35 and BV only. Express time in a six-position (HHMMSS) format.			
Conditional	G6204	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	C	TM	4/8
Optional	G6205	623	Time Code Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a + or - and an indication in hours in relation to Universal Time Coordinate (UTC) time. Since + is a restricted character, + and - are substituted by P and M in the codes that follow.	O	ID	2/2
			LT Local Time			
Not Used	G6206	624	Century	O	NO	2/2

Optional

Segment: **GF** **Furnished Goods and Services**

Level: Detail

Loop: RCD

Usage: Optional

Max Use: 1

Purpose: To specify information related to furnished material, equipment, property, information, and services.

Syntax: 1. P0102 — If either GF01 or GF02 is present, then the other is required.
2. P0506 — If either GF05 or GF06 is present, then the other is required.
3. P0809 — If either GF08 or GF09 is present, then the other is required.

Semantic: GF04 is the value of government-furnished property

Implementation Notes:

1. Use only in nonprocurement source receipts not-from-due. Do not use when reversing a receipt transaction.

2. Use either the MDN or contract number (but not both) associated with a furnished material transaction to reference the associated contract when needed. Identify the controlling contract number in 2/N9/030.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Conditional	GF01	128	Reference Number Qualifier Code qualifying the Reference Number.	C	ID	2/2
			W3 Manufacturing Directive Number			
Conditional	GF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Optional	GF03	367	Contract Number Contract number.	O	AN	1/30

Optional

Segment: AT Financial Accounting
Level: Detail
Loop: RCD
Usage: Optional
Max Use: >1
Purpose: To transmit financial accounting data
Syntax: C1001 — If AT10 is present, then AT01 is required.
Comment: AT09 identifies unique local activity financial accounting information

Implementation Note:

Use multiple repetitions, as needed, only for bulk petroleum diversions to identify the funds to charge or credit for goods, services, and related adjustments.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	AT01	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
			Implementation Note: Use to identify the DLMS Fund Purpose Code. Use any code except CR or DR.	
Optional	AT02	1282	Treasury Symbol Number Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure	O AN 7/21
			Implementation Note: Cite the basic appropriation (departmental index, fiscal year, treasury account number) and limit/subhead.	
Optional	AT03	1283	Budget Activity Number Number identifying an administrative subdivision of funds against which a transaction is to be charged for a standard accounting classification coding structure	O AN 1/16
Optional	AT04	1284	Object Class Number Number identifying the nature of the goods or services acquired and a specific office or organization using resources for a standard accounting classification coding structure	O AN 3/12
Required	AT05	1285	Reimbursable Source Number Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure	O AN 1/3
			Implementation Note: Use to identify the DLMS fund code.	
Optional	AT06	1286	Transaction Reference Number Number identifying an original request for goods and services to the matching financial transaction for a standard accounting classification coding structure	O AN 4/20

Optional	AT07	1287	Accountable Station Number Number identifying an office responsible for entering a financial transaction into the applicable accounting system for a standard accounting classification coding structure	O	AN	3/8
Optional	AT08	1288	Paying Station Number Number identifying an office responsible for making a payment or collection and the corresponding voucher number under which the action was taken for a standard accounting classification coding structure	O	AN	8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O	AN	1/80

Optional

Segment: N9 Reference Number**Level:** Detail**Loop:** RCD**Usage:** Optional**Max Use:** 5**Purpose:** To transmit identifying numbers and descriptive information as specified by the reference number qualifier**Syntax:** 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.**Semantic:** N906 reflects the time zone which the time reflects.**Implementation Note:***Use multiple repetitions as needed to define unique data associated with the transaction.***Data Element Summary**

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N901	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2

Implementation Notes:

1. Use codes 08, AC, AW, BL, BM, FR, IZ, K1, K2, OB, OM, PG, TB, TG, and WY in inquiries on delinquent MRA only. Cite one of these codes or code SI in inquiries on delinquent MRA to identify the shipment unit number.

2. Use only code A3 when reversing a receipt transaction.

08 Carrier Assigned Package Identification Number**16** Military Interdepartmental Purchase Request (MIPR) Number**Code Value Implementation Note:***Use as needed for receipts to identify the MIPR number for tracking in-process maintenance, otherwise, do not use.***1Y** Repair Action Number**Code Value Implementation Note:***Use as needed for receipts to identify the DMISA line number, otherwise do not use.***55** Sequence Number**Code Value Implementation Note:***Use to identify the transaction sequence number assigned to control accountable documents at intermediate and base-level DFSPs.***A3** Assignment Number**Code Value Implementation Note:***Assign a sequential number to receipt transactions for each 2/RCD/040 loop iteration used with the controlling number identified in either the 2/CS/020 segment or the 2/N9/030 segment. In the first 2/RCD/040/loop iteration for a single controlling number, cite numeric 1; increase incrementally by one in each subsequent loop iteration for that controlling number. When reversing a receipt transaction, must cite the previously assigned number in conjunction with the controlling number; otherwise do not use.***AC** Air Cargo Transfer Manifest**AH** Agreement Number

Code Value Implementation Note:

Use as needed for receipts to identify the DMISA number for tracking in-process maintenance, otherwise, do not use.

AW Air Waybill Number

BL Government Bill of Lading

BM Bill of Lading Number

C5 Customer Tracking Number For Loaned Materials

Code Value Implementation Note:

Use to identify the special inventory control account number used to maintain accountability of loan/exchange/replacement of bulk petroleum.

CI Unique Consignment Identifier

Code Value Implementation Note:

Use to identify the final consignee to receive bulk petroleum via tanker associated with the cargo number contained in the 2/N9/030 segment. Cite code value F in N902.

FR Freight Bill Number

FS Final Sequence Number

Code Value Implementation Note:

Use to denote the final shipment against a bulk petroleum requisition or delivery order. Cite code value Z in N902.

IZ Insured Parcel Post Number

K1 Foreign Military Sales Notice Number

K2 Certified Mail Number

OB Ocean Bill of Lading

OM Ocean Manifest

PG Product Group

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Use in procurement source receipt and historical receipt transactions to cite the vendor's shipment number shown on the shipping documentation. Use in inquiries on procurement source receipts to cite the vendor shipment number when known.

SS Split Shipment Number

Code Value Implementation Note:

Use as needed in receipts and MRAs to identify the partial shipment indicator previously assigned when a line item was consigned as split or partial shipment.

T8 Description of Change Code

Code Value Implementation Note:

Use to denote the input of corrected receipt transaction billing data by DFSC only. Cite code value X in N902.

TB Trucker's Bill of Lading

TG Transportation Control Number (TCN)

W1 Defense Turn-In Document Number

Code Value Implementation Note:

Use only in receipt and historical receipt transactions to identify the transaction number assigned to material which is condemned upon receipt and then sent directly to disposal.

W8 Suffix

Code Value Implementation Note:

Use in conjunction with the transaction number cited in the 2/N9/030 segment. Use in receipts of material returns, receipts of bulk petroleum, MRA, and inquiries for delinquent MRA to identify the suffix code assigned when a partial supply action previously occurred.

WY Waybill Number

X9 Internal Control Number

Code Value Implementation Note:

Use only for SMCA in procurement source receipt and historical receipt transactions when a transaction number is needed, in addition to the contract number, for transaction tracking purposes. Identify the controlling contract number in the 2/CS/020 segment.

Required	N902	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.

Optional

Segment: LM Code Source Information**Level:** Detail**Loop:** LM **Repeat:** 25**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Notes:**

1. Must use the 2/LM/120 loop if not using the 1/LM/050 loop in receipt and historical receipt (except reversals), receipt inquiry, and response to receipt inquiry to identify the material condition.
2. For any specific table 2 iteration use this 2/LM/120 loop as needed: 1) to identify a DoD Code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/050 loop or 2) to identify a DoD code with the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/050 loop with a different DoD code in the 2/LM/120 loop when the same LQ01 qualifier is used in both loops, but the LQ02 DoD code is different. (Codes subject to override: 0, 83, 87, 99, A1, AK, DE, DG, and EI).
3. Do not use the 2/LM/120 loop in inquiries on delinquent MRA or when reversing a receipt transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

Not Used

LM02	822	Source Subqualifier	O	AN	1/15
------	-----	----------------------------	---	----	------

Mandatory

Segment: **LQ** Industry Code

Level: Detail

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: **C0102** — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3

Implementation Notes:

1. Use codes 87, and 99 or A1 (but not both) for receipt transactions, only when the code value is different than the data cited in the corresponding advance receipt information file, or when there is no advance receipt information file. Use code 99 or A1 (but not both) in historical receipts, receipt inquiry, and receipt inquiry response as needed.

2. Use code EI for MRAs only.

0 Document Identification Code

78 Project Code

Code Value Implementation Note:

Cite code when available.

80 Advice Code

Code Value Implementation Note:

Use when submitting a duplicate receipt in reply to a receipt inquiry; when submitting a response to a receipt inquiry when there is a receipt in process; when there is no receipt in process and no advance receipt information file; when there is no receipt in process but there is an advance receipt information file; and when submitting a delinquent MRA in response to an inquiry; otherwise, do not use.

83 Supply Condition Code

Code Value Implementation Note:

Use to identify the material condition for the 2/RCD02/040 quantity.

84 Management Code

Code Value Implementation Note:

Use multiple management codes in a single iteration of the 2/LM/120 loop, as needed. Do not use with MRA or inquiries for delinquent MRA.

87 Subsistence Type of Pack Code

Code Value Implementation Note:

Use for subsistence items only.

92 Reason for Disposal Code

Code Value Implementation Note:

Use in receipt and historical receipt transactions to cite the reason when material is shipped to DRMO upon receipt.

99 Purpose Code
A1 Ownership Code
AK Distribution Code
DE Signal Code
DG Fund Code
EI Discrepancy Indicator Code

Code Value Implementation Note:

Use in MRA transactions to acknowledge receipt of a discrepant shipment; otherwise do not use.

GA Action Code

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify submission of change(s) or reversal of a previously accepted/recorded transaction.

Required

LQ02

1271

Industry Code

Code indicating a code from a specific industry code list

C AN 1/20

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** 25

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

For any specific table 2 iteration use this 2/N1/210 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/070 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them or 3) to override an address in the 1/N1/070 loop with a different address specified in the 2/N1/210 when the same N101 qualifier is used in both loops, but the N104 address is different. (Codes subject to override: CI, RC, Z5, and ZB.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CI Consignor	
		Code Value Implementation Note:	
		Use in "not-from-due" receipts only to indicate the organization shipping the material.	
		RC Receiving Location	
		Code Value Implementation Note:	
		Use only in receipts, responses concerning overdue receipts, and historical receipt submissions to indicate the organization receiving or designated to receive material.	
		Z5 Management Control Activity	
		Code Value Implementation Note:	
		Use in MRA transactions for GFM shipments to contractor when the MCA requires the MRA in addition to the ICP.	
		ZB Party to Receive Credit	
		Code Value Implementation Note:	
		Use only in nonprocurement source "not-from-due" receipts to indicate the organization which will receive credit for the turn-in, when applicable.	
		ZD Party to Receive Reports	
		Code Value Implementation Note:	
		Use in MRA transactions to cite organizations requiring MRA, in addition to the organization cited under code TO or Z5, when required by the Service or Agency.

- Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

Use to identify the manufacturer of the UIT item.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual MF Manufacturer of Goods	M ID 2/2
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 33 Commercial and Government Entity (CAGE)	C ID 1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2
Not Used	N106	98	Entity Identifier Code	O ID 2/2

Segment: SE Transaction Set Trailer

Level: Detail

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

15 ISSUE AND SMCA FREEZE AND/OR UNFREEZE TRANSACTIONS

15.1 GENERAL

This chapter provides a standard procedure for processing TS 867 IC - Issue (appendix 15A) information from distribution depots to owner/manager for the purpose of:

- Updating the owner/manager record.
- Recording the appropriate financial transaction.
- Providing a basis for billing the customer.
- Directing freeze/unfreeze actions by the SMCA.

15.2 ISSUE TRANSACTIONS

The TS 867 IC - Issue accounts for the material with the appropriate Product Transfer Type Code directed for issue. This transaction will be used in transmitting issue data from the distribution depot to the owner/manager to the ICP.

- The TS 867 IC - Issue will use the Product Transfer Type Code to specify the type of issue that is being reported.
- Transfer of material to commercial/industrial activities for intra-Service/Agency repair or test will also be accomplished using the TS 867 IC - Issue. When a Service or Agency is repairing items for another Service or Agency, or when repair is to be accomplished at a maintenance facility, induction of items will be reported in accordance with Chapter 12.

15.3 LOAN TRANSACTIONS

When authority is given to loan Government-owned material, supporting documentation pertaining to the terms and conditions of the loan will be maintained in a manual jacket file. As a minimum, the file should contain appropriate records to provide information on the purpose of the loan/authorization, location(s) of the material, condition of material at time of loan, loan duration, quantity, and value of material loaned.

If accountability is dropped, the TS 867 IC - Issue will be used to loan the material from inventory to authorized recipients. Some centralized systems do not use TS 867 IC - Issue for effecting issues; however, the method applied should reflect the issue of loan material for audit and accountability purposes. For a decentralized system, the TS 867 IC - Issue, if created by other than the owner/manager, may be transmitted between distribution depot and owner/manager.

15.4 SMCA FREEZE/UNFREEZE ACTIONS

The freeze/unfreeze action reserves specific contingency and mobilization assets at distribution depots. The SMCA directs the freeze/unfreeze action using the TS 846 IC - Ammunition Freeze/Unfreeze application (appendix 15B).

APPENDIX 15A

TRANSACTION SET 867 IMPLEMENTATION CONVENTION ISSUE

867 Product Transfer and Resale Report

This Draft Standard for Trial Use contains the format and establishes the data contents of the Product Transfer and Resale Report Transaction Set (867) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to: (1) report information about product that has been transferred from one location to another; (2) report sales of product from one or more locations to an end customer; or (3) report sales of a product from one or more locations to an end customer, and demand beyond actual sales (lost orders). Report may be issued by either buyer or seller.

Implementation Notes

1. Storage organizations use this transaction set to report material issues to ICPs/IMMs.
2. Use a single occurrence of this transaction set to exchange transactions between a single storage organization and a single or multiple ICPs/IMMs. Use one occurrence of this transaction set to transmit a single or multiple transactions.

NOTES/COMMENTS:

2/280 The LX loop conveys serial number, lot number, and inventory data.

3/010 The number of line items (CTT01) is the accumulation of the number of LIN segments. If used, hash total (CTT02) is the sum of the value of quantities (QTY02) for each QTY segment.

Mandatory

Segment: **ST** Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
			867 X12.33 Product Transfer and Resale Report			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: **BPT** Beginning Segment for Product Transfer and Resale

Level: Header

Loop: ____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To indicate the beginning of the product transfer and/or resale report and transmit identifying data.

Syntax: **P0506** — If either BPT05 or BPT06 is present, then the other is required.

Semantic: 1. BPT02 identifies the transfer/resale number.
 2. BPT03 identifies the transfer/resale date.
 3. BPT08 identifies the transfer/resale time.
 4. BPT09 is used when it is necessary to reference a Previous Report Number.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	BPT01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions are not processed as action documents which affect accountable records.</i>	M	ID	2/2
Not Used	BPT02	127	Reference Number	O	AN	1/30
Mandatory	BPT03	373	Date Date (YYMMDD).	M	DT	6/6
			Implementation Note: <i>Express the originating activity's date of transaction set preparation in GMT.</i>			
Required	BPT04	755	Report Type Code Code indicating the title or contents of a document, report or supporting item 01 Product Transfer Code Value Implementation Note: <i>Use to identify issue transactions.</i>	O	ID	2/2

O TM 4/8

Not Used

BPT09 127 Reference Number

O AN 1/30

Required

Segment: DTM Date/Time Reference

Level: Header

Loop: _____

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
	Implementation Notes:					
	1. Use to identify the originator's time of transaction set preparation in GMT.					
	2. Express time in a four-position (HHMM) format.					
	3.					
	703 Original Transaction					
Not Used	DTM02	373	Date	C	DT	6/6
Required	DTM03	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	NO	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Required

Segment: N1 Name

Level: Header

Loop: N1 Repeat: 5

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/080 loop will, as a minimum, cite the organization originating the transaction set.

2. Use this 1/N1/080 loop to indicate an organization when an N101 qualifier code (e.g., ST) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/050 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/N101/080 that does not apply to all of the table 2 iterations. (Codes subject to override: BS, BT, SB, ST and Z4.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	M ID 2/2
		BS Bill and Ship To	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use either this code, or both codes BT and ST to identify the organization which receives both the material and the billing for the material.	
		BT Bill-to-Party	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use with code ST to identify the organization to receive billing for material when different from the organization receiving the material. Use precludes the use of code BS.	
		SB Storage Area	
		Code Value Implementation Note: Use to identify the depot or storage activity.	
		ST Ship To	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use with code BT to identify the organization to receive the material when different from the organization being billed for the material. Use precludes the use of code BS.	

			Z4 Owning Inventory Control Point		
Not Used	N102	93	Name	C AN	1/35
Required	N103	66	Identification Code Qualifier	C ID	1/2
			Code designating the system/method of code structure used for Identification Code (67).		
			10 Department of Defense Activity Address Code (DODAAC)		
			33 Commercial and Government Entity (CAGE)		
			M4 Department of Defense Routing Identifier Code (RIC)		
Required	N104	67	Identification Code	C AN	2/20
			Code identifying a party or other code.		
Not Used	N105	706	Entity Relationship Code	O ID	2/2
Optional	N106	98	Entity Identifier Code	O ID	2/2
			Code identifying an organizational entity, a physical location, or an individual		

Implementation Note:

Must use codes FR and TO with the appropriate 1/N101/080 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Required

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/140 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/260 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/150 that does not apply to all the table 2 iterations. (Codes subject to override: 0.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M ID 2/2
Not Used	LM02	822	Source Subqualifier	O AN 1/15

Required

Segment: LQ Industry Code

Mandatory

Segment: PTD Product Transfer and Resale Detail

Level: Detail

Loop: PTD **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of detail information relating to the transfer/resale of a product and provide identifying data.

Syntax: 1. P0203 — If either PTD02 or PTD03 is present, then the other is required.

2. P0405 — If either PTD04 or PTD05 is present, then the other is required.

Implementation Note:

Use to indicate the specific type of issue being reported.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PTD01	521	Product Transfer Type Code Code identifying the type of product transfer.	M ID 2/2
		BC Issue - Other Agency	
		Code Value Implementation Note: Use as needed to identify issues to non-DoD activities. Do not use for bulk petroleum issues.	
		BD Issue - Other Department	
		Code Value Implementation Note: Use as needed to identify issues to DoD activities. Do not use for bulk petroleum issues.	
		BE Grant Aid	
		Code Value Implementation Note: Use as needed to identify issues to a SA (Grant Aid) program. Do not use for bulk petroleum issues.	
		BF Foreign Military Sale	
		Code Value Implementation Note: Use as needed to identify issues to a SA (FMS) program. Do not use for bulk petroleum issues.	
		BG Test and Evaluation	
		Code Value Implementation Note: Use as needed to identify issues for destructive test and/or evaluation.	
		BH Furnished Goods and Services	
		Code Value Implementation Note: Use as needed to identify issues to commercial contractors as GFM. Do not use for bulk petroleum issues.	
		BI Reutilization and Marketing	
		Code Value Implementation Note: Use as needed to identify issues to DMRO.	
		BJ Relocation	
		Code Value Implementation Note: Use as needed to identify issues to another storage location under the control of the same IMM.	

BK Modification

Code Value Implementation Note:

Use as needed to identify issues for assembly, disassembly, conversion, or modification. Do not use for bulk petroleum issues.

BL Repair or Nondestructive Testing

Code Value Implementation Note:

Use as needed to identify issues for nondestructive repair or testing. Do not use for bulk petroleum issues.

BM Loan

Code Value Implementation Note:

Use as needed to identify issues for loan to authorized recipients. Do not use for bulk petroleum loan agreements.

BN Return

Code Value Implementation Note:

Use as needed to identify issues of returned purchases to suppliers for reimbursement. Do not use for bulk petroleum issues.

BO Designated Items

Code Value Implementation Note:

Use as needed to identify issues of designated items for installation on a principal system. Do not use for bulk petroleum issues.

BQ Other

Code Value Implementation Note:

Use as needed to identify issues from inventory when a specific Product Transfer Type Code is not otherwise provided. Use as needed for bulk petroleum to identify issues for material release orders only.

BR Exchange

Code Value Implementation Note:

Use as needed to identify issues when a like item is returned on an exchange basis. Do not use for bulk petroleum exchange/RIK agreements.

SS Stock Sale

Code Value Implementation Note:

Use as needed to identify issues to own service or agency. Use as needed for bulk petroleum to identify issues for sales to all customers only.

Not Used	PTD02	648	Price Multiplier Qualifier	C	ID	3/3

Required

Segment: DTM Date/Time Reference

Level: Detail

Loop: PTD

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:
Use 2/DTM/020 to identify dates associated with the transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
			011 Shipped Code Value Implementation Note: For bulk petroleum use only to identify the date shipped for the material reported.			
			036 Expiration Code Value Implementation Note: For subsistence items, use as needed to identify the expiration date for the material reported.			
			102 Issue Code Value Implementation Note: Use to identify the material issue date. Do not use for bulk petroleum issues.			
			140 Actual Code Value Implementation Note: Use to identify date transaction was prepared.			
			510 Date Packed Code Value Implementation Note: For subsistence items, use as needed to identify the date packed for the material reported.			
Required	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Required

Segment: REF Reference Numbers

Level: Detail

Loop: PTD

Usage: Optional

Max Use: 20

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Use 2/REF/030 to identify the material and other data pertinent to the transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2

Implementation Notes:

1. Use only one of codes 1I, 87, EQ, FQ, MF, NS, S6, or XD to properly identify the material provided.
2. When citing the Federal Supply Classification (code WL), always use code PG to identify the commodity name or description.
3. When citing a manufacturer's part number for the material (code MF), always use code W7 to identify the manufacturer's CAGE.

16 Military Interdepartmental Purchase Request (MIPR) Number

Code Value Implementation Note:

Use as needed to identify the MIPR number when tracking in-process maintenance; otherwise do not use.

11 Department of Defense Identification Code (DoDIC)

Code Value Implementation Note:

Use to identify ammunition items.

1Y Repair Action Number

Code Value Implementation Note:

Use as needed to identify the DMISA line number when tracking in-process maintenance; otherwise do not use.

55 Sequence Number

Code Value Implementation Note:

Use for bulk petroleum only to identify the transaction sequence number assigned to issue documents at intermediate and base level DFSPs.

AH Agreement Number

Code Value Implementation Note:

Use as needed to identify the DMISA number when tracking in-process maintenance; otherwise do not use.

BL Government Bill of Lading

Code Value Implementation Note:

Use for bulk petroleum only to identify GBL(s) associated with an issue.

C7 Contract Line Item Number

Code Value Implementation Note:

Use as needed for bulk petroleum only in conjunction with code CT to identify the CLIN including the SUBCLIN.

CT Contract Number

Code Value Implementation Note:

Use as needed for GFM issues to identify the contract number from which the contractor is authorized to requisition material from DoD inventories. Do not use if a manufacturing directive number is provided. Use as needed for bulk petroleum to identify the contract number applicable to testing at a commercial facility.

CU Clear Text Clause

Code Value Implementation Note:

Use as needed in conjunction with PTD01 code BQ to provide a clear text description that is not otherwise described by authorized codes.

EQ Equipment Number

Code Value Implementation Note:

Use to identify plant equipment.

FQ Form Number

Code Value Implementation Note:

Use to identify the form stock number.

FS Final Sequence Number

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify the final shipment of a bulk petroleum issue. Cite code Z in REF02.

MF Manufacturers Part Number

Code Value Implementation Note:

Use to identify nonstandard material.

NS National Stock Number

Code Value Implementation Note:

Must use the NSN when known.

PG Product Group

Code Value Implementation Note:

Use in conjunction with code 87 to identify the material name or description.

S6 Stock Number

Code Value Implementation Note:

Use to identify the publication stock number.

TN Transaction Reference Number

Code Value Implementation Note:

Use to identify the transaction number assigned to this transaction.

W3 Manufacturing Directive Number

Code Value Implementation Note:

Use as needed for GFM issues to identify the MDN that authorizes the contractor to requisition material from DoD inventories. Do not use if a contract number is provided.

W7 Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use only with code MF to identify the manufacturer's part number.

W8 Suffix

Code Value Implementation Note:

Use to identify the suffix of the associated transaction number.

WL Federal Supply Classification Code

Code Value Implementation Note:

Use to identify the Federal Supply Classification of nonstandard material when a part number is not available and material can only be identified by description (e.g., non-NSN lumber products).

XC Cargo Control Number

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify the cargo number assigned to an issue transported by tanker.

XD Subsistence Identification Number

Code Value Implementation Note:

Use to identify subsistence items.

Conditional	REF02	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Conditional	REF03	352	Description	C	AN	1/80
			A free-form description to clarify the related data elements and their content.			

Implementation Notes:

1. Use with code PG to identify the nonstandard material name or description.
2. Use with code CU to identify issue category information.

Required

Segment: N1 Name**Level:** Detail**Loop:** N1 **Repeat:** 5**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.**Comments:** 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. For any specific table 2 iteration use this 2/N1/050 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/080 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them or 3) to override an address in the 1/N1/080 loop with a different address specified in the 2/N1/050 loop when the same N101 qualifier is used in both loops, but the N104 address is different. (Codes subject to override: BS, BT, SB, ST and Z4.)

2. Use the 2/N1/050 loop as needed for bulk petroleum only to identify the testing laboratory and parties to receive status.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	M ID 2/2
		BS Bill and Ship To	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use either this code, or both codes BT and ST to identify the organization which receives both the material and the billing for the material.	
		BT Bill-to-Party	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use with code ST to identify the organization to receive billing for material when different from the organization receiving the material. Use precludes the use of code BS.	
		SB Storage Area	
		Code Value Implementation Note: Use to identify the depot or storage activity.	
		ST Ship To	
		Code Value Implementation Note: Use as needed for reimbursable bulk petroleum only. Use with code BT to identify the organization to receive the material when different from the organization being billed for the material. Use precludes the use of code BS.	

TL Testing Laboratory

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify the commercial testing facility. Do not use for a government testing facility.

Z1 Party to Receive Status

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify the party to receive status.

Z4 Owning Inventory Control Point

Not Used	N102	93	Name	C	AN	1/35
Required	N103	66	Identification Code Qualifier	C	ID	1/2
			Code designating the system/method of code structure used for Identification Code (67).			
			10 Department of Defense Activity Address Code (DODAAC)			
			33 Commercial and Government Entity (CAGE)			
			M4 Department of Defense Routing Identifier Code (RIC)			
Required	N104	67	Identification Code	C	AN	2/20
			Code identifying a party or other code.			
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code	O	ID	2/2
			Code identifying an organizational entity, a physical location, or an individual			

Implementation Note:

Use code TO in conjunction with the appropriate 2/N101/050 code to indicate the organization to receive the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Required

Segment: QTY Quantity

Level: Detail

Loop: QTY Repeat: >1

Usage: Optional

Max Use: 1

Purpose: To specify quantity information.

Implementation Notes:

1. Use the 2/QTY/110 loop to identify quantity information and provide additional descriptive information about the issue transaction.

2. Use a single 2/QTY/110 loop for each issue transaction (except issues to DRMO, PTD01 code BI) to identify the quantity issued. For issues to DRMO, except bulk petroleum, use a second 2/QTY/110 loop iteration, as needed, to identify the quantity retained in stock.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
QTY01	673	Quantity Qualifier	M	ID	2/2
Code specifying the type of quantity.					
V1 Retention Quantity					
Code Value Implementation Note:					
Use as needed to identify the quantity retained in stock after an issue to DRMO.					
V3 Transfer Quantity					
Code Value Implementation Note:					
Use to identify the quantity issued. To reverse all or part of an issue transaction, use a minus sign in front of the quantity to be reversed (see data element type discussion in volume 1, chapter 10).					

Mandatory

QTY02	380	Quantity	M	R	1/15
Numeric value of quantity.					
Implementation Note:					
Express as a whole number with no decimals. For example, if the quantity obtained is 20, cite only 20.					

Required

QTY03	355	Unit or Basis for Measurement Code	O	ID	2/2
Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken					
Implementation Note:					
Use to identify the unit of issue for issued material. (See the unit of issue conversion table in volume 1, chapter 10.)					

Optional

Segment: AT Financial Accounting

Level: Detail

Loop: QTY

Usage: Optional

Max Use: >1

Purpose: To transmit financial accounting data

Syntax: C1001 — If AT10 is present, then AT01 is required.

Comment: AT09 identifies unique local activity financial accounting information

Implementation Note:

Use multiple repetitions as needed for bulk petroleum only to identify the appropriations to cite for goods, services and related adjustments.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Conditional	AT01	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
	Implementation Note: Use to identify the DLMS Fund Purpose Code. Use any code except CR or DR.			
Required	AT02	1282	Treasury Symbol Number Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure	O AN 7/21
	Implementation Note: Cite the basic appropriation (departmental index, year, treasury account number) and limit/subhead.			
Optional	AT03	1283	Budget Activity Number Number identifying an administrative subdivision of funds against which a transaction is to be charged for a standard accounting classification coding structure	O AN 1/16
Optional	AT04	1284	Object Class Number Number identifying the nature of the goods or services acquired and a specific office or organization using resources for a standard accounting classification coding structure	O AN 3/12
Optional	AT05	1285	Reimbursable Source Number Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure	O AN 1/3
Optional	AT06	1286	Transaction Reference Number Number identifying an original request for goods and services to the matching financial transaction for a standard accounting classification coding structure	O AN 4/20
Optional	AT07	1287	Accountable Station Number Number identifying an office responsible for entering a financial transaction into the applicable accounting system for a standard accounting classification coding structure	O AN 3/8

Optional	AT08	1288	Paying Station Number Number identifying an office responsible for making a payment or collection and the corresponding voucher number under which the action was taken for a standard accounting classification coding structure	O AN	8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O AN	1/80
Implementation Note: <i>Use as needed for supplemental accounting classification or other financial accounting data not included in AT02 through AT08.</i>					
Not Used	AT10	1270	Code List Qualifier Code	O ID	1/3

Optional

Segment: DD Demand Detail

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 1

Purpose: To describe the type of demand and the intended use of material

- Syntax:**
1. C0201 — If DD02 is present, then DD01 is required.
 2. P03040507 — If either DD03, DD04, DD05 or DD07 are present, then the others are required.
 3. C0605 — If DD06 is present, then DD05 is required.
 4. C1009 — If DD10 is present, then DD09 is required.

Semantic: DD08 transmits the stock level indicator. "Y" indicates that the material is normally carried in stock. "N" indicates that the material is not normally stocked

Implementation Notes:

1. Use as needed to identify requisitioner stocking information. Do not use for reversals.
2. DD01 is always understood to be the DLMS Demand Code. (See Volume 1, Chapter 10, Appendix 10G, DLMS code list 74.)
3. DD05 is always understood to be the DLMS Service/Agency Code. (See Volume 1, Chapter 10, Appendix 10G, DLMS code list 71.)
4. Do not use for bulk petroleum transactions.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	DD01	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20
Not Used	DD02	1270	Code List Qualifier Code	O	ID	1/3
Conditional	DD03	128	Reference Number Qualifier Code qualifying the Reference Number.	C	ID	2/2
			W2 Weapon System Number			
			Code Value Implementation Note: Use to identify the applicable weapon system designator code.			
Conditional	DD04	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Conditional	DD05	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20
			Implementation Note: Use to identify the Service associated with the weapon system for which this demand is reported.			
Not Used	DD06	1270	Code List Qualifier Code	O	ID	1/3

Conditional	DD07	380	Quantity Numeric value of quantity.	C	R	1/15
Implementation Note: Use to identify the quantity associated with the weapon system and associated demand code. Express as a whole number with no decimal. For example if the quantity is 20, cite only 20.						
Optional	DD08	1073	Yes/No Condition or Response Code Code indicating a Yes or No condition or response.	O	ID	1/1
Implementation Note: Use to indicate whether this material is normally maintained as an item of inventory by the requisitioning organization.						
Not Used	DD09	1271	Industry Code	C	AN	1/20
Not Used	DD10	1270	Code List Qualifier Code	O	ID	1/3

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Must use the 2/LM/260 loop if not using the 1/LM/140 loop.

2. For any specific table 2 iteration, use this 2/LM/260 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/140 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/140 loop with a different DoD code in the 2/LM/260 loop when the same LQ01 qualifier is used in both loops, but the LQ02 DoD code is different. (Codes subject to override: 0.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

Not Used

------	-----	----------------------------	---	----	------

Optional

Segment: LQ Industry Code

Level: Detail

Loop: LM

Usage: Optional

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3

Implementation Note:

Use code 99 or A1 as needed (but not both) to identify the purpose of the material from which the issue was made or to identify the ownership of the material from which the issue was made.

0 Document Identification Code

39 Transportation Mode or Method Code

Code Value Implementation Note:

Use for bulk petroleum only to identify the mode of shipment.

78 Project Code

Code Value Implementation Note:

Use as needed for all issue transactions except issues to DRMO to identify special programs, exercises, projects, operations, and other purposes.

79 Priority Designator Code

Code Value Implementation Note:

Use as needed for all issue transactions except issues to DRMO to identify the supply priority of the transaction.

80 Advice Code

Code Value Implementation Note:

Use as needed for all issue transactions except issues to DRMO to convey information which was significant to processing the requirement.

83 Supply Condition Code

Code Value Implementation Note:

Use to identify the supply condition of the material from which the item was issued.

84 Management Code

Code Value Implementation Note:

Use as needed to identify appropriate management information.

87 Subsistence Type of Pack Code

Code Value Implementation Note:

Use as needed for subsistence items only to identify type of pack information.

88 Disposal Authority Code

Code Value Implementation Note:

Use as needed for DRMO issue transactions only to identify that items being transferred to disposal are authorized for transfer by the proper authority.

90 Precious Metals Indicator Code

Code Value Implementation Note:

Use as needed for DRMO issue transactions only to identify the precious metals content of material being transferred to disposal.

91 Automated Data Processing Equipment Identification Code

Code Value Implementation Note:

Use as needed for DRMO issue transactions only to identify ADP equipment that is being transferred to disposal.

92 Reason for Disposal Code

Code Value Implementation Note:

Use as needed for DRMO issue transactions only to identify the reason that an item is being transferred to disposal.

97 Ultimate Recipient Code

Code Value Implementation Note:

Use as needed to identify the buyer of DoD material to allow full payment for material supplied to a non-DoD customer.

98 Reason for Requisitioning Code

Code Value Implementation Note:

Use as needed to identify the requisitioner's need for the requested material.

99 Purpose Code

A1 Ownership Code

AK Distribution Code

DE Signal Code

DF Media and Status Code

DG Fund Code

FD Demilitarization Code

Code Value Implementation Note:

Use as needed for DRMO issue transactions only to identify demilitarization information for material being transferred to disposal.

GA Action Code

Code Value Implementation Note:

Use as needed for bulk petroleum only to identify submission of change(s) or reversals of a previously accepted/recorded transaction.

Required

LQ02

1271

Industry Code

Code indicating a code from a specific industry code list

C AN 1/20

Optional

Segment: **LX** Assigned Number

Level: Detail

Loop: LX Repeat: >1

Usage: Optional

Max Use: 1

Purpose: To reference a line number in a transaction set.

Implementation Notes:

1. Use the 2/LX/280 loop as needed to convey information concerning serial/lot number controlled material.
2. Use as a counter to identify the number of 2/LX/280 loop iterations in the transaction set.
3. Do not use the 2/LX/280 loop for bulk petroleum transactions.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LX01	554	Assigned Number Number assigned for differentiation within a transaction set.	M NO 1/6

Implementation Note:

In the first 2/LX/280 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Segment: REF Reference Numbers
Level: Detail
Loop: LX
Required **Usage:** Optional
Max Use: >1
Purpose: To specify identifying numbers.
Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:
 Use 2/REF/290 to identify UIT information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	REF01	128	Reference Number Qualifier Code qualifying the Reference Number. LT Lot Number Code Value Implementation Note: Use as needed to identify the manufacturer's lot number, batch number, or other number identifying the production run. SE Serial Number Code Value Implementation Note: Use as needed to identify the unique item identifier.	M	ID	2/2
Required	REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	REF03	352	Description	C	AN	1/80

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: LX

Usage: Optional

Max Use: 1

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use multiple repetitions as needed to identify dates related to UIT.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 094 Manufacture Code Value Implementation Note: <i>Use as needed to identify the date of manufacture for the material reported.</i> 512 Warranty Expiration Code Value Implementation Note: <i>Use as needed to identify the warranty expiration date associated with the material reported.</i>	M	ID	3/3

------	-----	---	----------

APPENDIX 15B

**TRANSACTION SET 846 IMPLEMENTATION CONVENTION
AMMO FREEZE/UNFREEZE**

846 Inventory Inquiry/Advice

This Draft Standard for Trial Use contains the format and establishes the data contents of the Inventory Inquiry/Advice Transaction Set (846) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used in the following ways: (1) for a seller of goods and services to provide inventory information to a prospective purchaser, with no obligation to the purchaser to acquire these goods or services; (2) for a representative of a seller of goods and services to supply inventory information to that seller; (3) for one location to supply another location with inventory information; and (4) for an inquiry as to the availability of inventory with no obligation on the seller of goods and services to reserve that inventory.

Implementation Notes

1. The SMCA uses this transaction set to advise storage organizations of freeze or unfreeze actions on conventional ammunition.
2. Use a single occurrence of this transaction set to exchange transactions between the SMCA and a single or multiple storage organizations. Use one occurrence of this transaction set to transmit a single or multiple transactions.

29	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

2/390 The REF loop conveys serial number, lot number, and inventory data.

3/010 Number of line items (CTT01) is the accumulation of number of LIN segments. If used, hash total (CTT02) is the sum of the values of the quantities (QTY02) of each QTY segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
	846	X12.28 Inventory Inquiry/Advice			

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9
------	-----	---	---	----	-----

Segment: **BIA** Beginning Segment for Inventory Inquiry/Advice
Level: Header
Loop: ____
Mandatory
Usage: Mandatory
Max Use: 1
Purpose: To indicate the beginning of an inventory inquiry/advice transaction set.
Semantic: 1. BIA03 identifies the number of the inquiry/advice that is transferred.
 2. BIA04 identifies the date of the inquiry/advice that is transferred.
 3. BIA05 identifies the time of the inquiry/advice that is transferred.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BIA01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>	M ID 2/2
Mandatory	BIA02	755	Report Type Code Code indicating the title or contents of a document, report or supporting item ZB Conventional Ammunition Suspension Report Code Value Implementation Note: <i>Use to identify a conventional ammunition freeze/unfreeze transaction.</i>	M ID 2/2
Mandatory	BIA03	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier. Implementation Note: <i>Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.</i>	M AN 1/30
Mandatory	BIA04	373	Date Date (YYMMDD).	M DT 6/6
			Implementation Note: <i>Express the originating activity's date of transaction set preparation in GMT.</i>	
Required	BIA05	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) Implementation Notes: 1. Express the originating activity's time of transaction set preparation in GMT.	O TM 4/8

2. *Express time in a four-position (HHMM) format.*

Not Used

BIA06 306 Action Code

O ID 1/2

Optional

Segment: DTM Date/Time Reference

Level: Header

Loop: _____

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use this 1/DTM/050 segment to indicate the date when a DTM01 qualifier code (e.g., 168) applies to ALL table 2 iterations and the same DTM02 date applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DTM02 date is to differ from the one indicated in table 1, use the 2/DTM/100 segment and specify the matching qualifier in DTM01 and the different date in DTM02. This date will override the table 1 date for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/DTM01/050 that does not apply to all of the table 2 iterations. (Codes subject to override: 168 and 600.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 168 Release Code Value Implementation Note: Use to identify the effective date ammunition is released from suspension. 600 As Of Code Value Implementation Note: Use to identify the effective date ammunition is to be suspended from use or issue.	M	ID	3/3
Required	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Required

Segment: N1 Name

Level: Header

Loop: N1 **Repeat:** 5

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

Use this 1/N1/080 loop to indicate an organization when an N101 qualifier code (e.g., SB) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/450 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/N101/080 which does not apply to all the table 2 iterations. (Codes subject to override: KA and SB.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual KA Item Manager Code Value Implementation Note: Use to identify the SMCA SB Storage Area Code Value Implementation Note: Use to indicate the storage organization.	M ID 2/2
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C ID 1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20

Optional

N106

98

Entity Identifier Code

O

ID

2/2

Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/080 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Segment: **LM** Code Source Information
Level: Header
Loop: LM Repeat: 10
Usage: Optional
Max Use: 1
Purpose: To transmit standard code list identification information
Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/140 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/260 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/150 that does not apply to all table 2 iterations. (Codes subject to override: 0.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory

Segment: LIN Item Identification

Level: Detail

Loop: LIN **Repeat:** 10000

Usage: Mandatory

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use the 2/LIN/010 loop to identify the material, transaction number, and inventory information associated with the freeze/unfreeze action.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Not Used	LIN01	350	Assigned Identification	O	AN	1/11
Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
Implementation Notes:						
1. Use only one of codes A2 or MG to identify the ammunition item.						
2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE.						
A2 Department of Defense Identification Code (DoDIC)						
Code Value Implementation Note:						
Use to identify ammunition items.						
MG Manufacturer's Part Number						
Code Value Implementation Note:						
Use to identify the ammunition manufacturer's part number when no DoDIC is assigned.						
ZB Commercial and Government Entity (CAGE) Code						
Code Value Implementation Note:						
Use only with code MG to identify the ammunition manufacturer's part number.

Optional

Segment: LS Loop Header

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 1

Purpose: To indicate that the next segment begins a loop

Semantic: One loop may be nested contained within another loop, provided the inner nested loop terminates before the outer loop. When specified by the standard setting body as "mandatory", this segment in combination with "LE", must be used. It is not to be used if not specifically set forth for use. The loop identifier in the loop header and trailer must be identical. The value for the identifier is the loop ID of the required loop segment. The loop ID number is given on the transaction set diagram in the appropriate ASC X12 version/release.

Comment: See Figures Appendix for an explanation of the use of the LS and LE segments.

Implementation Note:

Use as needed in each 2/QTY/320 loop to prevent a syntax error in the use of the 2/REF/390 loop.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LS01	447	Loop Identifier Code	M AN 1/4
The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE			

Implementation Note:

Cite REF to indicate the 2/REF/390 loop.

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: REF Repeat: >1

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Use the 2/REF/390 loop to provide UIT information when inventories are segregated in this manner.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	REF01	128	Reference Number Qualifier Code qualifying the Reference Number. LT Lot Number Code Value Implementation Note: Use to identify the manufacturer's lot number, batch number, or other number identifying the production run. SE Serial Number Code Value Implementation Note: Use to identify a unique item identifier.	M ID 2/2
Required	REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C AN 1/30
Not Used	REF03	352	Description	C AN 1/80

Optional

Segment: **DTM** Date/Time Reference

Level: Detail

Loop: REF

Usage: Optional

Max Use: >1

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:
Use multiple repetitions as needed to identify dates related to the UIT.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 094 Manufacture Code Value Implementation Note: <i>Use as needed to identify the date of manufacture of the material identified.</i> 511 Shelf Life Expiration Code Value Implementation Note: <i>Use as needed to identify the shelf life expiration date.</i>	M	ID	3/3
Required	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8

Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 33 Commercial and Government Entity (CAGE)	C ID 1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2
Not Used	N106	98	Entity Identifier Code	O ID 2/2

Optional

Segment: LE Loop Trailer

Level: Detail

Loop: QTY

Usage: Optional

Max Use: 1

Purpose: To indicate that the loop immediately preceding this segment is complete

Semantic: One loop may be nested contained within another loop, provided the inner nested loop terminates before the other loop. When specified by the standards setting body as "mandatory", this segment in combination with "LS", must be used. It is not to be used if not specifically set forth for use. The loop identifier in the loop header and trailer must be identical. The value for the identifier is the loop ID of the required loop beginning segment. The loop ID number is given on the transaction set diagram in the appropriate ASC X12 version/release.

Comment: See Figures Appendix for an explanation of the use of the LE and LS segments.

Implementation Note:

Use as needed in each 2/QTY/320 loop to annotate the conclusion of any 2/REF/390 loop iterations.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LE01	447	Loop Identifier Code	M AN 1/4
The loop ID number given on the transaction set diagram is the value for this data element in segments LS and LE			

Implementation Note:

Repeat the content of 2/LS/380.

Required	Segment: N1 Name
	Level: Detail
	Loop: N1 Repeat: 200
	Usage: Optional
	Max Use: 1
	Purpose: To identify a party by type of organization, name and code
	Syntax: 1. R0203 — At least one of N102 or N103 is required.
	2. P0304 — If either N103 or N104 is present, then the other is required.
	Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
	2. N105 and N106 further define the type of entity in N101.

Implementation Note:

For any specific table 2 iteration use this 2/N1/450 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/080 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them or 3) to override an address in the 1/N1/080 loop with a different address specified in the 2/N1/450 loop when the same N101 qualifier is used in both loops, but the N104 address is different. (Codes subject to override: SB and Z4.)

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98 Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual

		Code designating the system/method of code structure used for Identification Code (67).	
		10 Department of Defense Activity Address Code (DODAAC)	
		M4 Department of Defense Routing Identifier Code (RIC)	
Required	N104	67 Identification Code	C AN 2/20
		Code identifying a party or other code.	
Not Used	N105	706 Entity Relationship Code	O ID 2/2
Optional	N106	98 Entity Identifier Code	O ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	

Implementation Note:

Must use code TO in conjunction with the appropriate 2/N101/450 code to indicate the organization to receive the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Segment: SE Transaction Set Trailer

Level: Summary

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M	NO	1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

16 INSTALLATION CLOSURE PROCEDURES

16.1 GENERAL

This chapter provides procedures and specifies timeframes to be used for installation closures. These procedures are intended to systematically curtail supply support, transfer mission-essential material, transfer excess material and redirect mission-essential requisitions for or from activities affected by installation closures. Included are procedures for reporting all installation-owned property which will not be transferred with the mission to the new location(s).

16.2 APPLICABILITY AND SCOPE

These procedures and timeframes are applicable to all DoD installations, both CONUS and OCONUS, DoD tenant and satellite activities, DoD ICPs, DoD IMMs, and to GSA activities processing OMRs for property generated as a result of an installation closure.

16.3 EXCLUSIONS

In addition to the exclusions cited in chapter 12, section 12.3, these procedures do not apply to the following:

- Interdepartmental and intradepartmental purchasing operations.
- Forms and publications. (However, use the TS 511 IC - Requisition (appendix 5A) when submitting requirements for these items to the GSA and the Navy. See chapter 5 for the requisitioning procedures.)
- COMSEC equipment, COMSEC aids (keying material), and all items including classified components, individual elements, and repair parts, which are classified and designated crypto, or which are normally handled through crypto channels.
- Related personal property which can be reported to GSA as a part of a real estate package. Related personal property is classified as any property:
 - Which is an integral part of real property or is related to, designed for, or specially adapted to the functional or productive capacity of the real property and removal of this personal property would significantly diminish the economic value of the real property. Normally, common use items, including, but not limited to, general purpose furniture, utensils, office machines, office supplies, or general purpose vehicles are not considered to be related personal property.
 - Which is determined by the Administrator of GSA to be related to the real property.
- Installed property (Class II Plant Property).
- Real property.

16.4 INSTALLATION CLOSING PROCEDURES

16.4.1 STRATIFICATION OF INVENTORY

16.4.1.1 INSTALLATION PROCEDURES

Conduct an inventory of all installation-owned property as soon as a confirmed closure date is announced. The inventory will include, but is not limited to, nonconsumable items (recoverable/capitalized assets and assets on table of allowances) and consumable items (assets on stock fund records). Each designated account will maintain its identity. Stratify an inventory applicable to each designated account into three classes of property:

- Mission-essential and is to be transferred to a new location with the mission.
- Not mission-essential but is required for local operations during the period prior to closure.
- Excess to operational needs.

16.4.1.2 TENANT AND SATELLITE ACTIVITIES

Each tenant and/or satellite activity having custody of installation-owned property will return that property to the installation. Accountable records will reflect the returns. Use the procedures in subsection 16.4.1.1, above, to inventory and stratify tenant-owned and satellite-owned property.

16.4.1.3 STOCK FUND

Relocate the S/A managed stock fund items with the mission, if mission-essential, or redistribute within the S/A Defense Business Operation Funds (DBOF). Relocate IMM items with the mission, if mission-essential, or report to the IMM for disposition instructions.

16.4.2 IN-PROCESS REQUISITIONS

Simultaneously with the conduct of the inventory, conduct a review of the installation requisitions. Identify requisitions as those which will be:

- Continued for shipment to the unit's relocation site.
- Continued for operational requirements until closure.
- Canceled as excess to operational needs. Accomplish cancellation by single-line cancellation if time permits. See chapter 5 for the requisition cancellation procedures.

Sixty days prior to closure date, review all requisitions again for need. If required, identify the requisitions for shipment to the relocation site. Use the single-line requisition cancellation procedures to cancel requisitions not required. When time is insufficient to effect single-line cancellations, use the mass or universal cancellation procedures under chapter 5.

16.4.3 DISPOSITION OF INVENTORY

The activity being closed will develop a time-phased schedule to transfer mission-essential property to the new location(s) of the mission(s). Schedule the movement of such property at the earliest date possible without impairing mission capability prior to the transfer. Transfer the mission-essential property to the new location after the transfer of the mission only in those circumstances where mission-essential items are required, up to and including the last day prior to the mission transfer.

In actions involving an installation closure, review and process all items which are not mission-essential under the provisions of DoD Directive 5410.12. Begin the initial review of installation-owned items under DoD Directive 5410.12 immediately upon the completion of the inventory, including those items identified as excess and those items identified as being necessary for operation of the installation prior to closure. Using these item lists as the basis, make the preliminary identification of related personal property as defined by DoD Directive 5410.12.

In actions involving the closure of OCONUS installations, review and process all items which are not mission-essential and/or will not be transferred with the activity under agreements between the United States and the host country. Begin the review immediately upon completion of the inventory, including those items identified as necessary for operations of the installation prior to closure.

Immediately upon completion of the inventory and, if time permits, not less than 6 months prior to the announced date of closure, report all property that has been identified as excess to the needs of the installation and which is not included in the preliminary list of related personal property to the appropriate ICP/IMM under procedures specified in chapter 12.

Stratify all property that is not mission-essential but which is required to operate the installation for all or a portion of the time remaining until closure and which is not included in the preliminary list of related personal property in order of the dates that the items will become excess to operational needs. Sixty days prior to the date that each item will become excess, report the items as excess to the ICP/IMM under procedures specified in chapter 12.

Report items identified as related personal property (see the second subsection of this section, above) to the ICP/IMM using the TS 180 Material Returns Reporting and indicating Project Code 3QQ. The Project Code 3QQ informs the ICP/IMM that the item has been placed on the preliminary inventory of related personal property which is designated to be transferred to the local community at the time of installation closure. If there is a DoD requirement, delete the item(s) from the inventory of related personal property. Do not report related personal property to the GSA under the chapter 12 procedures.

Items which have been reported to ICPs/IMMs as excess under the above guidance and procedures contained in chapter 12 and for which the ICPs/IMMs have indicated a requirement will be processed using ICP/IMM material returns instructions (indicated in the TS 870 IC - Material Returns Supply Status).

Dispose of all items which have been reported to the ICPs/IMMs as excess and the items on which the ICPs/IMMs have provided TS 180 Material Returns Reporting with TC status, plus those items which are not reportable to ICPs/IMMs (for example, locally purchased non-NSN items) under S/A procedures. All items which are identified as related personal property (within the second subsection of this section, above) and for which there is no DoD requirement will remain with the installation.

16.5 PROCEDURES FOR THE INVENTORY CONTROL POINT/INTEGRATED MATERIAL MANAGER

ICPs/IMMs will process OMRs received for property resulting from installation closure using the procedures under chapter 12. ICPs/IMMs will not direct the return of related personal property identified by Project Code 3QQ unless the item is required to meet an AFAO and/or approved PWRR.

17 REUTILIZATION AND MARKETING

17.1 REQUISITIONING DOD EXCESS PERSONAL PROPERTY FROM THE DEFENSE REUTILIZATION AND MARKETING SERVICE

DoD activities and, under certain circumstances, authorized Federal Civil Agencies requisition excess personal property through the DRMS or directly from a DRMO. Activities will request, through an accountable supply officer, only that property which is authorized by parent headquarters or command and will not request quantities of property which exceed authorized retention quantities. Each S/A will furnish DRMS the Federal condition codes that are acceptable in relation to the supply condition code being requisitioned. The DRMS will maintain the IDMS, a standardized and centralized control and accounting system for all excess and surplus personal property located in the DRMOs, and provide visibility of such property through a variety of utilization screening procedures. (See DoD 4160.21-M for utilization policy and procedures.)

DoD activities will transmit requisitions using the TS 511 IC - Requisition (appendix 5A) for excess personal property electronically to the DRMS for processing or hand carry the requisition to the DRMO for property previously selected, scheduled for pickup, or required as a result of screening at the DRMO. Always cite the DoDAAC of the DRMO in requisitions hand carried to a DRMO. Activities or units unable to submit requisitions electronically may forward them directly to the DRMS by mail or by narrative message but will consider this a nonstandard procedure and discontinue its' use as soon as the ability to use an electronic method is realized.

17.1.1 SUBMISSION OF REQUISITIONS TO THE DEFENSE REUTILIZATION AND MARKETING SERVICE

Submit TS 511 IC - Requisition to the DRMS using the requisition preparation procedures under chapter 5. Indicate in the requisition Utilization Code K, L, R, or S to denote free issue within the DRMS; Advice Code 2J to indicate fill or kill, as appropriate; and, if applicable, indicate the appropriate SCC and the corresponding minimum acceptable disposal condition code. Identify the DTID number or the ERN (and DTID suffix, if applicable) when requisitioning a specific item. Use DD Form 1348-1A for hand-carried requisitions to a DRMO when picking up property. Authorized Federal Civil Agencies may use SF 122, Transfer Order-Excess Personal Property, or any other transportation order form approved by GSA under FPMR subchapter 4, part 101-43 to requisition excess/surplus property from the DRMS. Refer to section 17.2, below, when requisitioning small arms from the DRMS.

DAASC edits requisitions to determine if the requisition is for excess personal property as follows:

- If the requisition contains Utilization Code K, L, R, or S and an SCC, DAASC will route the requisition to the DRMS. If the requisition does not contain an SCC but does contain a DTID number, DAASC will route the requisition to the DRMS.
- If the requisition does not contain an SCC and does not contain a DTID number but is directed to the DRMS, DAASC will reject the requisition back to the message originator with a clear-text message stating, INVALID FORMAT FOR DRMS REQUISITION.
- If the conditions in the two previous bullets are false, DAASC will continue the requisition processing.

- If the requisition is directed to the DRMS and there is an SCC but does not contain Utilization Code K, L, R, or S, DAASC will route the requisition to the DRMS.
- If the requisition does not contain an SCC or Utilization Code K, L, R, or S, but has a DTID number, DAASC will route the requisition to the DRMS.
- If the requisition does not contain an SCC, Utilization Code K, L, R, or S nor a DTID number, but does contain the DRMS DoDAAC SC4400, DAAS will reject the requisition back to the message originator with a clear-text message stating, INVALID FORMAT FOR DRMS REQUISITION.

DAASC will provide TS 870 IC - Supply Status with BM status to the requisitioner for validated excess personal property requisitions. DAASC will also process DRMS requisitions with part numbers to obtain an NSN. DAASC will change the part number to an NSN, as appropriate, pass the requisition to the DRMS, and provide TS 870 IC - Supply Status with BG status to the requisitioner. If an NSN is not found, DAASC will reject the requisition TS 870 IC - Supply Status.

17.1.2 RECEIPT OF REQUISITIONS BY THE DEFENSE REUTILIZATION AND MARKETING SERVICE

Upon receipt of the requisition, the DRMS will select the requested item for issue or provide appropriate supply status if not available. If the requested material is not available, the DRMS will place the requisition in the requisition retention file for 60 days and furnish TS 511 IC - Requisition with B1 status to the requisitioner. If all of the requested material does not become available during the 60-day retention period, the DRMS will cancel the remaining unfilled quantity using TS 511 IC - Requisition with D1 status.

17.1.3 PROCESSING OF REQUISITIONS BY THE DEFENSE REUTILIZATION AND MARKETING SERVICE

The DRMS will transmit a TS 940 IC - Material Release (appendix 5F) to the DRMO if stock is available. The DRMS will perpetuate the DTID number or ERN on the TS 940 IC - Material Release whenever a specific item is requisitioned. The DRMO will confirm or deny, as appropriate, all MROs received from the DRMS. The DRMO will use the TS 945 IC - Material Release Advice (appendix 5G) with appropriate transaction type codes, to respond to followups, cancellations, and modifications.

The DRMS will process single line cancellation requests or requisition modifiers if the MRO has not been transmitted to the DRMO or if the requisition is on the requisition retention file. The DRMS will not process mass cancellation requests.

When the DRMO issues material resulting from hand-carried requisitions, the DRMO will prepare an TS 945 IC - Material Release Advice with Transaction Type Code NJ and transmit it to the DRMS.

The DRMS will respond to followups using the chapter 5 procedures.

17.2 REQUISITIONING CONVENTIONAL SMALL ARMS FROM THE DEFENSE REUTILIZATION AND MARKETING SERVICE

Conventional small arms include: handguns; shoulder fired weapons; light automatic weapons up to and including .50 caliber machine guns; recoilless rifles up to and including 106mm;

mortars up to and including 81mm; rocket launchers, man portable; grenade launchers, rifle and shoulder fired; individual operated weapons which are portable and/or can be fired without special mounts or firing devices and which have potential use in terrorist or in civil disturbance activities and are vulnerable to theft. This covers all weapons meeting this criteria, regardless of the origin (including foreign, commercial, confiscated, and nonappropriated funds weapons and museum pieces) or if the weapons are NSN items.

Conventional small arms generally fall into one of the following FSCs: 1005, 1010, 1015, 1025, 1040, 1055, 1090, and 1095; however, do not consider this list as all inclusive. The DRMS will treat any weapon meeting the general guidelines of a small arms weapon accordingly regardless of the FSC.

An accountable supply officer will submit all DoD requisitions for small arms to the CONUS IMM. All requisitions must include the DTID number or ERN, as appropriate, and the PCH&T citations. The DRMS or DRMO will only accept requisitions for small arms from the CONUS IMM. The DRMS or DRMO will reject all others back to the requisitioning activity using TS 870 IC - Supply Status.

17.3 INTRANSIT CONTROL OF SHIPMENTS TO DEFENSE REUTILIZATION AND MARKETING OFFICES

In general, these procedures provide for intransit control of property identified by an NSN or part number (and exclude scrap (SCC S), waste, nonappropriated fund activity, and lost, abandoned, or unclaimed privately owned personal property) shipped/transferred to a DRMO on a DTID from the time of release by a shipping activity until receipt of the property by the DRMO. The reporting of shipments to DRMS through submission of TS 856 IC - Shipment Status, (appendix 6E), is applicable to all shipments of usable property directed to DRMOs regardless of dollar value. The DRMS will process, into their intransit control system, only those shipment status transactions with a line item value of \$800 or more per the FLIS TIR and for all shipments of pilferable or sensitive items regardless of dollar value. For the purpose of these procedures, the extended value of the shipment will be determined on the basis of the transaction reference number, quantity, and the unit price. The unit price will be obtained from the FLIS TIR or, if a FLIS TIR unit price is not available, the unit price will be obtained from the IDMS receipt of usable property document or receipt document.

The use of these controls will provide a central capability to monitor and/or investigate discrepancies in shipments to DRMOs. These controls will also provide a capability for DRMS to furnish information to S/A headquarters concerning the transfer of property to DRMOs. Additionally, these controls may indicate a backlog in receipt processing at a DRMO, requiring assistance by the DRMS.

These procedures do not negate the authority of the DRMO to refuse acceptance of accountability and physical receipt of certain types and classes of material under chapter IV, DoD 4160.21-M. If it is determined that the material is not acceptable for these reasons, and the shipment is rejected/returned to the shipper, the DRMO will provide notice of rejection to the DRMS under existing procedures. The notice of rejection will purge the DRMS suspense file.

Procedures for processing material to disposal apply only to usable material that DRMOs are authorized to physically accept or provide screening and/or sales service.

Documentation required to turn in scrap and waste to a DRMO is specified in chapter IV, DoD 4160.21-M.

Categories of material that are not physically acceptable in a DRMO are listed in chapter IV, DoD 4160.21-M, and discussed individually in Chapter VI, Property Requiring Special Processing.

Some property, because of its peculiar nature, its potential influence on public health, safety, and security, or its potential influence on private industry, must be disposed of in other than a normal fashion. These items must be identified in the DD Form 1348-1A at the time of preparation by the storage activity. This entry will be in-the-clear and contain the minimum wording to properly identify the category of property. See chapter VI, DoD 4160.21-M. In the event that two or more categories are applicable to the same DTID, the most applicable category or the one which identifies an asset requiring the most stringent controls will take precedence.

17.4 DIRECTING MATERIAL TO THE DEFENSE REUTILIZATION AND MARKETING SERVICE

Supply sources will utilize the TS 940 IC - Material Release (appendix 5F) to direct and control issue of supply system stocks on their accountable records to disposal. Supply sources will transmit DROs to the storage site having custody of the stock. If the item is classified in SCC Q and is being transferred to a DRMO, the TS 940 IC - Material Release will contain Management Code BS or BT, as appropriate, to indicate whether or not the material is hazardous to public health and/or safety and whether mutilation¹ is required. The retention quantity in the DRO will determine the quantity of material to be turned in to disposal by the storage site. The retention quantity cited in the DRO will be retained and all remaining stocks transferred to disposal, or, if the quantity on hand is less than the quantity indicated, the storage site will respond with a TS 945 IC - Material Release Advice (appendix 5G).

17.4.1 RELEASE CONFIRMATION

The TS 945 IC - Material Release Advice (appendix 5G) serves as advice from a nonaccountable storage site to the supply source having initiated the DRO of supply action taken. The storage site will transmit the TS 945 IC - Material Release Advice to the supply source on the day the material is delivered to the carrier for shipment to the DRMO. The TS 945 IC - Material Release Advice will, if appropriate, contain code 2I in the N9 segment if the shipped Material line item value is \$800 or more or the item is recorded as pilferable/sensitive. Do not wait for the receipt of a driver's control copy or the return of a signed receipt copy of the DTID before preparing the TS 945 IC - Material Release Advice. When not using the TS 945 IC - Material Release Advice to confirm a shipment of material to a DRMO, generate a TS 856 IC - Shipment Status (appendix 6E) transaction to DRMS, with code 2I in the REF segment if the shipped material line item value is \$800 or more or the item is recorded as pilferable/sensitive, simultaneously with the TS 945 IC - Material Release Advice or other transaction authorizing/directing the shipment to disposal. This procedure is authorized when circumstances (such as local transfers, use of available organic transportation, or other substantiating conditions) make the use of the TS 945 IC - Material Release Advice unnecessary.

17.4.2 RELEASE FOLLOWUP

The supply source will use the TS 940 IC - Material Release (appendix 5F) to follow up on

¹ Material requiring mutilation may not be consigned to DRMOs unless the S/A of the activity directing the shipment has made prior official arrangements with the DRMS. If mutilation is required, provide specific instructions to the DRMO by separate correspondence, citing the DTID number.

storage facilities for unconfirmed DROs 10 days after the date the DRO was created. If the DRO has been complied with, the storage facility will respond with a TS 945 IC - Material Release Advice as indicated above. If the DRO has not been complied with and shipment is anticipated, the storage facility will provide supply status, TS 945 IC - Material Release Advice, (appendix 5G) with an ESD. If there is no record of the DRO, the storage facility will provide TS 945 IC - Material Release Advice with BF status. If the DRO has been denied, the storage activity will provide TS 940 IC - Material Release with BY status.

17.4.3 RELEASE DENIAL

The storage site will prepare and transmit TS 945 IC - Material Release Advice (appendix 5G) to the appropriate supply source that prepared the DRO as a notification of the negative action on the TS 945 IC - Material Release Advice (appendix 5G). Supply sources will utilize the TS 945 IC - Material Release Advice (appendix 5G) to make appropriate adjustments to the inventory records.

17.4.4 RELEASE CANCELLATION

Disposal release cancellations TS 940 IC - Material Release (appendix 5F) are prepared by supply sources having initiated DROs and transmitted to storage sites when it is determined that disposal actions should be discontinued. Supply source cancellation requests will be submitted only in those instances when DROs are unconfirmed. Storage activity response to the cancellation request will be by the TS 945 IC - Material Release Advice (appendix 5G) with the appropriate transaction type code.

17.4.5 RELEASE CANCELLATION FOLLOWUP

A disposal release cancellation followup TS 940 IC - Material Release (appendix 5F) may be submitted by the supply source to obtain the latest status of a disposal release cancellation. The disposal release cancellation followup transaction will be in the same format as the original disposal release cancellation and will be processed by the storage site as a cancellation request provided the original request was not received. If the original request has been received and all required actions have been completed, the storage site will respond to the disposal release cancellation followup by duplicating the previously submitted documentation TS 945 IC - Material Release Advice (appendix 5G).

17.4.6 DEFENSE AUTOMATIC ADDRESSING SYSTEM PROCESSING OF RELEASE CONFIRMATIONS

DAASC will use the data in TS 945 IC - Material Release Advice, with Transaction Type Code NM in the WO6 segment, to create shipment status TS 856 IC - Shipment Status (appendix 6E). Upon completion of this process, DAASC will transmit the DRC to the appropriate organization(s) as indicated in the N1 segment and the TS 856 IC - Shipment Status to the DRMS.

17.5 PROCESSING MATERIAL TO THE DEFENSE REUTILIZATION AND MARKETING SERVICE

The transfer of material to a DRMO on a DTID requires authority for disposal which must be indicated on the DTID by the appropriate disposal authority code and the reason for disposal code. The DRMO will reject shipments which do not indicate a disposal authority code or reason for disposal code on the DTID. Perpetuate the disposal authority code and the reason for disposal code in receipt reporting between the DRMO and the DRMS where accessible history

file records containing stock numbers, quantities, transaction reference numbers, disposal authority codes, reason for disposal codes, and the extended dollar value of shipments will be maintained for 2 years.

Headquarters DRMS is the focal point for all intransit control reporting and will maintain the central file of all intransit transactions up to 3 years. Activities lacking an ability to prepare mechanically processable transactions and/or electrically transmit them to DRMS will arrange for such preparation and/or DDN transmission of the intransit control transactions by the nearest facility having such capabilities. When support from another activity cannot be obtained, mail the transactions to the DRMS.

Activities will direct/process all material to disposal using the DTID. For each DTID, activities will furnish one TS 856 IC - Shipment Status (appendix 6E) to the DRMS for each shipment sent to a DRMO without regard to the dollar value, if a DRC is not used. The TS 856 IC - Shipment Status will contain code 2I in the REF segment if the shipped material line item value is \$800 or more or the item is recorded as pilferable/sensitive. Activities will prepare and transmit the TS 856 IC - Shipment Status (to the DRMS when the actual quantity is delivered to the carrier for shipment. The shipment transaction, meeting the intransit control criteria, will initiate the suspense file at DRMS which will, as a minimum, contain the following data:

<u>DATA ELEMENT</u>	<u>SOURCE</u>
Transaction Reference Number	Shipment Status/IDMS Receipt
NSN/FSC/FSG (if available)	Shipment Status/IDMS Receipt
Unit of Issue	Shipment Status/IDMS Receipt
Extended Dollar Value of Shipment (if available)	FLIS TIR
Controlled Inventory Item Code	FLIS TIR
Quantity Shipped	Shipment Status
Date of Shipment	Shipment Status
Quantity Received	IDMS Receipt
Date of Receipt	IDMS Receipt
Extended Dollar Value	IDMS Receipt
Dollar Value of Quantity Variance Between Shipment and Receipt (if any)	(Internal Computation)

17.5.1 DEFENSE REUTILIZATION AND MARKETING OFFICE PROCEDURES

The DRMO will accept accountability of the shipment if the material is acceptable based on established criteria. The DRMO may acknowledge shipments by furnishing a signed driver's control copy of the DTID to the deliverer.

The DRMO will furnish a signed receipt acknowledgment copy of the DTID upon request by the shipping activity. NOTE: The DRMO will always furnish a copy of the signed DTID for all shipments containing quantity discrepancies. The DRMO will note the difference in the quantity received and the quantity shipped on the DTID.

If a discrepancy exists because the quantity received is less than or greater than the quantity entered on the DTID, the DRMO shall notify the shipping activity. The shipping activity should attempt local resolution. If local resolution is unsuccessful, the DRMO will report the actual quantity received to DRMS as a receipt acknowledgment.

17.5.2 DEFENSE REUTILIZATION AND MARKETING SERVICE PROCEDURES

Under the DRMS internal procedures, all property received at a DRMO should be processed into the IDMS accountable records within 10 working days after receipt. When an IDMS "receipt of usable property" or "receipt" is processed by DRMS, it will be compared with the suspense file generated by the TS 856 IC - Shipment Status. If no suspense file has been created by a shipment status transaction, the IDMS receipt will create a suspense file to include data elements specified section 17.5, above. The suspense file, whether created by a shipment status transaction or by an IDMS receipt, will remain as an open file for a period of 1 year from the date it is initiated unless it is closed by one of the following actions:

- The suspense file will be closed if the receipt matches a shipment status transaction previously recorded in the suspense file and there is no discrepancy, or there is a discrepancy of less than \$800 and the item is not recorded as pilferable/sensitive, or the material is classified as scrap.
- If the receipt matches a shipment status transaction previously recorded in the suspense file and there is a discrepancy value of \$800 or more, or the discrepancy value is less than \$800 and the item is recorded as pilferable/sensitive material, the DRMS will forward a TS 940 IC - Material Release (appendix 5F) with Transaction Type Code NF in the WO5 segment and Advice Code 35 in the LQ segment, to the activity identified as the consignor (shipping activity) in the shipment status.
- If, after a period of 21 days from the date of DRMS posting of the receipt, the receipt does not match a shipment status transaction recorded in the suspense file and the extended value is less than \$800, or the receipt is for a batch of items received by the DRMO, and the item is not recorded as pilferable/sensitive, close the suspense file. (NOTE: DRMOs will not batch lot any property that qualifies for intransit control processing.)
- If, after a period of 21 days from the date of DRMS posting of the receipt, the receipt does not match a shipment status transaction recorded in the suspense file and the extended value is \$800 or more, or the item is recorded as pilferable/sensitive material, the DRMS will forward a TS 940 IC - Material Release (appendix 5F) transaction with Transaction Type Code NF in the WO5 segment and Advice Code 36 in the LQ segment, to the activity identified in the DTID.

When, after a period of 60 days for CONUS and 90 days for OCONUS including Alaska and Hawaii, the DRMS has not received the receipt applicable to a shipment status transaction recorded in the suspense file and the extended value of the shipment status transaction is more than \$800 or the item is recorded as pilferable/sensitive (as determined by reference to the shipment status suspense file), forward a TS 940 IC - Material Release (appendix 5F) transaction with Transaction Type Code NF in the WO5 segment and Advice Code 37 in the LQ segment to the organization identified as the consignor (shipping organization) in the shipment status.

If a disposal supply status TS 870 IC - Supply Status (appendix 6B) or a disposal shipment confirmation TS 856 IC - Shipment Status (appendix 6E) is not received within 20 days of

transmission of the TS 940 IC - Material Release, the DRMS will forward a second TS 940 IC - Material Release with Transaction Type Code NF in the WO5 segment and an appropriate advice code of 35, 36, or 37 in the LQ segment. The record will remain open for a period of 1 year from the date it was originated unless closed by a response to the TS 940 IC - Material Release. When moved from the active file, place records on an accessible history file for an additional 2-year period.

Receipt of TS 940 IC - Material Release with DE supply status will advise DRMS to terminate intransit control processing for the transaction reference number in question. If received in response to a TS 940 IC - Material Release transaction with Advice Code 37, a record of the shipment status transaction is not required. Receipt by DRMS of TS 940 IC - Material Release with DF supply status will advise DRMS to remove the record from the active suspense file and place the record in an accessible history file for a period of 2 years. If TS 940 IC - Material Release with DG supply status is received, intransit control processing for the transaction reference number in question is considered complete. DRMS will use its own procedures to determine why notification of receipt of the material had not been sent by the DRMO to DRMS and DRMS will retain an accessible history file record for 2 years. If TS 940 IC - Material Release with DH supply status is received by DRMS, intransit processing is considered complete and an accessible history file record will be retained by DRMS for a period of 2 years. If a TS 856 IC - Shipment Status is received by DRMS, intransit control processing for the transaction reference number in question is considered complete. If the quantity does not match a previously received receipt, DRMS will use its own procedures to determine why proper notification of receipt had not been sent by the DRMO to DRMS and DRMS will retain an accessible history file record for 2 years. Accessible history file records will contain NSNs, quantities, transaction reference numbers, dollar value of variances (if any), and the identity of applicable shipping activities and DRMOs.

Receipt of a TS 940 IC - Material Release with BF supply status will remove the record from the active suspense file and place the record in the accessible history file for a period of 2 years.

DRMS will provide a Quarterly Intransit to DRMO Report to each S/A Supply PRC Focal Point and to the DoD Supply PRC Chair. As requested, the DRMS provides tailored special extract reports. See appendix 17A for the format and explanation of the Quarterly Intransit to DRMO Report. The RCS for this report is DD-P&L(Q)1787.

17.5.3 SHIPPING ACTIVITY PROCEDURES

Supply organizations in receipt of TS 940 IC - Material Release with Transaction Type Code NF in the WO5 segment and an appropriate Advice Code (35, 36, or 37) in the LQ segment will ensure that applicable shipping activities review signed receipt documentation (DTID), investigate discrepancies, and provide timely responses within 10 working days of receipt of the TS 940 IC - Material Release.

To assure that required copies of the DTID are available, shipping activities will file all signed receipt copies when received from the DRMO. Copies will be retained for a minimum of 2 years after the date of the shipment.

Upon receipt of a TS 940 IC - Material Release with Transaction Type Code NF in the WO5 segment and the appropriate Advice Code (35, 36, or 37) in the LQ segment, the shipping activity will verify the actual quantity receipted for the DRMO, and will respond to the TS 940 IC - Material Release as follows:

- If there is no record of the shipment nor of generating the shipment status and no record

of a signed copy of the DTID, TS 870 IC - Supply Status with BF supply status will be sent to DRMS.

- If it is determined that although shipment status had been sent, no shipment had been made or no record of shipment, other than the shipment status transaction, can be located, TS 870 IC - Supply Status with DE supply status will be sent to DRMS.
- If a signed receipt copy of the DTID is not available, but investigation indicates that property was removed from the storage area and cannot be located, the shipping activity will perform additional research as determined by S/A procedures, including, if necessary, referral to the appropriate criminal investigative activity. Also, send TS 870 IC - Supply Status with DF supply status to DRMS.
- If a signed copy of the DTID is available and the quantity receipted for on the DTID is the same as the quantity in the shipment status, send TS 870 IC - Supply Status with DG supply status to DRMS.
- If a signed copy of the DTID is available but the quantity receipted for in the DTID is different from that in the original shipment status, the shipping activity will perform additional research as determined by S/A procedures, including, if necessary, referral to the appropriate criminal investigative activity. Also, send TS 870 IC - Supply Status with DH supply status to DRMS.
- If the shipping activity has no record of generating a TS 945 IC - Material Release Advice transaction, with Transaction Type Code NM in the WO6 segment or a TS 856 IC - Shipment Status transaction, but has received a signed copy of the DTID, a disposal shipment confirmation TS 856 IC - Shipment Status reflecting the quantity receipted for in the DTID will be sent to DRMS.

In all cases of a variance between the quantity in the WO1 segment, of the TS 940 IC - Material Release, and the quantity receipted for by DRMO, the shipping activity will initially attempt to resolve the variance by contacting the DRMO involved.

APPENDIX 17A

QUARTERLY INTRANSIT TO DEFENSE REUTILIZATION AND MARKETING OFFICE REPORT

1. The DRMS produces the intransit to DRMO report quarterly. In addition, the DRMS produces an annual report at the end of each fiscal year which includes the previous four quarters' totals. The report is in four parts as follows:

- a. Total DoD Summary.
- b. Service Summary.
- c. DoDAAC Breakout.
- d. A Supplemental invalid DoDAAC report.

2. The DRMS distributes the report to the S/A Supply PRC Focal Points as follows:

DLMSO (Supply PRC Chair) - One copy of the DoD summary report
Army - Two hard-copy reports
Navy - Two hard-copy reports
Air Force - Two hard-copy reports and four microfiche reports
Marine Corps - Two hard-copy reports
Defense Logistics Agency - One hard-copy report
Coast Guard - Two hard-copy reports

The DRMS provides copies of the report to the designated S/A Supply PRC Focal Points within 15 days following the end of each respective quarter. Further dissemination of the report is the responsibility of each individual S/A.

3. The format of the report and the explanation of the derivation of the counts are as follows:

QUARTERLY INTRANSIT TO DRMO REPORT

RCS: DD-P&L(Q)1787

Total DoD, Service, or DoDAAC (Clear Text name and address of the DoDAAC will be printed)

<u>Total Matches</u>	<u>Discrepancies Cleared</u> <u>(Disposal Shipment</u> <u>Confirmation)</u> <u>BF DE DF DG DH</u>	<u>Disposal</u> <u>Shipment/</u> <u>Receipt</u> <u>Confirmation</u> <u>Followups</u> <u>Generated</u> <u>(Advice Code)</u> <u>35 36 37</u>	<u>Disposal</u> <u>Shipment</u> <u>Confirmation</u> <u>Followups</u> <u>Generated</u> <u>(Advice Code)</u> <u>35 36 37</u>	<u>No response to Disposal</u> <u>Shipment Confirmation Followups</u> <u>30-60 days 60-90days >90 days</u> <u>35 36 37 35 36 37 35 36 37</u>	<u>Unresolved</u> <u>Discrepancies</u> <u>Moved to</u> <u>History</u> <u>35 36 37</u>
NOTE: 1. All columns show transaction totals and dollar totals. Dollar totals will be shown in multiples of \$100.00. 2. Report prepared in hardcopy will page break after each distinct record, i.e., after each DoDAAC of Service.					

4. The explanation of the columns in the report is as follows:

a. **Total Matches** - Reflects a count of matching shipment status transactions and DRMO receipts. Physical security/controlled inventory item totals require an exact quantity match. All other items require a quantity match within \$800 of an exact match.

b. **Discrepancies Cleared** - Reflects a count of transactions received by DRMS in response to disposal shipment/receipt confirmation and disposal shipment confirmation followups. Subdivided by type of response; disposal shipment confirmation or supply status transactions with Status Code BF, DE, DF, DG, or DH.

c. **Disposal Shipment/Receipt Confirmation Followups Generated** - Reflects a count of disposal shipment/receipt confirmation followup transactions generated during the period (quarter or fiscal year) by DRMS. Subdivided by the type of condition causing a mismatch between the shipment status transaction and the DRMO receipt.

d. **Disposal Shipment Confirmation Followups Generated** - Reflects a count of the disposal shipment confirmation followup transactions generated during the period (quarter or fiscal year) by DRMS. Subdivided by type of condition causing a mismatch between the shipment status transaction and the DRMO receipt.

e. **No response to Disposal Shipment Confirmation Followups** - Reflects a count of the disposal shipment confirmation followup transactions to which there has been no response. Subdivided by number of days since the disposal shipment confirmation followup transaction was generated prior to the report preparation cutoff date. Further subdivided by type of condition causing mismatch of the shipment status transaction and the DRMO receipt.

f. **Unresolved Discrepancies Moved to History** - Count of the transactions (records) moved from the active file to history during the period (quarter or fiscal year) which had no resolution of the discrepant condition. Transactions (records) are removed from the active file to the history file 1 year from the date of receipt of the first transaction in the record (either a shipment status transaction or an IDMS receipt transaction).

18 MATERIAL AND TRANSPORTATION DISCREPANCIES

18.1 GENERAL

This chapter establishes information requirements for electronic reporting of material and transportation discrepancies as follows:

Supply Discrepancy Reports (SDRs) (formerly referred to as RODs)
Transportation Discrepancy Reports (TDRs)/Requests for Information (RFI)
Product Quality Deficiency Reports (PQDRs)
(Other discrepant material categories not specifically identified here will be incorporated in future updates of this manual.)

TS 842 IC - Material and Transportation Discrepancies (appendix 18A) reflects the proposed DoD standard for electronic transmission of SDRs, PQDRs, and TDRs. It provides a variable-length transaction for the purpose of communicating deficiency/discrepancy information previously processed via hard-copy form. Note: Appendix 18A portrays data requirements as understood at the time of publication and is subject to change. Coordination with this office prior to use is mandatory.

In addition, this chapter provides policies and prescribes uniform procedures for the reporting of discrepancy information governed by DLAR 4140.55/ AR 735-11-2/ SECNAVINST 4355.18/ AFR 400-54, Reporting of Item and Packaging Discrepancies, and DLAR 4140.60/ AR 12-12/ SECNAVINST 4355.17A/ AFR 67-7, Processing Discrepancy Reports Against Foreign Military Sales Shipments as enhanced under DLMS. The information requirements and procedures addressed in this chapter incorporate and modify these regulations so that this text can be used independently from the regulations for submission of SDRs. Instructions for manual preparation of the SF 364, Report of Discrepancy (ROD) are shown at appendix 18C.

For policy and procedural guidance for PQDRs and TDRs refer to the appropriate governing regulations: DLAR 4155.24/ AR 702-7/ SECNAVINST 4855.5A, AFR 74-6, Product Quality Deficiency Report Program and DLAR 4500.15 / AR 55-38/ NAVSUPINST 4610.33/ AFR 75-18/ MCO P4610.19 Reporting of Transportation Discrepancies in Shipments.

Use of an automated deficiency/discrepancy reporting system (DRS) is authorized. The DRS must comply with information and processing requirements as described in this chapter. Other reporting methods for SDRs, e.g., by telephone, are authorized as specifically addressed in this chapter.

With the exception of appendix 18A, the remainder of this chapter is relevant to the submission of SDRs only.

18.1.1 APPLICABILITY

These procedures are applicable to DoD Components and external organization elements as defined in volume 1, section 1.1. This is to include shipments made from Defense Business Operations Fund (DBOF) and non-DBOF funded activities, Grant Aid shipments and foreign military sales made under the International Logistics Program, personal property shipments, and shipments received from commercial sources.

18.1.2 EXCLUSIONS

The following types of discrepancies are excluded from this implementation of the SDR.

- Shipping discrepancies found while material is in storage. This does not include short shipment and wrong item discrepancies discovered upon opening a sealed vendor pack (non-FMS material only).
- Discrepancies involving local base or station deliveries to or return from internal or satellite activities. (Exclusion is not applicable to Defense Distribution Depot shipments.)
- Discrepancies involving shipments of privately-owned vehicles.
- Discrepancies involving shipments on requisitions or purchase orders from personnel services activities which cite nonappropriated funds.
- Transportation discrepancies to the extent covered by DLAR 4500.15 et al, Reporting of Transportation Discrepancies in Shipments. Note: For FMS, transportation discrepancies are reportable only when movement was effected within the DTS or when other transportation was provided under U.S. Government auspices. Title to equipment and material will pass at the initial point of shipment, unless otherwise specified in the letter of Offer and Acceptance, as specified in DoD 5105.38-M. Thus, transportation discrepancies which occur outside the DTS are not reportable to the U.S. Government. The exception to this is when there is total nonreceipt; then it is the responsibility of the U.S. Government to provide evidence of shipment.
- Product quality deficiencies to the extent covered by DLAR 4155.24 et al, Product Quality Deficiency Report Program and DLAR 4155.28, Reporting and Processing Medical Material Complaints.
- Shipping discrepancies involving personal property shipments. Packaging discrepancies relative to personal property shipments are included herein.
- Strictly financial discrepancies fall outside the provisions of this chapter (exception criteria for FMS discussed at section 18.3.10.3).

18.2 POLICY

Use the SDR to report shipping or packaging discrepancies attributable to the responsibility of the shipper (including contractors/manufacturers or vendors) and to provide appropriate responses. The purpose of this exchange is to determine the cause of such discrepancies, effect corrective action, and prevent recurrence.

- Receivers of discrepant material use to:
 - Report shipping discrepancies, packaging discrepancies, and discrepancies or nonreceipt of parcel post shipments.
 - Modify, cancel, or follow up on a previously submitted report.
 - Request reconsideration of a response or contest the decision stated in a response.
 - Provide information copies of the report to interested parties.
- Responsible activities as identified in this chapter use to:

- Notify the report initiator of interim status or resolution of the SDR.
- Request additional information on incomplete submissions.
- Reroute the SDR to the appropriate party.
- Provide information copies of the response to interested parties.
- Convert all hard-copy SDRs for discrepancies related to FMS and Grant Aid shipments to electronic format for further processing if required.

SDRs reported via EDI should not also be forwarded for action on a manually prepared SF 364 unless requested by the responsible activity. The design of the transaction set is sufficient to report discrepant conditions and direct disposition instructions. Submission of the SDR via EDI to the responsible activity and all interested parties eliminates the need for duplicate copies of the form. Automated preparation of a hard-copy SDR based upon a single input of data for use as a supporting document for related actions is acceptable where EDI transmission of the TS 842 IC - Material and Transportation Discrepancies is not practical.

An SDR should not be submitted for nonreceipt of shipments that were shipped by traceable means, e.g., GBL and CBL, unless it is determined the nonreceipt is not a transportation discrepancy, or for damaged items shipped via modes other than U.S. Postal Service which are reportable as transportation discrepancies.

Discrepancy processing will interface with other material management functions. Managers use the SDR response to establish a due-in record for return of discrepant material under chapter 13. Managers use advance receipt information (ARI) to advise activities to which a return is directed under chapter 13 (refer to TS 527 IC - Due-In and Advance Receipt Information (appendix 13A)). Managers use material release order/confirmation to direct and record the return of discrepant material located at DoD shipping depots under chapter 5 (refer to TS 940 IC - Material Release (appendix 5E)). Managers use the material returns supply status to direct the return of discrepant material received at other locations under chapter 6 (refer to TS 870 IC - Material Returns Supply Status (appendix 6D)). When returning discrepant material, shipping activities other than DoD shipping depots will prepare shipment status for material returns as described under chapter 6 (refer to TS 856 IC - Shipment Status Material Returns (appendix 6G)).

Incorrect item SDRs should not be submitted for authorized substitution. Unless the requisition contains an appropriate advice code in accordance with chapter 5, limiting the request to a specific item, the DoD Components and GSA will follow the policy of automatic shipment of an interchangeable item. Similarly, quantities may be adjusted to the unit pack quantity, when appropriate, unless restricted by the appropriate advice code in the customer requisition. Such adjustments resulting in quantity variance are not reportable as discrepant.

Shipping activities initiating material returns packaging discrepancies and unauthorized return discrepancies are subject to recoupment action for costs incurred for repackaging and/or disposal. Billing for this purpose may be accomplished using the SF 1080, Voucher for Transfer Between Appropriation and/or Funds, or equivalent.

Billing and accounting adjustment for SDRs will be processed under DLMS, volume 7, Finance. That volume also specifies conditions for allowing automatic adjustments by the Military Service ILCO for FMS discrepant shipments. Automatic adjustments are provided in consideration of

the fact that the cost of researching and documenting such discrepancies may exceed the value of the reported discrepancy. ILCOs will use this authority judiciously and responsible activities will establish controls to prevent its abuse. But, if the situation warrants, complete research, regardless of the dollar value of the SDR, may be requested by the ILCO to obtain evidence of shipment. The DoD ICP/IM, GSA, or shipping activity, as appropriate, will perform the research and provide the specific information needed.

18.3 PROCEDURES

18.3.1 ORIGINAL SUBMISSION OF AN SDR

The receiving activity, or transshipment activity noting packaging deficiencies on shipments intransit, will prepare an SDR when one or more of the conditions described under reporting criteria exist. Identify the discrepancy using data element 1270, Code List Qualifier Code HA, and the appropriate discrepancy code in volume 1, chapter 10, appendix 10H. Use a single code or a combination of codes to describe the discrepancy. If no coding exists to adequately describe the discrepancy use a clear text description.

Supplemental information, e.g., the transaction reference number of the requisition, bill of lading number, or procurement instrument numbers, is provided in accordance with the implementation convention.

The SDR originator must indicate what action has been taken concerning the discrepant material and the desired response from the responsible activity. Use data element 1270, Code List Qualifier Code HB, and the appropriate discrepancy advice code in volume 1, chapter 10, appendix 10H. Again, if no coding exists to adequately describe the action taken or the requested disposition use a clear text description.

Retain shipping and associated documentation to provide a copy if requested. Do not mail hard-copy documentation if data is otherwise accessible to the responsible activity.

18.3.2 REPORTING CRITERIA

A shipping (item) discrepancy is considered to be any variation in quantity or condition of goods (DoD supply condition) received from that shown on the authorized shipping documents or automated record including lost or damaged parcel post shipments or other discrepancies as enumerated below. Packaging discrepancies are any unsatisfactory condition resulting from improper packaging which causes or renders the item, shipment, or package to be vulnerable to any loss, delay, or damage. Product quality and billing/financial discrepancies are reportable on an SDR only as specifically identified below.

For multistop shipments/deliveries, each consignee will report discrepancies pertaining only to their receipt.

FMS discrepancy reports will not be accepted for processing by the Components which are below the dollar limitations contained in the United States Department of America Letter of Offer and Acceptance controlling the case, or any other sales agreement with an FMS purchaser, unless a valid justification for the submission is also provided.

Non-FMS discrepancy reports fall under the reporting criteria based upon dollar value and/or condition cited below.

Coded values which correspond to discrepant conditions do not carry a specific dollar value and

may be applied as appropriate.

18.3.2.1 SHIPMENTS FROM DOD ACTIVITIES, GSA, SUPPLY DISTRIBUTION FACILITIES, AND CONTRACTORS/MANUFACTURERS OR VENDORS

Report discrepant shipments from contractors/manufactures or vendors when they meet the conditions cited below regardless of dollar value.

Optionally, recipients of DLA and GSA directed shipments may submit an SDR for all types of shipments regardless of dollar value. Report all other discrepant shipments when they meet the conditions and value criteria cited below.

18.3.2.1.1 BILLING DISCREPANCY

A discrepancy related to duplicate or multiple billing, and/or involving erroneous prices and values. This type of discrepancy is reportable on an SDR for FMS customers only. Within U.S. Government channels, all billing discrepancies are processed under volume 7, Finance.

18.3.2.1.2 CONDITION OF MATERIAL

Condition Misrepresented. The condition of an item valued in excess of \$100 per line item is found to be other than that shown on the shipping document, or, in the case of subsistence, on supporting inspection/test certificates or records.

Expired Shelf Life. Material received is valued in excess of \$100 per line item on which the shelf life has expired and, for subsistence, there is no indication the item has been inspected under shelf life extension procedures. Include the following information in the SDR, as applicable: manufacturer's name; contract/purchase order number; date manufactured, date cured, date assembled, date packed (apply one as appropriate); expiration date for Type 1 (nonextendible) shelf-life and inspection or test date for Type 2 (extendible) shelf-life items; lot/batch number; location of material; point of contact information (if other than the preparing official); a detailed description of the complaint if needed to supplement encoded information. Reporting activities on GSA managed items should contact the Shelf-Life HOTLINE at 209-946-6333 to determine if the expiration date has been extended. This could save the reporting activity the administrative time for completing the SDR.

Missing Parts. Material received for repair which has been cannibalized of nonexpendable parts or components (including cannibalization of nonexpendable Basic Issue Item (BII) or nonexpendable Supply System Responsibility Item (SSRI) without the authorization of the inventory manager when the total value of the missing item(s) is in excess of \$100). Expendable BII and SSRI are not subject to these procedures.

18.3.2.1.3 CANCELED MATERIAL

Material received is valued in excess of \$100 per line item for canceled requisitions. Confirmation of the cancellation must be on file.

18.3.2.1.4 DOCUMENTATION

Supply documentation is missing, incomplete, or improperly prepared regardless of dollar value.

18.3.2.1.5 OVERAGE /SHORTAGE, NONRECEIPT, OR DUPLICATE

Overage/Shortage. Report overages or shortages valued in excess of \$100 per line item, except for controlled inventory items which are reported regardless of dollar value.

Item overage or shortage is when the quantity received is greater than that shown on the shipping document. This type of variance is not evident on delivery but is discovered when the article of freight, as described on the transportation document, is opened and the contents are checked.

Quantity variances on receipts from procurement which are authorized by the terms of the contract are not reportable as discrepant.

Report overage or shortage discovered while opening a sealed vendor pack regardless of dollar value or shipper. These reports must contain, if available, the contract number from the packaging, the lot number, and original document number. A constructed document number should be provided when the original number is not known. When using a constructed document number in an SDR, include the fund code and credit-to/bill to DoDAAC to ensure that credit/billing is appropriate.

Report quantity variance due to incompatibility of unit of issue between documentation and material received. Unless the requisition contains an appropriate advice code, in accordance with chapter 5, restricting the quantity, automatic adjustment for unit pack is allowable by policy.

This does not include transportation discrepancies as follows:

- Overages or shortages of boxes, packages, or loose articles of freight in a SEAVAN, MILVAN, MSCVAN, RORO trailer, or CONEX.
- Overages or shortages of freight (packaged or loose), upon delivery by a carrier, found to be in excess of the quantity of articles recorded on the bill of lading or transportation document covering the shipment.

The Defense Supply Center Pennsylvania will use the average net weight lotting system when shipping perishable specification freeze and chill items. Actual weight received may differ from actual weight requisitioned or shown on the supply documentation. Do not submit an SDR if the number of cases/containers received agree with the number shown on supply documentation, and actual weight received is within weight range variation.

Duplicate. Duplicate shipments regardless of dollar value.

Nonreceipt. Report nonreceipt regardless of dollar value only when it has been determined that the nonreceipt is not the result of a transportation discrepancy

18.3.2.1.6 U.S. POSTAL SERVICE SHIPMENTS

An SDR is required when items valued in excess of \$100 dollars per line item, reported shipped by U.S. Postal Service are not received or are received in a damaged condition.

18.3.2.1.7

MISDIRECTED

Report when material, regardless of value, is shipped to the wrong activity.

18.3.2.1.8

PACKAGING - IMPROPER PACKING

General. Report any unsatisfactory condition resulting from improper packaging which causes or renders the item, shipment, or package to be vulnerable to any loss, delay, or damage when the estimated or actual cost of correction exceeds \$50.

Exception for High Dollar Value. Submit an SDR when the value of the item, shipment, or package is \$2500 or over, regardless of the estimated or actual cost to correct the packaging discrepancy. This may include loss or damage to the item, shipment, or package except when a report is otherwise required by DLAR 4500.15 et al.

Mission or Life Endangering. Report packaging discrepancies resulting in damaged material which may endanger life, impair combat or deployment operations, or affect other material immediately to the shipping activity, contracting office, or control point by the quickest communication medium to enable the shipper to take immediate corrective action. Submit the SDR within 24 hours of the initial report

Hazardous Material. Any packaging discrepancy, regardless of cost, involving hazardous materials, including improper identification markings of items and packs of unitized loads, regardless of whether damage or other unsatisfactory condition has resulted.

Excessive Packaging. Report excessive packaging by contractors resulting in additional costs to the Government.

Reusable Containers. Report when material is not packed in required reusable containers.

Personal Property. Packaging discrepancies involving shipments of personal property not conforming to specifications. Packaging discrepancy reports on personal property shipments will be prepared at ocean and aerial terminals only.

Delay or Additional Costs. Packaging discrepancies resulting in delay or additional packaging costs at aerial or water terminals or at CCPs. The activity responsible for operating the terminal or port of embarkation/debarkation will be responsible for the submission of an SDR on discrepancies noted on shipments moving through the activity.

Repetitive Packaging Discrepancies. Repetitive packaging discrepancies which impose a significant burden on receiving or transshipment activities.

18.3.2.1.9

PACKAGING - IMPROPER PRESERVATION

Improper Preservation/Protection. Any type of inadequate or improper preservation or physical protection resulting in an unsatisfactory condition or damage when the estimated or actual cost of correction exceeds \$50.

Exception for High Dollar Value. Submit an SDR when the value of the item, shipment, or package is \$2500 or over, regardless of the estimated or actual cost to correct the packaging discrepancy.

Latent Discrepancies. Material found in storage with latent preservation and packaging discrepancies. Reports of this type should be confined to stocks which constitute a problem resulting from a particular specification, preservation or packaging method.

18.3.2.1.10 PACKAGING - IMPROPER MARKINGS

Any omitted, incomplete, illegible, or misplaced markings or identification. Report improper identification of containers or items which requires opening the container or results in improper storage of the material, regardless of cost.

18.3.2.1.11 PACKAGING - IMPROPER UNITIZATION

Improper unitization including inadequate wrapping/strapping or lack of unitization where appropriate resulting in an unsatisfactory condition or damage when the estimated or actual cost of correction exceeds \$50.

Exception for High Dollar Value. Submit an SDR when the value of the item, shipment, or package is \$2500 or over, regardless of the estimated or actual cost to correct the packaging discrepancy.

18.3.2.1.12 PRODUCT QUALITY

Report product quality deficiencies relative to Grant Aid or FMS shipments regardless of dollar value. The reporting activity must have available evidence that a receipt inspection was performed and the defect could not be detected at that time and that the defect is present for reasons other than deterioration or damage incurred during storage or handling. Include the following information in the SDR, as applicable: manufacturer's name; contract/purchase order number; date of manufacture, pack, or expiration; lot/batch number; location of material; point of contact information (if other than the preparing official); a detailed description of the complaint if needed to supplement encoded information.

18.3.2.1.13 TECHNICAL DATA

Item technical information, e.g., name plate, operating handbook, logbook, precautionary markings, warranty data, engineering drawings and associated lists, specifications, standards process sheets, manuals, technical reports, and catalog item identifications, and related information are missing, illegible, incomplete and/or incorrect regardless of dollar value. These are marked on or attached to the item inside of the container, when applicable, for certain items of equipment. When reparables are returned and the appropriate historical information/documentation, operator/maintenance log books, engine oil analysis, etc., are required by Government regulations, and or technical manuals are not included, the receiving activity will submit a SDR regardless of dollar value. Any additional costs incurred by the repairing depot/arsenal because of the missing data will be charged to the activity that returned the item for overhaul/repair.

18.3.2.1.14 INCORRECT ITEM

Incorrect or misidentified material or unacceptable substitutes regardless of dollar value. However, unless the requisition contains an appropriate advice code in accordance with chapter 5, limiting the request to a specific item, automatic shipment of an interchangeable or substitute item is allowed by policy.

Incorrect item discrepancies discovered while opening a sealed vendor pack will be reported regardless of dollar value or shipper. These reports must contain the contract number from the packaging and, if available, the lot number and the original document number. A constructed document number should be provided when the original number is not known. When using a constructed document number in an SDR, include fund code and credit-to/bill to DoDAAC to ensure that credit/billing is appropriate. When known, include the identify of the incorrect item received in the discrepancy report.

If an authorized interchangeable or substitute item is not acceptable to an FMS purchaser, the purchaser will submit a customer report of excess under procedures governed by this manual to the ICP/IM or GSA. The ICP/IM or GSA will provide disposition instructions. All transportation charges will be born by the FMS purchaser in this instance.

18.3.2.1.15 OTHER DISCREPANCIES

Report repetitive discrepancies, regardless of dollar value, or when any other condition of an item not enumerated herein, unless listed specifically under paragraph 18.1.2, Exclusions, is detected at time of receipt.

18.3.2.2 MATERIAL RETURNS

CONUS and overseas activities receiving material returns (excess or redistributed material, or reparable material, including returns from FMS customers) will submit an SDR for discrepancies specified above regardless of condition when the dollar value is equal to or greater than \$100 per line item. Discrepancies pertaining to controlled inventory items will be reported by SDR regardless of dollar value or condition.

Exception for Returns between U.S. Activities. When the material return shipments are classified as unserviceable and uneconomically reparable upon receipt, the receiving activity will report to the shipping activity. The report will include material return document number, quantity, and an explanation of condition classification.

Unauthorized Customer Returns. Distribution depots will report receipt of unauthorized returns to the ICP. The SDR should reflect receipt in condition code K when the actual condition cannot be determined. Material which is returned without its associated technical data will be reported under guidance for technical data discrepancies. Unauthorized returns are subject to recoupment action for disposal or repackaging costs incurred by the distribution depot.

18.3.2.3 REUTILIZATION AND MARKETING SHIPMENTS

Receiving activities will submit an SDR for discrepancies specified above in shipments to and from DRMOs when the dollar value is equal to or greater than \$100 per line item. Activities will submit an SDR for shipments of controlled inventory items regardless of dollar value.

Exception for Reutilization and Marketing Shipments. Do not submit an SDR for shortages or overages found in shipments to DRMOs.

18.3.3 FOLLOWUP ON ORIGINAL SDR

When an responsible activity does not respond to an SDR within the prescribed timeframe specified in this chapter, the reporting activity will submit an SDR identified as a query (followup) on a previously submitted report. Do not repeat information contained in the original submission except as indicated in the implementation convention. Instead, use the nonconformance report

number to identify the original report. Revised point of contact information may be included in the followup. If no response is received to the followup within 30 calendar days, the originator will alert their focal point and request assistance. If the SDR involves another Component, the focal point will coordinate with the applicable focal point office of the shipping activity to obtain a response. The focal point will respond to the originator with an information copy to the ILCO (if FMS-related) or other concerned focal point, if applicable, within 30 calendar days. A list of Military Service/Agency focal points is shown at appendix 18D.

18.3.4 RESPONSIBLE ACTIVITY RESPONSE TO AN SDR

Responsible activities will process all discrepancy reports under the policies and procedures set forth in this publication and Military Service/Agency implementing regulations. Responsible activities include all activities required to take action on a reported discrepancy.

Responsible activities will reply to SDRs by submission of a TS 842 IC - Material and Transportation Discrepancies (appendix 18A) or other approved SDR response format indicating the appropriate disposition, e.g., acknowledgment of the report, disposition of the material, validation of the report with authorization of financial adjustment, instructions for repair or other types of corrective action. Use data element 1270, Code List Qualifier Code HD, and the appropriate discrepancy status or disposition code in volume 1, chapter 10, appendix 10H. Use a single code or a combination of codes. If no coding exists to adequately describe the discrepancy status or disposition use a clear text description. Supplemental information is provided in accordance with the implementation convention.

The ILCO will review all discrepancy reports related to FMS shipments and determine proper course of action based on available FMS case history data. If approved for further processing the ILCO will forward the SDR to the ICP/IM, the DoD shipping depot for FMS nonreceipt SDRs, or GSA, as appropriate.

SDRs which do not meet the reporting criteria or timeframes specified in this chapter and do not present sufficient justification will be denied. The responsible activity will use the SDR response and cite the appropriate discrepancy status or disposition code.

Responsible activities will provide an interim reply where a final reply cannot be provided within the established timeframes. Failure to meet the established timeframes must be caused by reasons outside the control of the ICP/IM or GSA. Interim replies must indicate when additional status will be provided. If no coding exists to specifically identify the reasons for the delay, use a clear text explanation.

The ILCO will report the disposition of all SDRs to the Defense Finance and Accounting Service - Denver, Deputate for Security Assistance (DFAS-DE/I) as required in DoD 7000.14-R, volume 15.

The ILCO will control and maintain records of all FMS-related discrepancy reports to completion.

The ICP/IM responding to an SDR initiated by an FMS purchaser will transmit the response to the ILCO for review and forwarding to the originator.

18.3.4.1 DISPOSITION OF MATERIAL

Use the SDR response as an action reply for those discrepant conditions requiring disposition instructions to the reporting activity, e.g., overages, damages (U.S. Postal Service), deficient material (Grant Aid), or erroneous or misdirected material.

When a material return is directed, the responsible activity will direct the receiving activity to employ the same document number under which the material was originally shipped where ever possible. The responsible activity will provide the transportation account chargeable for the transportation services and supporting information, e.g., the bill of lading number. For FMS, where returns are at Government expense every effort will be made to utilize the DTS for the return movement. The FMS purchasing country will be advised that they are limited to 180 days from date of response to have material back in custody of the U.S. Government.

FMS material not returned to the stocks of DoD or GSA, or retained or disposed of by the foreign government at the direction of the ILCO, will be turned in to the nearest U.S. accountable military activity (regardless of Military Service responsible for the material). This is in accordance with the governing regulation which serves as the authority for the turn-in. The local U.S. military activity will take the material up in stock as a gain to inventory and determine if material is required or is in excess to requirements. If material is required, it will be retained. If excess, to requirements of the local military activity, the material will be reported under chapter 12.

The responsible activity will provide a point of contact for each SDR response.

18.3.4.2 CORRECTIVE ACTION FOR PACKAGING DISCREPANCIES

Responsible activities will, upon receipt of an SDR, immediately investigate the reported discrepancies and take action to prevent their recurrence. An indication of what corrective action is required will normally be included in the SDR reply within the specified time limits and directed to the initiator with an information copy to the appropriate control point. For shipments of ammunition, explosives, or other hazardous material, DoD or GSA responsible activities will provide reports of corrective action in all cases. Wherever possible, use the discrepancy status or disposition code to reflect the corrective action. Less preferably, briefly summarize the corrective action in the narrative portion of the SDR. A corrective action statement may be recorded on a separate document if additional space is required. Statements of corrective action will also be furnished when requested by the SDR initiator or upon special request of the control point. Also, for contractor originated shipments, investigating activities will furnish an information copy of the results of their investigation to the responsible procurement activity or commodity command. Reports of corrective action will not be delayed pending final determination of the contracting officer when reimbursement is warranted. Report final actions when completed. When a CAO investigating activity finds corrective or preventive action is outside the scope of contract administration and requires action by the procuring activity, the SDR and investigation report will be forwarded to the procuring activity for action, with information copies to the appropriate control point and the initiator.

18.3.5 TIME STANDARDS

This section provides standard timeframes for submission of SDRs and SDR responses.

Time limits for reporting of discrepancies relating to contractor warranties are prescribed in individual warranty clauses and/or contracts. These time limits override other time limits specified in this chapter.

18.3.5.1 TIMEFRAMES FOR NON-FMS

An SDR will be submitted by receiving activities and/or transshipment activities as soon as possible but not later than the time standards listed below.

Time limits do not apply to short shipment and wrong item discrepancies discovered upon opening a sealed vendor pack.

- For shortages or overages in shipments of controlled inventory items arms, arms parts, ammunition, and explosives: report within 24 hours of discovery.
- All other discrepancies:
 - CONUS destinations: 90 calendar days from date of shipment.
 - Overseas destinations: 150 calendar days from the date of shipment.

18.3.5.2 FMS TIMEFRAMES

FMS purchasers: Discrepancy report preparation and submission time by the FMS purchaser is limited to the timeframes cited United States of America Letter of Offer and Acceptance, and amendments thereto, as explained in DoD 5105.38-M, chapter 7, Table 701-1, Letter of Offer and Acceptance Standard Terms and Conditions, paragraph 5.4.

ILCO: Within 15 calendar days from date of receipt of the report from the FMS purchaser.

18.3.5.3 LATE SUBMISSION

When circumstances prevent compliance with the above time standards (e.g., response to a tracer action reveals a supposed transportation discrepancy to be a shipping/packaging discrepancy), the reasons for delay will be identified using the appropriate code to describe the discrepancy (data element 1270, Code List Qualifier Code HA, Discrepancy Code in volume 1, chapter 10, appendix 10H). If no coding exists to adequately describe the discrepancy as related to the reason for the delay in reporting, use a brief clear-text explanation. If appropriate, the responsible activities will honor the discrepancy report.

Reporting activities are required to send SDRs to report a shipping or packaging discrepancy even after the above submission time standard has elapsed. If lacking justification, action activities will normally use such SDRs only in the system evaluation and correction process.

18.3.5.4 TIMEFRAMES FOR SDR RESPONSE

Responsible activities will reply to all SDRs received within the following timeframes. Provisions for interim responses are provided under responsible activity response to an SDR above.

- Thirty days from date of receipt of reports for DoD shipping depots responding to the ILCO concerning FMS nonreceipt SDRs.
- Thirty calendar days from date of receipt of reports by the action activity when associated with shipments of controlled inventory items.
- Otherwise, fifty-five calendar days from date of receipt of report by the action activity.
- An additional 15 calendar days from the date of receipt of the response are allowed the ILCO when Grant Aid/FMS discrepancies are involved.

18.3.6 DISTRIBUTION OF SDRS

Submit all SDRs for FMS and Grant Aid shipments to the ILCO for initial action and for conversion to electronic transmission, if required. The ILCO will forward as appropriate in accordance with appendix 18B. Submit all other SDRs to the responsible activity and other interested parties following the guidance in appendix 18B. For items requiring special handling and/or reporting, such as controlled inventory items, the responsible activity will make additional distribution of the report as required.

Where access to an electronic SDR and associated supply information are available, hard-copy documents will not be mailed. Exceptions to this include information not readily available to the responsible/action activity and photographic/pictorial evidence of the discrepancy. Where access to an automated DRS is not available, forward the SDR with attached shipping/billing documents to each responsible activity and information addressee.

When discrepant material is directed for return to a contractor, enclose a hard-copy SDR including disposition instructions. No statement which might adversely affect the Government's claim will be shown on any documentation returned to the contractor.

18.3.6.1 TRANSFERS OF ITEM MANAGEMENT RESPONSIBILITIES

Under the LR procedures, item management responsibility for an item may have been transferred to another component after the date of shipment. In these instances, a single discrepancy reported on a requisition line item may require action and/or reply from two different components (e.g., shipper's IM and GIM. For example, on receipt of an incorrect item, one component could be responsible for the investigation (shipping activity) and the initiation of a billing adjustment (shipper's IM/ICP) for the item billed (but not received) and the GIM would be responsible for providing disposition instructions for the erroneous material.

It is not the responsibility of the SDR initiator to forward copies of the SDR to all parties involved. Instead, it will be the responsibility of the shipping depot or losing item manager (LIM) to coordinate with the GIM for an appropriate response/disposition to the submitter.

18.3.7 CONTESTED DECISIONS AND REQUESTS FOR RECONSIDERATION

These procedures allow the report originator to voice disagreement with disposition decisions. Within DoD, the originator may appeal to his Component focal point (appendix 18D). The FMS purchaser has recourse through the ILCO to the ICP/IM or GSA and, if still not satisfied, to the ILCO's focal point.

18.3.7.1 CONTESTED DECISION FOR NON-FMS-RELATED DISCREPANCIES

When an SDR originator does not concur with a reply/disposition received in response to an SDR, it will forward the SDR indicating a contested decision to their focal point (appendix 18D) for assistance. When the discrepancy involves another Component, the focal point will review all relevant information, requesting supporting documentation only when data is not otherwise accessible, and, if the appeal is valid, forward it to the responsible Component focal point office. This activity will review all data relating to the problem and provide a response to the report originator with copies to other interested parties within 45 calendar days. This decision will be final.

18.3.7.2 REQUESTS FOR RECONSIDERATION FOR FMS-RELATED DISCREPANCIES

The FMS purchaser may ask the U.S. Government to reconsider the disposition for a reported supply discrepancy. Purchasers must send the request, by message or letter, to the ILCO within 90 calendar days from the date of the SDR response. Use the nonconformance number associated with the original report. The ILCO will convert the request for electronic transmission, provide an appropriate advice code, and forward the SDR to the ICP/IM or GSA for reconsideration. If relevant information is not accessible by the responsible activity, the ILCO may forward supporting documentation off-line. The ICP/IM or GSA must respond to the ILCO within 60 calendar days from the date of the request.

18.3.7.3 CONTESTING RECONSIDERATION DECISIONS FOR FMS-RELATED DISCREPANCIES

FMS purchasers may further contest the ICP/IM or GSA decision given after the request for reconsideration. To do so, the purchaser must send an SDR so indicating via message or letter, to the ILCO within 90 days from the date of the ILCO reply to the request for reconsideration. The purchaser must indicate why the ICP/IM or GSA decision is not satisfactory. Cite the nonconformance number on the original SDR. The ILCO will convert the request for electronic transmission and forward the SDR to the appropriate focal point. If relevant information is not accessible by the focal point, the ILCO may forward supporting documentation off-line. The ILCO's focal point, in coordination with any other concerned focal point, will review all the information relating to the problem, see that any needed action is taken, and send the ILCO the final decision within 60 days from the date of receipt from the ILCO. The ILCO will see that all interested parties receive the SDR response. A list of Military Service/Agency focal points is shown at appendix 18D.

18.3.8 CORRECTION AND MODIFICATION OF ORIGINAL REPORT

When the originator wishes to modify status or requested action concerning a previously submitted SDR, a new transmission of the SDR may be used to accomplish this. Indicate that the SDR is a modification or correction and forward to all parties who received the original submission. Cite the nonconformance report number of the original report. Do not duplicate information from the original report except as indicated in the implementation conventions. Provide POC information for the new submission if different from the original. If encoded information does not adequately describe the reason for the correction or modification a brief narrative description may be included. Significant errors in supporting information about the discrepant material or shipment must be corrected by canceling the original SDR and submitting a new report.

18.3.9 CANCELLATION OF AN ORIGINAL REPORT

When an SDR originator discovers a previously reported SDR is not valid, a new SDR submission must be prepared to cancel the original. Indicate that the SDR is a cancellation and forward to all parties who received the original submission. Cite the nonconformance report number of the original report. Do not duplicate detail information from the original report except as indicated in the implementation conventions. Provide POC information for the new submission if different from the original. If encoded information does not adequately describe the reason for the cancellation a brief narrative description may be included.

The originator may submit a revised SDR under a new nonconformance report number.

18.3.10 RELATED ACTIONS

An electronic SDR response may be used to support inventory accounting and financial

adjustments. Maintain the SDR information including responsible activity response on file to support formal adjustment of a consignee's and/or shipper's accountable activity inventory and financial accounting records, as appropriate. Use the SDR response to generate TS 527 IC - Due-in/Advance Receipt /Due Verification (for due-in or ARI)(appendix 13A) and TS 870 IC Material Returns Supply Status (appendix 6D) or TS 950 IC Material Release (appendix 5E), as appropriate, for return of discrepant material.

18.3.10.1 PACKAGING DISCREPANCIES

On shipments from GSA shipping activities or directed by GSA from a contractor/vendor (regardless of dollar value), GSA will investigate and, when appropriate, credit the account cited on submission of SF 1080, Voucher for Transfer Between Appropriation and/or Funds. Reference to the SDR by its nonconformance report number is acceptable as supporting documentation.

Consignor (shipper) replies on Industrial Plant Equipment (IPE) packaging deficiencies which Defense Supply Center Virginia has previously funded for PC&H should provide necessary documents to transfer or reimburse funds for any required corrective action. Handling for PC&H is based on specified requirements for IPE in MIL-HDBK 701, Military Standardization Handbook Blocking, Bracing, and Skidding of Industrial Plant Equipment, and MIL-STD 107, Military Standard Preparation and Handling of Industrial Plant Equipment.

18.3.10.2 CREDIT ADJUSTMENTS ON SDRS

When an action activity has indicated that a credit adjustment has been authorized, reimbursement is normally provided to the fund code and bill-to address cited on the original requisition. When concerned about an apparent nonreceipt of credit and 60 days has elapsed, the SDR submitter should consult with his bill-to finance office for verification. When nonreceipt of credit is confirmed, the financial office will submit a request for billing adjustment as prescribed by the DLMS, Vol 7, Finance.

18.3.10.3 FINANCIAL DISCREPANCIES

The ILCO, ICP, IM, or GSA will forward to the Defense Finance and Accounting Service - Denver, Deputate for Security Assistance (DFAS-DE/I) for processing all financial discrepancies related to administrative and accessorial charges received directly from a FMS purchaser. Responses to these will be returned to the ILCO. Only financial discrepancies related to FMS material are reportable on an SDR.

18.3.10.4 MATERIAL RECEIPT ACKNOWLEDGMENT

ICPs will monitor for discrepancies reported on material receipt acknowledgments, TS 527 IC - Receipt, Inquiry, Response, and MRA (appendix 14A), to assure that identified discrepancies have been properly reported.

18.4 MANAGEMENT EVALUATION

The SDR is so designed that its data may be used to evaluate and improve supply operations and reporting performance. DoD Components will require their respective responsible activities to record, summarize, and report to a single point within the Service or Agency sufficient data to enable attention to be directed towards conditions and organizations that are involved in reporting discrepancies. As a minimum, the report will identify the volume and dollar value of the SDRs by shipping activity, ship-to activity, and discrepancy type. Data reported will be

analyzed by the individual DoD Component and responsibility assigned to specific activities to selectively research discrepancies for the purpose of identifying and correcting the cause of the error(s). Procedures to implement the use of the SDR for this purpose should be cleared under the provisions of the reports control regulation of the applicable DoD Component.

APPENDIX 18A

TRANSACTION SET 842 IMPLEMENTATION CONVENTION - MATERIAL AND TRANSPORTATION DISCREPANCIES

842 Nonconformance Report

This Draft Standard for Trial Use contains the format and establishes the data contents of the Nonconformance Report Transaction Set (842) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report products and processes that do not fulfill specifications or requirements.

The Nonconformance Report Transaction Set provides the ability for the sender to report the nonconformance at the level of detail that is required. It also provides the ability to report the specific nonconformances of a component/part while identifying the assembly as the product that is in nonconformance. The Nonconformance Report Transaction Set may be used to report, initiate, or request actions related to the nonconformance being reported. Financial and accounting information is provided for reporting purposes only.

The Nonconformance Report Transaction Set has the capability to report the cause of the nonconformance and to state the proposed action to be followed to prevent a repetition of the problem.

Implementation Notes

1. Organizations which have received deficient/discrepant material relating to either supply, quality or transportation (including non-receipt of expected material), use a single occurrence of this transaction set to submit the following types of reports to organizations and also receive responses from organizations responsible for processing the reports (action points):

*Supply Discrepancy Reports (SDR)
Product Quality Deficiency Reports (PQDR)
Requests for Information (RFI) concerning transportation discrepancies
Transportation Discrepancy Reports (TDR)
Cargo Outturn Reports (CORS)*

The transaction types identified above cannot be mixed within a single transmission of this transaction set.

Action points use this transaction set to forward deficiency/discrepancy information to support points and other interested parties. Support points and action points also use this transaction set to transmit responses.

Implementation Notes 2 through 4 below will discuss PQDR/SDR type reports. Notes 5 through 8 describe RFI and TDR type reports.

The notes in this IC apply to all report types, unless specifically stated as applying to a specific report.

Similarly, notes apply to both reports and responses unless specifically stated: "use in reports" or "use in responses".

The term follow-up type reports include modifications, cancellations and replacement reports. See specific notes in paragraph 8 for segments to be used in these situations.

2. Specific uses include:

- Submitting an initial report including the forwarding of that report to subsequent processing organizations. For example, from a screening point or action point (screening points apply to PQDRs only).

- Submitting an information-only PQDR report which is the reporting of an additional occurrence of the same deficiency on the same item by the same or different organization. Screening or action points may change this designation from that of the initial submitter. Information-only reports apply only to PQDRs

- Submitting modifications, additions-to, or the cancellation of a previous report.

- Submitting a follow-up inquiry to a previously submitted report for which no response has been received. Follow-ups may be initiated by any organization in the SDR/PQDR process to any subsequent organization (e.g., action point to support point).

- Submitting requests for reconsideration or contesting the results of an investigation. These may be submitted by either originating organizations or screening points to action points or by action points to support points.

- Returning a response that describes the results of the investigation back to the sending organization. Responses can be from support points to action points, action points to screening points/originating organizations, or screening points to originating organizations. A response can be made to any type of report.

3. Within any of the basic deficiency/discrepancy types listed above, use a single occurrence of this transaction set to transmit single or multiple reports or responses to a single organization. Each report may in turn identify single or multiple deficiencies/discrepancies. However, for SDRs, when both item and packaging discrepancies are noted in the same shipment, transmit separate transaction sets.

4. For FMS customers, this transaction set will be used between the International Logistics Control Office (ILCO) and the ICP, depot, or other designated processing activity.

5. Use this transaction set to issue or respond to a Request for Information (RFI), report various transportation discrepancies using a Transportation Discrepancy Report TDR, or to submit a combined Cargo Outturn Report (CORS)/Transportation Discrepancy Report (TDR). Reports are submitted to various organizations including but not limited to, ICPs, shipping activities, contract administration offices, transportation component commands, GSA, the Defense Finance and Accounting Service (DFAS) and other financial payment offices.

6. Use this application to modify, supplement or cancel a previously submitted RFI/TDR or CORS.

A single transaction set may report multiple discrepancies within a single shipment.

7. Organizations use this transaction set to serve four basic functions regarding the reporting of transportation discrepancies (TDR):

First, receivers of discrepant material or activities which did not receive expected material, use this report to notify the appropriate agencies. This includes both requesting claim action be initiated against a commercial carrier or to report a DoD responsible action.

Second, organizations can report astray freight.

Third, organizations can report miscellaneous transportation discrepancies (such as improper packing or handling).

Fourth, organizations can use this transaction set as a combined cargo outturn report/TDR.

CORS data is carried in Table 1 only, and except for segments 1/BNR/020, 1/DTM/040 and the 1/N1/120 loop, RFI/TDR data is carried in Table 2.

8. Submission of modifications or additions to previously submitted reports will carry the full contents of the report, not just the changes/additions. The new submission will overwrite the original report in the receiving application.

Submissions of cancellations and follow-ups will use only the following segments: For SDR/PQDR

1/BNR/010

1/DTM/040

1/N1/120 with N101 codes: 41, 91, ZQ (PQDR) required and others as needed.

2/HL/010 Use report loops only

2/LIN/020 PQDRs only

2/DTM/060 DTM01 code: 282

2/REF/070 REF01 code 5G - SDRs, and codes BZ and QR - PQDRs.

For CORS:

1/BNR/020

1/DTM/040

1/N1/120 with codes LP, P1 and UP required, and others as needed.

1/REF/030 REF01 code V3.

For RFI/TDR:

1/BNR/020

1/DTM/040 (for RFI/TDR)

2/N1/280 with codes P1, SH, and others as needed.

2/HL/010, use report loop only

2/DTM/060 DTM01 code 282

2/REF/070 REF01 code 5G

NOTE/COMMENT:

2010 The HL levels are item, component, product characteristic, report, and serial number. Valid HL Parent-Child relationships are 1) item - component, 2) item - product characteristic, 3) component - product characteristic, 4) report - item, 5) item - serial number, and 6) component - serial number.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
	842	X12.21 Nonconformance Report Transaction Set			

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9
------	-----	---	---	----	-----

Segment: BNR Beginning Segment For Nonconformance Report

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of a Nonconformance Report Transaction Set.

Semantic: 1. BNR02 is the nonconformance report identifier number.
2. BNR03 is the date that the nonconformance report was created.
3. BNR04 is the time that the nonconformance report was created.

Comment: BNR05 indicates the status or intention of the Nonconformance Report.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BNR01	353	Transaction Set Purpose Code Code identifying purpose of transaction set.	M ID 2/2
			00 Original	
			01 Cancellation	
			05 Replace	
			Code Value Implementation Note: Use to indicate a change has been made to a previously transmitted transaction set. When used, all data whether changed or not, must be retransmitted. When used, the retransmitted data will overwrite the information in the receiving database.	
Mandatory	BNR02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	M AN 1/30
			Implementation Note: Use Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements, the receiving application software shall not process it.	
Mandatory	BNR03	373	Date Date (YYMMDD).	M DT 6/6
			Implementation Note: Express the originating activity's date in GMT.	
Required	BNR04	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O TM 4/8
			Implementation Notes: 1. Express the originating activity's time in GMT. 2. Express time in a four-position (HHMM) format.	
Not Used	BNR05	886	Nonconformance Report Status Code	O ID 2/2

Required

BNR06 640 Transaction Type Code O ID 2/2

Code specifying the type of transaction.

CU Cargo Outturn Report

Code Value Implementation Note:

Use to indicate that the transaction set contains a CORS containing one or more TDRs.

DG Response

Code Value Implementation Note:

Use to indicate that the transaction contains a response to a RFI.

QD Product Quality Deficiency

Code Value Implementation Note:

Use to indicate that the transaction set contains a Product Quality Deficiency Report (PQDR). This includes an initial report, modification, cancellation, follow-up, follow-up to a previously submitted report and contesting of a decision provided in a response.

QR Product Quality Deficiency Response

Code Value Implementation Note:

Use to indicate that the transaction set contains a PQDR response.

RP Reporting

Code Value Implementation Note:

Use to indicate a response to a CORS.

RQ Request

Code Value Implementation Note:

Use to indicate that the transaction set contains a RFI.

SD Supply Process Deficiency

Code Value Implementation Note:

Use to indicate that the transaction set contains a report documenting receipt of shipping or packaging discrepancies, discrepant material or, nonreceipt of material. This includes an initial report, modification, cancellation, or follow-up on a previously submitted report. It can also included a request for reconsideration, or the contesting of a decision stated in a response.

SR Supply Process Deficiency Response

Code Value Implementation Note:

Use to indicate that the transaction set contains a response to a report of receipt of item or packaging discrepant material.

TD Shipment or Movement Deficiency

Code Value Implementation Note:

Use to indicate that the transaction set contains a TDR not associated with a CORS.

TR Shipment or Movement Deficiency Response

Code Value Implementation Note:

Use to indicate that the transaction set contains a response to a TDR not associated with a CORS.

Optional

Segment: REF Reference Numbers

Level: Header

Loop: _____

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Must use in CORS to indicate the voyage number and vessel name.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	REF01	128	Reference Number Qualifier Code qualifying the Reference Number. V3 Voyage Number Code Value Implementation Note: <i>Use to indicate the voyage document number.</i> WU Vessel Code Value Implementation Note: <i>Use to indicate the vessel name in REF03. If provided, indicate the vessel number in REF02.</i>	M ID 2/2
Required	REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C AN 1/30
Not Used	REF03	352	Description	C AN 1/80

Segment: DTM Date/Time Reference
Level: Header
Loop: ____
Usage: Optional
Max Use: >1
Purpose: To specify pertinent dates and times
Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	DTM01 374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 330 Referral Date Code Value Implementation Note: Use in CORS with N101 code Z6 to indicate the date an activity receiving a mis-directed shipment, re-directs it to the correct activity. Use the 2/N1/340 loop when applicable to RFI/TDR and SDR. 514 Transferred Code Value Implementation Note: Use in reports to indicate the date a mis-routed report is forwarded or assigned to the correct activity. Use with 1/N101/code ZL. 585 Report Code Value Implementation Note: Must use in all reports to indicate the date of the report. When 1/BNR06/020 is code CU, use 2/DTM/060 code 585 to indicate the report date for the individual TDRs associated with a CORS.	M	ID	3/3
Required	DTM02 373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03 337	Time	C	TM	4/8
Not Used	DTM04 623	Time Code	O	ID	2/2
Optional	DTM05 624	Century The first two characters in the designation of the year (CCYY).	O	NO	2/2
Not Used	DTM06 1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07 1251	Date Time Period	C	AN	1/35

Optional

Segment: PWK Paperwork

Level: Header

Loop: PWK **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify the type and transmission of paperwork or supporting information

Syntax: **P0506** — If either PWK05 or PWK06 is present, then the other is required.

Comments: 1. PWK05 and PWK06 may be used to identify the addressee by a code number.

2. PWK07 may be used to indicate special information to be shown on the specified report.

3. PWK08 may be used to indicate action pertaining to a report.

Implementation Notes:

1. Use in *CORS* to identify additional paperwork or supporting material being forwarded separately. Use multiple occurrences of this segment as needed, to identify supporting documentation being forwarded to the action party.

2. Use PWK04-07 as a unit to provide unique identification of the report cited in PWK01.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PWK01	755	Report Type Code Code indicating the title or contents of a document, report or supporting item	M ID 2/2
		AE Attachment Code Value Implementation Note: Use to identify support documentation to be forwarded to the action party. Use when the type of document is not specified by a particular code in PWK01.	
		AG Actual Code Value Implementation Note: Use to identify temperature charts.	
		CI Certificate of Inspection Report Code Value Implementation Note: Use to identify reports of investigation.	
		CT Certification Code Value Implementation Note: Use to identify a witness statement.	
		DJ Discharge Monitoring Report Code Value Implementation Note: Use to identify tally sheets indicating quantity and condition of discharged cargo and truckload shipments.	
		DW Drawing(s)	

Code Value Implementation Note:

Use to indicate drawings.

IV Invoice

Code Value Implementation Note:

Use to indicate the billing document for actual or estimated costs of repair. Enter the word "Estimate" in PWK07 when indicating a repair estimate.

QD Quality Review Order, Purchasing

Code Value Implementation Note:

Use to identify a Procurement QAR Correspondent Report (DD1232).

QR Quality Report

Code Value Implementation Note:

Use to identify an arrival condition report (Perishable - subsistence/DD1691).

RC Request for Cause and Corrective Action Report

Code Value Implementation Note:

Use to identify stevedore damage and recovery action reports.

S1 Supply and Shipment Status Report

Code Value Implementation Note:

Use to identify the DD1348-1, material release order, or other document relating to the release of material by the shipper.

S8 Report of Findings

Code Value Implementation Note:

Use to identify a report of events.

SM Shipping Manifests

Code Value Implementation Note:

Use to identify a cargo manifest (DD1385).

SV Survey

Code Value Implementation Note:

Use to identify cargo survey reports.

XP Photographs

Code Value Implementation Note:

Use to indicate photographs.

Optional

PWK02 756 Report Transmission Code O ID 1/2
Code defining timing, transmission method or format by which reports are to be sent

Implementation Note:

Use to identify the means by which the submitter will transmit supporting documentation to the action party.

BE By Mail and Electronically

BM By Mail

EL Electronically Only

FX By Fax

Optional

PWK03 757 Report Copies Needed O NO 1/2
The number of copies of a report that should be sent to the addressee.

Implementation Note:

Use in conjunction with PWK01 to identify the number of individual documents being forwarded. For example, 3 - SF361 sets, 1 - Temperature chart, 3 - GBLs, etc. This does not represent the number of copies of an individual document.

Optional	PWK04	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual P1 Preparer Code Value Implementation Note: <i>Use with PWK05 to identify the preparer of the document.</i>	O	ID	2/2
Conditional	PWK05	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). Implementation Notes: 1. <i>Use to identify the organization that prepared the report.</i> 2. <i>Use to indicate information relating to moving the documentation.</i> 1 D-U-N-S Number, Dun & Bradstreet Code Value Implementation Note: <i>Use with PWK02 code DF to indicated the DUNS number of the commercial carrier moving the documentation. Use only if CAGE code is not available.</i> 10 Department of Defense Activity Address Code (DODAAC) 12 Telephone Number (Phone) Code Value Implementation Note: <i>Use with PWK02 code FX. PWK06 will carry the FAX number the documentation was sent to.</i> 2 Standard Carrier Alpha Code (SCAC) 20 Standard Point Location Code (SPLC) 27 Government Bill Of Lading Office Code (GBLOC) 33 Commercial and Government Entity (CAGE) Code Value Implementation Note: <i>Use to identify the organization that prepared the report.</i> A2 Military Assistance Program Address Code (MAPAC) M4 Department of Defense Routing Identifier Code (RIC) Code Value Implementation Note: <i>Use in reports to indicate the Routing Indicator Code for a DoD activity.</i>	C	ID	1/2
Conditional	PWK06	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Optional	PWK07	352	Description A free-form description to clarify the related data elements and their content. Implementation Notes: 1. <i>Use to identify a unique identification number for the attachment.</i> 2. <i>Use with PWK01 code AE, to briefly describe the type of document.</i>	O	AN	1/80
Not Used	PWK08	C002	ACTIONS INDICATED	O		

Optional

Segment: REF Reference Numbers

Level: Header

Loop: PWK

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Use to provide amplifying information for the discrepancy in the CORS.
2. Use to identify ship status and other indicators.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2
	44	End Use Number			
		Code Value Implementation Note: Use the applicable code(s) from below in REF02 to identify the proper data. Use up to four individual occurrences as needed (max one from each group).			
		<i>Ship Status - DD470 block 4.</i>			
		A. USNS			
		B. USS			
		C. CAA			
		<i>Commercial:</i>			
		D. Voyage Charter			
		E. Berth Term			
		F. Shipping Contract			
		G. Time Charter			
		<i>Unloading Cost Chargeable - DD470 block 10.</i>			
		H. Ship			
		I. Cargo			
		<i>Cargo Discharged By - DD470 block 11.</i>			
		J. Military Contract Personnel			
		K. Ship Operator or his Agent			
		L. Recipient government (MAP/AID shipment)			
		L1 Letters or Notes			

Code Value Implementation Note:

Use to indicate a note. Use the appropriate code from the following list in REF02 to indicate the type of note. Use REF03 to provide amplifying information.

N. New note

C. Continuation of note

Conditional

REF02 127 **Reference Number** C AN 1/30
 Reference number or identification number as defined for a particular
 Transaction Set, or as specified by the Reference Number Qualifier.

Implementation Note:

Use the appropriate code from REF01.

Conditional

REF03 352 **Description** C AN 1/80
 A free-form description to clarify the related data elements and their content.

Implementation Note:

Must use when REF02 is L1 to provide the amplifying information.

Segment: DTM Date/Time Reference
Level: Header
Loop: PWK
Usage: Optional
Max Use: >1
Purpose: To specify pertinent dates and times
Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
 2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use in CORS only, to identify the date/time of cargo discharge. Use two occurrences of this segment to identify the start/completion times.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 196 Start 197 End	M	ID	3/3
Conditional	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Conditional	DTM03	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Implementation Note:

Express the activity's time in GMT. Express the time in a four position (HHMM) format.

Required

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Must use this 1/N1/120 loop in all reports and responses, to identify the organization preparing the report and the organization responsible for answering the report.

2. Use to identify additional organizations associated with the report. For example, the organization re-routing the report to a new or additional recipients, and the organization(s) designated to receive a copy of the report.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
	41	Submitter	
		Code Value Implementation Note: Must use in reports, to indicate the organization originating/preparing the report. For RFI/TDRs associated with a CORS, use 2/N1/280 code P1.	
	7L	Preliminary Inspection Location	
		Code Value Implementation Note: Use in CORS to indicate the original destination when cargo is diverted to a port other than the one on the manifest.	
	91	Action Party	
		Code Value Implementation Note: Must use in all reports and responses, to indicate the organization responsible for processing the report and providing a response (action point).	
	92	Support Party	
		Code Value Implementation Note: Use in reports and responses to indicate the organization to act as a support point as assigned by the action point.	
	AA	Authority For Shipment	
		Code Value Implementation Note: Use in RFI/TDRs associated with a CORS, to indicate the activity directing the carrier (Ship). For example MTMC-EA.	

C4 Contract Administration Office

Code Value Implementation Note:

Use when necessary, to indicate the contract administration office

CA Carrier

Code Value Implementation Note:

Use in CORS reports, to identify the carrier of the discrepant shipment.

CN Consignee

Code Value Implementation Note:

Use to identify the consignee when different from the activity identified by code 41 (Submitter). The consignee is the activity designated by the transportation document to receive the shipment.

FA Facility

Code Value Implementation Note:

Use in CORS to indicate a code list for Water Port Identifier Code. See Data Element 1270 Code 37.

IC Intermediate Consignee

Code Value Implementation Note:

Use in RFI/TDR to indicate an intermediate consignee as a trans-shipping activity.

LP Loading Party

Code Value Implementation Note:

Use in CORS to indicate the loading activity.

PK Party to Receive Copy

Code Value Implementation Note:

Use multiple occurrences as needed to indicate the organization(s) to receive a copy.

RG Responsible Installation, Origin

Code Value Implementation Note:

Use in CORS to indicate the loading port.

RH Responsible Installation, Destination

Code Value Implementation Note:

Use in CORS to indicate the discharging port.

SH Shipper

Code Value Implementation Note:

Use in reports, to indicate the original organization making physical shipment of the material. This could be a supply depot or a contractor facility.

UP Unloading Party

Code Value Implementation Note:

Use in CORS to identify the discharging activity.

Z6 Transferring Party

Code Value Implementation Note:

Use in SDR/RFI and TDR reports, to indicate an activity that received a mis-directed shipment and redirected it to the correct activity. Use 1/DTM/040 code 330 to indicate the date.

ZL Party Passing the Transaction

Code Value Implementation Note:

Use in reports and responses to indicate an incorrect action/support point receiving a response. Indicate the date the response is forwarded to the correct organization 1/DTM/040.

ZP Gaining Inventory Manager

Code Value Implementation Note:

Use in SDR/PQDR for logistics reassignment to identify the gaining inventory manager as an additional recipient of the report.

ZQ Screening Point**Code Value Implementation Note:**

Use in PQDRs to indicate the organization acting as screening point.

Conditional

N102 93 Name C AN 1/35
Free-form name.

Implementation Note:

Use only when the designated activity does not have a coded address. Use for in-the-clear text name of the organization.

Required

N103 66 Identification Code Qualifier C ID 1/2
Code designating the system/method of code structure used for Identification Code (67).

1 D-U-N-S Number, Dun & Bradstreet

10 Department of Defense Activity Address Code (DODAAC)

2 Standard Carrier Alpha Code (SCAC)

20 Standard Point Location Code (SPLC)

27 Government Bill Of Lading Office Code (GBLOC)

33 Commercial and Government Entity (CAGE)

Code Value Implementation Note:

Use only when the designated activity is a contractor not assigned a DoDAAC.

A2 Military Assistance Program Address Code (MAPAC)

M4 Department of Defense Routing Identifier Code (RIC)

Code Value Implementation Note:

Use in reports to indicate the Routing Indicator Code for a DoD activity.

Required

N104 67 Identification Code C AN 2/20
Code identifying a party or other code.

Not Used

N105 706 Entity Relationship Code O ID 2/2

Optional

N106 98 Entity Identifier Code O ID 2/2
Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/120 code to indicate the organizations sending and receiving the transaction set.

FR Message From**Code Value Implementation Note:**

Use to indicate that the organization cited in N104 transmitted the transaction set.

In an original transmission of a report or response, this will be the preparing organization.

TO Message To**Code Value Implementation Note:**

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: N2 Additional Name Information

Level: Header

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To specify additional names or those longer than 35 characters in length

Implementation Note:

Use only if N102 is used and is insufficient to identify the organization.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N201	93	Name Free-form name.	M	AN	1/35
Optional	N202	93	Name Free-form name.	O	AN	1/35

Optional

Segment: N3 Address Information

Level: Header

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To specify the location of the named party

Implementation Note:

Use only if N102 is used, except to provide specific geographic location/port information.

Use to provide street, PO box number, or other address information.

Data Element Summary

Mandatory

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N301	166	Address Information Address information	M	AN	1/35
N302	166	Address Information Address information	O	AN	1/35

Segment: N4 Geographic Location
Level: Header
Loop: N1
Usage: Optional
Max Use: 1
Purpose: To specify the geographic place of the named party
Syntax: C0605 — If N406 is present, then N405 is required.
Comments: 1. A combination of either N401 through N404 (or N405 and N406) may be adequate to specify a location.
 2. N402 is required only if city name (N401) is in the USA or Canada.

Implementation Note:

Use only if N102 is used, except to provide specific geographic location/port information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	N401	19	City Name Free-form text for city name.	O	AN	2/30
Optional	N402	156	State or Province Code Code (Standard State/Province) as defined by appropriate government agency.	O	ID	2/2
Optional	N403	116	Postal Code Code defining international postal zone code excluding punctuation and blanks (zip code for United States).	O	ID	3/11
Optional	N404	26	Country Code Code identifying the country.	O	ID	2/3
Implementation Note: <i>Use only if an organization is outside the U.S.</i>						
Conditional	N405	309	Location Qualifier Code identifying type of location.	C	ID	1/2
Optional	N406	310	Location Identifier Code which identifies a specific location.	O	AN	1/30

Optional

Segment: PER Administrative Communications Contact**Level:** Header**Loop:** N1**Usage:** Optional**Max Use:** >1**Purpose:** To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.

2. P0506 — If either PER05 or PER06 is present, then the other is required.

3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Must use at least one occurrence in all reports in conjunction with 1/N101/120 code 41 to identify the report preparer.
Also use with 1/N1/020 code ZQ in a PQDR to identify the individual at the screening point who receives the report/response.
2. Use to identify a point of contact and multiple communication numbers. When using multiple occurrences to identify different communication numbers for a single point of contact, repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named.	M ID 2/2
		AL Alternate Contact	
		Code Value Implementation Note: Use only in subsequent occurrences to identify alternate points of contact or alternate communication numbers.	
		AU Report Authorizer	
		Code Value Implementation Note: Use to indicate the name of the individual at the reporting activity who reviewed the deficiency/discrepancy report if different from the party identified by code PU.	
		CE Certifier	
		Code Value Implementation Note: Use in CORS to identify the individual certifying the DD470.	
		IC Information Contact	
		Code Value Implementation Note: Use to identify person to be contacted if different from the preparing official and with 1/N101/120 codes other than 41 and ZQ. Also use with code CA to individual contacted in a carriers organization.	
		PU Report Preparer	
		Code Value Implementation Note: Must use with N101 code 41 to identify the individual preparing the report.	

QC Quality Coordinator

Code Value Implementation Note:

Use in PQDRs in conjunction with N101 code ZQ to identify the individual at the screening point who reviewed the PQDR prior to forwarding it to the action point.

RP Responsible Person

Code Value Implementation Note:

Use in TDRs in Report loop, in a second PER occurrence when N101 is code 41, to indicate an additional level of review at the reporting activity.

Required

PER02 93 Name **O AN 1/35**
Free-form name.

Implementation Note:

Provide the last name, first name, middle initial, and rate/rank/title, as required, of individual named as point of contact. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Required

PER03 365 Communication Number Qualifier **C ID 2/2**
Code identifying the type of communication number.

Implementation Notes:

1. Use to identify the preferred method of communication in the first occurrence. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional occurrences of this PER segment to identify more than three numbers.

2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city codes as needed.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Required	PER04	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
Conditional	PER05	365	Communication Number Qualifier Code identifying the type of communication number.	C	ID	2/2

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified point of contact.

2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER03 is code AU, IT, TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city codes as needed.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional	PER06	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
Conditional	PER07	365	Communication Number Qualifier Code identifying the type of communication number.	X	ID	2/2

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified point of contact.

2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER05 is AU, IT, or TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city codes as needed.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional

PER08 364 Communication Number X AN 1/80
Complete communications number including country or area code when applicable.

Optional

PER09 443 Contact Inquiry Reference O AN 1/20
Additional reference number or description to clarify a contact number.

Implementation Note:

Use as needed to identify the office symbol code for the preparing official.

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. The Implementation Notes for the transaction set hierarchical data structure are in two parts:

Part I (note 2), provides the hierarchical data structure for the Supply Discrepancy Report (SDR) and Product Quality Deficiency Report (PQDR) reporting processes.

Part II (notes 3 and 4), provide the hierarchical data structure for the Transportation Discrepancy Reporting (TDR) process.

2. Part I. The following paragraphs pertain to the hierarchical data structure for the SDR/PQDR reporting process.

A. The transaction set hierarchical data structure is:

1. Report loop (which is understood to be either a PQDR report or response or a SDR report or response based on the BNR coding)
2. Item loop(s)
3. Unique Item Tracking (serial) number loop(s).

B. Each 842 transaction set can transmit one or more PQDRs/SDRs. Each occurrence of a 2/HL010 Report loop represents a single PQDR/SDR.

Each report loop must contain a single deficient item identified by a single subordinate Item loop. Within the Item loop, there must be one or more 2/NCD/340 loops, each of which describes a single deficiency/discrepancy. Each Item loop may contain one or more subordinate UIT/lot number loops associated with the deficient item. Each 2/NCD/340 loop describes a single UIT/lot number and related information to further describe the deficiency.

C. When the transaction set is used as an SDR or PQDR response, the transaction set will retain the same structure as it was received. Each 2/NCD/230 discrepancy loop iteration in the report will contain response data within that same loop and/or one or more nested 2/NCA/340 loops in the response. UIT/lot number data will be contained in child 2/HL/010 loops subordinate to the appropriate 2/NCD/230 loops in the parent report loop. This will associate response results/actions to specific UIT/lot numbers. Each 2/HL/010 iteration represents a decision related to an item included in a discrepancy report. Each Report loop iteration is considered a parent loop for which a single, or multiple, actions can be defined within each 2/NCA/340 loop iteration. Each 2/NCA/340 loop is directly related to the reported discrepancy which was identified in a 2/NCD/230 loop iteration. Each UIT number loop iteration of the 2/HL/010 loop is considered a child loop which identifies a single UIT (or lot) number and associated information related to each 2/NCD/230 loop iteration. If UIT number (or lot number) information is not required, then no child loops are defined.

3. Part II. The following paragraphs pertain to the hierarchical data structure for the TDR process.

A. The transaction set hierarchical data structure is

1. Report loop (which is understood to be either a CORS, RFI or TDR report or response based on the BNR coding). The type of report (original and follow-up types) is defined using the 2/REF/070 segment.
2. Pack loop(s)
3. Subpack loop(s)
4. Shipment Unit loop(s)
5. Item loop(s)
6. Unique Item Tracking (UIT) number/Lot number loop(s).

B. Each 842 transaction set can transmit a CORS with one or more associated TDRs or one or more RFIs or TDRs. Each occurrence of a 2/HL/010 Report loop represents a single RFI/TDR. The 2/HL/010 looping structure provides for up to three levels of consolidation (Pack, Subpack, and Shipment Unit) in a particular shipment.

The Report loop may contain a single subordinate Pack loop or one or more subordinate Shipment Unit loops.

If used, the Pack loop may contain one or more subordinate Subpack loops or one or more subordinate Shipment Unit loops.

If used, A Subpack loop must contain one or more subordinate Shipment Unit loops. Shipment Unit loops may contain one or more Item loops.

If used, each Item loop may contain one or more subordinate UIT/lot number loops and related information to further describe the deficiency.

Within any of all of the above loop types, there may be one or more 2/NCD/340 loops, each of which describes a single deficiency/discrepancy. There must be at least one 2/NCD/340 loop at some level.

C. Use Pack, Subpack, Shipment Unit and Item loops to identify shipment units (TCNs) and to describe levels of consolidation of these units as needed. Shipment Unit loops are always used. When consolidation occurs, they represent the lowest level of consolidation. Pack loop(s) with subordinate Shipment Unit loop(s) are used to describe two levels of consolidation. Pack Subpack, and Shipment Unit loop(s) are used to describe three levels of consolidation.

Each Pack, Subpack, and Shipment Unit loop must be associated with a single TCN. All items are part of the parent TCN. Note - the TCN representing the highest level of consolidation will be the same TCN as identified in the Pack loop.

D. EXAMPLE 1: A SEAVAN containing two pallets, the first pallet containing two boxes, each with a TCN, and a second pallet containing three boxes, each with a TCN and containing two items each with UIT numbers. This scenario would utilize 20 iterations of this 2/HL/010 loop structured as: One Report loop, one Pack loop with the TCN from the SEAVAN.

The first Subpack loop with the TCN from the first pallet.

Two Shipment Unit loops with the TCN from each of the two boxes.

Note in this scenario, the box contents could be separately identified using Item loops if the items were known. The second Subpack loop with the TCN from the second pallet.

Two Shipment Unit loops with the TCN from each of the two boxes.

Two Item loops under each shipment unit for the items in the boxes.

Two UIT/Lot number loops under each Item loop.

E. EXAMPLE 2: A pallet containing an aircraft engine would be structured as:

A single Report loop

A single Shipment Unit loop with the TCN

A single Item loop with the NSN or part number

A single UIT/Lot number loop with the engine UIT number.

4. When the transaction set is used as a response, the transaction set will retain the same structure as it was received. Each 2/NCD/230 discrepancy loop iteration in the report will contain response data within the same loop and/or one or more nested 2/NCA/340 loops in the response. UIT/lot number data will be contained in child 2/HL/010 loops subordinate to the appropriate 2/NCD/230 loops in the parent report loop. This will associate response results/actions to specific UIT/lot numbers. Each 2/HL/020 iteration represents a decision related to an item included in a discrepancy report. Each report loop iteration is considered a parent loop for which a single, or multiple actions can be defined within each 2/NCA/340 loop iteration. Each 2/NCA/340 loop is directly related to the reported discrepancy which was identified in a 2/NCD/230 loop iteration. Each UIT/lot number loop iteration of the 2/HL/010 loop is considered a child loop which identifies a single UIT/lot number and associated information related to each 2/NCD/230 loop iteration. If UIT/lot number information is not required, then no child loops are defined.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O AN 1/12
----------	------	-----	---	-----------

Implementation Notes:

1. Use the appropriate loop level to indicate the parent loop for which the subsequent information applies.
2. Use to identify the HL01 sequence number of the loop which is the parent loop to the current HL loop. Citing the applicable information in this fashion provides a cross reference between the parent loop and the child loop with associated discrepant items and UIT/lot numbers if needed.
3. Do not use in Report loops.

Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure.	M ID 1/2
-----------	------	-----	--	----------

Implementation Note:

Select a code to indicate the type of loop in the current iteration of the 2/HL/010 loop.

I Item

Code Value Implementation Note:

Use in reports/responses to indicate an Item loop that describes the discrepant material. Item loops may have either a Report or Shipment Unit (RFI/TDR) loop as a parent. Item loops may have UIT loops as child loops.

P Pack

Code Value Implementation Note:

Use in RFI/TDRs to indicate a Pack loop. If present, a Pack loop must have a Report loop as a parent. Each Pack loop must have at least one subordinate Subpack or Shipment Unit loop.

Q Subpack

Code Value Implementation Note:

Use in RFI/TDRs to indicate a Subpack loop to describe three levels of consolidation. If present, a Subpack loop must have a Pack loop as its parent. Each Subpack loop must have at least one subordinate (child) Shipment Unit loop.

RP Report

Code Value Implementation Note:

Must use in all reports/responses to indicate the Report loop. The Report loop must be the first iteration of the 2/HL/010 loop. The Report loop must have at least one subordinate Pack, Shipment Unit or Item loop.

UT Unit or Lot

Code Value Implementation Note:

Must use in RFI/TDRs to indicate a Shipment Unit loop to describe a shipment unit. A Shipment Unit loop may have a Report, Pack or Subpack loop as a parent. Shipment Unit loops may have zero or more subordinate Item loops.

X Serial Number

Code Value Implementation Note:

Use to identify a Unique Item Tracking (UIT)/lot number loop(s) related to a report or response. A UIT/lot number loop is considered to be a child loop of an Item loop and cannot have a subordinate loop.

UIT number loop iterations utilize only the segments listed below:

2/NCD/230

2/DTM/250

2/REF/260

Not Used

HL04 736 Hierarchical Child Code

O ID 1/1

Required

Segment: LIN Item Identification

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

Comments: 1. See the Data Dictionary for a complete list of ID's.

2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Note:

Must use in report and response Item loops, to identify the discrepant item. For SDR reports identifying receipt of a wrong item or unacceptable substitute, use this 2/LIN/020 segment to identify the item AS ORDERED. Use the 2/RC/275 segment to identify the incorrect item that was received. Also use the LIN segment to identify reference data associated with the end item. Use 2/REF/070 for data associated with the next higher assembly.

Data Element Summary

Not Used

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LIN01	350	Assigned Identification	O AN 1/11

Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
	Implementation Notes: 1. LIN02/03 is required to provide the PRIMARY material identification number (NSN where possible). LIN04/05 - LIN18/19 may be used as needed to provide additional item identification. 2. Use LIN02/03 in reports and responses. 3. In each 2/HL/010 Item loop, one of the following codes must be used in LIN02: CN, FS, FT, or MG. CN Commodity Name Code Value Implementation Note: Use to identify the nomenclature of the discrepant item. Must use in LIN02 when no identifying NSN, part number or supply class can be determined. Use is recommended and carried in subsequent 234/235 pairs when NSN and/or part number are available. Also use in RFI/TDR to identify the discrepant unit when not specifically identified to an identifiable item. (e.g., a multi-pack or pallet). FS National Stock Number Code Value Implementation Note: Must use to identify the NSN of the item when known. FT Federal Supply Classification Code Value Implementation Note: Use in reports to indicate the FSC when used in lieu of a NSN for primary material identification. For example, when used to identify the FSC for a type of plate steel. MG Manufacturer's Part Number Code Value Implementation Note: Use is required when known, and a NSN is not available. Use of code MG in LIN04/05 is recommended even when an NSN is available.					
Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Conditional	LIN04	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2
Implementation Note: Use to further identify an item. Also use to identify end item data. Use 2/REF/070 to identify next higher assembly data. Codes in LIN04/05, 06/07, etc. need not be presented in any specific order. Multiple codes are listed in LIN04 to identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data. AC Aggregation Code (Used to Consolidate Part Families) Code Value Implementation Note: Use in reports to indicate a Material Management Aggregation Code (MMAC) for an item. CN Commodity Name Code Value Implementation Note: Use to identify the nomenclature of the discrepant item. Use in LIN04/05 or later pairs only when a NSN, part number or supply class is identified in LIN02/03. EM Equipment Identification Number Code Value Implementation Note: Use in reports to identify the equipment identification code of the deficient material or discrepant item. F7 End-Item Description						

Code Value Implementation Note:

Use in reports to provide the end item nomenclature/description.

KF Item Type Number

Code Value Implementation Note:

Use in reports to indicate a Material Management Aggregation Code (MMAC) for an end item.

KI Cognizance Symbol

Code Value Implementation Note:

Use in reports to indicate the material cognizance symbol (COG) of the discrepant item. Enter NSL for non-stock number listed items.

KK Special Material Identification Code

Code Value Implementation Note:

Use in reports to identify the Special Material Identification Code of the discrepant item.

KL Item Management Code

Code Value Implementation Note:

Use in reports indicate the material cognizance symbol (COG) for an end item. Enter NSL for non-stock number listed items.

MT Major Product/Material/Machine Type

Code Value Implementation Note:

Use in reports to identify the Special Material Identification Code (SMIC) of an end item.

PN Company Part Number

Code Value Implementation Note:

Use in reports to identify the manufacturers part number of the end item.

SD Supplier Company Registry Number

Code Value Implementation Note:

Use in reports to indicate the Commercial and Government (CAGE) code for the manufacturer of an end item.

SW Stock Number

Code Value Implementation Note:

Use in reports to indicate the the NSN for an end item.

W1 End Item Serial Number

Code Value Implementation Note:

Use in reports to identify the end item UTT number.

W2 Work Unit Number

Code Value Implementation Note:

Use in reports to identify the work unit code of the deficient material.

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Must use in reports and responses, to identify the manufacturer of an item when an NSN is not available and recommended in reports even when an NSN is available.

Conditional	LIN05	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40

Optional

Segment: PID Product/Item Description

Level: Detail

Loop: HL

Usage: Optional

Max Use: >1

Purpose: To describe a product or process in coded or free-form format

- Syntax:**
1. C0403 — If PID04 is present, then PID03 is required.
 2. R0405 — At least one of PID04 or PID05 is required.
 3. C0703 — If PID07 is present, then PID03 is required.
 4. C0803 — If PID08 is present, then PID03 is required.

- Semantic:**
1. Use PID03 to indicate the organization that publishes the code list being referred to.
 2. PID04 should be used for industry-specific product description codes.
 3. PID08 describes the physical characteristics of the product identified in PID04. A "Y" indicates that the specified attribute applies to this item. A "N" indicates it does not apply. Any other value is indeterminate.

- Comments:**
1. If PID01 = "F", then PID05 is used. If PID01 = "S", then PID04 is used. If PID01 = "X", then both PID04 and PID05 are used.
 2. Use PID06 when necessary to refer to the product surface or layer being described in the segment.
 3. PID07 specifies the individual code list of the agency specified in PID03.

Implementation Notes:

1. Must use PQDR reports, in Item loops, to further describe material reported in 2/LIN/020. Use in other reports as necessary.
2. Use 2/N101/280 (code 30) when needed to identify the organization associated with the material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	PID01	349	Item Description Type Code indicating the format of a description. F Free-form	M	ID	1/1
Not Used	PID02	750	Product/Process Characteristic Code	O	ID	2/3
Not Used	PID03	559	Agency Qualifier Code	C	ID	2/2
Not Used	PID04	751	Product Description Code	C	AN	1/12
Required	PID05	352	Description A free-form description to clarify the related data elements and their content.	C	AN	1/80

Implementation Notes:

1. Use the appropriate codes to further characterize the material identified in 2/LIN/020. One of the first three, second three, and last three letter codes must be used in the sequence identified below. For example new, non-GFM material that is not under warranty would be identified as "AEG".

2. A - Use to identify reported material as new material.
3. B - Use to identify material as repaired material.
4. C - Use to identify material as overhauled material.
5. D - Use to identify material as Government furnished material (GFM) when the report is submitted by a commercial organization or the supporting contract administration office.
6. E - Use to identify material as non-GFM.
7. F - Use to identify material as not government owned.
8. G - Use to identify material as under warranty.
9. H - Use to identify material as not covered under a warranty.
10. I - Use when it is not known if material is covered under warranty.

Not Used	PID06	752	Surface/Layer/Position Code	O	ID	2/2
Not Used	PID07	822	Source Subqualifier	O	AN	1/15
Not Used	PID08	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: DTM Date/Time Reference**Level:** Detail**Loop:** HL**Usage:** Optional**Max Use:** >1**Purpose:** To specify pertinent dates and times**Syntax:** 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.**Implementation Note:**

Use multiple occurrences as needed in 2/HL/010 Report loops (unless otherwise indicated), to identify various dates associated with the deficient/discrepant material and the report/response.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M ID 3/3
	003	Invoice	
		Code Value Implementation Note: Use in SDR/PQDR reports, in Item loops, to indicate the date of the vendor's invoice.	
	009	Process	
		Code Value Implementation Note: Use in PQDR reports, to indicate the date the screening point forwards the report to the action point.	
	011	Shipped	
		Code Value Implementation Note: Use in RFI/TDR and FMS SDR reports to indicate the date a carrier signed for a shipment.	
	022	Freight Bill	
		Code Value Implementation Note: Use in FMS SDR reports to indicate the date of the shipper's bill.	
	041	Status (Prior and Including)	
		Code Value Implementation Note: Use in SDR/PQDR responses to indicate the date of the interim response.	
	043	Publication	
		Code Value Implementation Note: Use in PQDR to indicate the date of the technical manual identified in 2/REF01/070 code NJ.	
	050	Received	
		Code Value Implementation Note: Use in reports to identify the date consignee received the shipment (tailgate date).	
	094	Manufacture	
		Code Value Implementation Note: Use in PQDR reports, in the Item loop, to indicate the date that the material was manufactured.	
	115	Sample Available	

Code Value Implementation Note:

Use in petroleum PQDR to indicate the date of the sample provided in code XO (code 3K is used until the next X-12 version/release).

146 Closing Date

Code Value Implementation Note:

Use in responses when the investigation is completed.

A TDR may only be closed by the originator.

A SDR/PQDR may only be closed by the Action point.

214 Date of Repair/Service

Code Value Implementation Note:

Use in PQDR reports, in Item loops, to indicate the date that the material was repaired.

234 Settlement Date

Code Value Implementation Note:

Use in TDR responses to indicate the date DFAS closed claim action.

282 Previous Report

Code Value Implementation Note:

Use only in cancellations, modifications and follow-up reports in the Report loop, to indicated the date of the original report or most recent change.

512 Warranty Expiration

Code Value Implementation Note:

Use in PQDR reports, in the Item loop, to indicate the material warranty expiration date. Use only if 2/PID/030 PID05 contains code H.

513 Overhauled

Code Value Implementation Note:

Use in PQDR reports, in the Item loop, to indicate the date the material was last overhauled. Use only if 2/PID05/030 contains code C.

515 Notified

Code Value Implementation Note:

Use in RFI/TDR reports, to identify the date a carrier was notified of the discrepancy.

516 Discovered

Code Value Implementation Note:

Use in all reports, to indicate the date a deficiency/discrepancy was discovered.

517 Inspected

Code Value Implementation Note:

Use in reports, to indicate when the material was inspected.

585 Report

Code Value Implementation Note:

Must use only when 1/BNR06/020 is code CU, to indicate the report date for individual TDRs associated with a CORS. Use to indicate the date of the report. Do not use with modifications, additions, cancellations, or follow up reports.

621 Reported

Code Value Implementation Note:

Must use in TDRs, to identify the report date for Part II of the TDR.

824 Version

Code Value Implementation Note:

Use with 2/REF/070 code NL to indicate the date of the technical order.

842 • MATERIAL & TRANSPORTATION DISCREPANCIES
DTM • DATE/TIME REFERENCE

DOD 4000.25-M Vol 2
ASC X12 VERSION/RELEASE 0030501DLMS2.0

Required

Segment: REF Reference Numbers

Level: Detail

Loop: HL

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Must use in all reports and responses in the loop indicated, to identify the discrepancy report control number, and where possible, the unique DRS ID, transaction number and suffix as appropriate, which resulted in the discrepancy.
2. Use multiple occurrences as needed in all reports, to identify additional reference numbers associated with a discrepancy/deficiency.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

06 System Number

Code Value Implementation Note:

Use in PQDR Reports in the Item loop, to identify the system within the engine or aircraft that was found defective.

16 Military Interdepartmental Purchase Request (MIPR) Number

Code Value Implementation Note:

Use in PQDR/SDR reports in the Item loop, to identify the MIPR Number.

3K Petroleum Pool Code

Code Value Implementation Note:

Use in petroleum PQDR reports in the Item loop, to identify the sample number. Use REF03 to identify the sample type. Use 2/DTM/060 code 115 to identify the sample date. (The code, XO - Sample Number will be used when available in the next X-12 version/release.

51 Picture Number

Code Value Implementation Note:

Use with code NJ or NL to indicate a figure number in the manual or technical order.

5G Complaint

Code Value Implementation Note:

Must use in all reports and responses in the Report loop, to indicate the unique report control (RCN) number of the deficiency/discrepancy being submitted or being referred to in any other type of report or response. Use REF02 to identify the RCN and REF03 the type of report code.

87 Functional Category

Code Value Implementation Note:

Use in reports in the Item loop, to indicate the type of activity which detected the reported deficiency or failure (Utilization Code).

AF Airlines Flight Identification Number

Code Value Implementation Note:

Use in RFI/TDR reports in the Report loop, to indicate the flight (Commercial or military) number.

AW Air Waybill Number

Code Value Implementation Note:

Use in reports in the Report loop, to indicate the air waybill number used to control the movement of the material being reported.

BL Government Bill of Lading

Code Value Implementation Note:

Use in reports in the Report loop, to indicate the Government bill of lading number used to control the movement of the material being reported.

BM Bill of Lading Number

Code Value Implementation Note:

Use in reports in the Report loop, to indicate the commercial bill of lading number used to control the movement of the material being reported.

BY Repair Category Number

Code Value Implementation Note:

Use in reports in Item loops to indicate a Consumable Repairable Code that indicates if the item is Depot Level Repairable, consumable, or end item.

BZ Complaint Code

Code Value Implementation Note:

Use to identify the discrepancy report type (including the safety category I or II for PQDR).

CN Carrier's Reference Number (PRO/Invoice)

Code Value Implementation Note:

Use in reports, in the Report loop, to indicate a carrier's Pro or Freight bill number.

D8 Loss Report Number

Code Value Implementation Note:

Use in PQDR reports in the Item loop, to identify the loss code.

DM Associated Product Number

Code Value Implementation Note:

Use in reports in Item loops to indicate a Material Management Aggregation Code (MMAC) for a next higher assembly.

EQ Equipment Number

Code Value Implementation Note:

Use in RFI/TDR in Report loops to indicate the identifying number of the truck or rail car that the material was carried in.

IZ Insured Parcel Post Number

Code Value Implementation Note:

Use in reports in the Item loop, to indicate the control number.

K2 Certified Mail Number

Code Value Implementation Note:

Use in reports in the Item loop, to indicate the control number.

K3 Registered Mail Number

Code Value Implementation Note:

Use in reports in the Item loop, to indicate the control number.

KK Delivery Reference

Code Value Implementation Note:

Use in RFI/TDR reports in Report loops, to indicate if the exception was noted on the carriers delivery receipt. Use REF02 to indicate, Y if yes and N if no. If N is indicated, use REF03 to provide the reason.

ME Message Address or ID

Code Value Implementation Note:

Use in PQDR to indicate the Category I message date/time group.

MF Manufacturers Part Number

Code Value Implementation Note:

Use in SDR reports in Item loops to identify the component part number. Use REF01 code W7 to identify the manufacturer.

MK Manifest Key Number

Code Value Implementation Note:

Use in reports in the appropriate loop for the level of consolidation.

MR Merchandise Type Code

Code Value Implementation Note:

Use in reports in Item loops to indicate the nomenclature of a next higher assembly. Use REF03 if necessary for additional description.

NJ Technical Document Number

Code Value Implementation Note:

Use in PQDR reports in Item loops, to identify the Technical Manual number. Use REF03 to indicate the change number.

Use code PG to identify the page number and item number. Use code 51 to identify the figure number. Use 2/DTM/060 code 43 to identify the date of the technical manual.

NL Technical Order Number

Code Value Implementation Note:

Use in PQDR reports in Item loops, to indicate the Technical Order number. Use REF03 to indicate the change number. Use code PG to identify the page number and item number. Use code 51 to identify the figure number. Use 2/DTM/060 code 824 to identify the date of the technical order.

NN Nonconformance Report Number

Code Value Implementation Note:

Must use in reports and responses in Report loops, to indicate (when known) the unique Discrepancy Reporting System Identification Number for any complaint.

NS National Stock Number

Code Value Implementation Note:

Use in SDR, in Item loops to identify the component NSN.

OB Ocean Bill of Lading

Code Value Implementation Note:

Use in reports, in the loop for the appropriate level of consolidation, to indicate an ocean bill of lading used to control the movement of the material being reported.

OC Ocean Container Number

Code Value Implementation Note:

Use in RFI/TDR in the loop for the appropriate level of consolidation, to indicate the number of the SEAVAN that the material was contained in. Use REF03 to identify the SEAVAN owner.

P7 Product Line Number

Code Value Implementation Note:

Use in reports in Item loops to identify the Special Material Identification Code for a next higher assembly.

P9 Page Number

Code Value Implementation Note:

Use with code NJ or NL to indicate the applicable page number of the manual. Use REF03 to indicate the item number.

PG Product Group

Code Value Implementation Note:

Use in reports in Item loops to indicate the material cognizance of a next higher assembly.

PM Part Number

Code Value Implementation Note:

Use in SDR/PQDR reports in the Item loop to identify the part number of a next higher assembly.

S3 Specification Number

Code Value Implementation Note:

Use in petroleum PQDR in the Item loop, to identify the specification number.

S6 Stock Number

Code Value Implementation Note:

Use in SDR/PQDR reports in the Item loop to indicate the national stock number for a next higher assembly.

SE Serial Number

Code Value Implementation Note:

Use in reports in Item loops to identify the UIT number of a next higher assembly.

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Use in reports in Item loops as needed to distinguish a single shipment number assigned by a vendor when multiple shipments have been made by a contractor for a single contract line item.

SN Seal Number

Code Value Implementation Note:

Use in RFI/TDR in the Report loop, to indicate the container seal number. Use REF03 to indicate the condition of the seal.

SO Shipper's Order (Invoice Number)

Code Value Implementation Note:

Use in reports in the Report loop, to indicate the shipper's (seller) invoice number.

SQ Container Sequence Number

Code Value Implementation Note:

Use in RFI/TDR, in the Report loop, to indicate a trailer or container number that the material was contained in. Use REF03 to identify the owner of the trailer or container.

TN Transaction Reference Number

Code Value Implementation Note:

Must use in Item loop(s) in reports and responses, when available, to indicate the requisitioning organization's transaction number, when the receipt is not processed under a contract number. Either this code or the 2/CS/075 segment must be used in each report to identify the means by which the material was acquired by the receiving party.

TP Test Specification Number

Code Value Implementation Note:

Use in PQDR reports in the Item loop, to indicate the Test Discrepancy Number.

UG U.S. Government Transportation Control Number

Code Value Implementation Note:

Must use in RFI/TDR in the loop for the appropriate level of consolidation, to indicate the TCN used to control movement of the material. Use the TCN applicable to the appropriate level of consolidation. For SDR/PQDR this is the Item Loop. For RFI/TDR this could include, Pack, Subpack and Shipment Unit loop TCNs.

V3 Voyage Number

Code Value Implementation Note:

Use in RFI/TDR in the Report loop, to indicate a shippers voyage number.

W1 Defense Turn-In Document Number

Code Value Implementation Note:

Use in PQDR in the Item loop, to identify the turn in document number.

W2 Weapon System Number

Code Value Implementation Note:

Use in SDR/PQDR reports in the Item loop, to identify the weapon system code.

W4 Procurement Request Number

Code Value Implementation Note:

Use in reports in Item loops, to indicate a Procurement/Purchase Request Number.

W7 Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use in reports in Item loops, to identify the manufacturer of the component part.

W8 Suffix

Code Value Implementation Note:

Must use in reports and responses in conjunction with code TN (when applicable), to further identify a transaction (requisition) which has been split by the ICP for processing when the receipt is not processed under a contract number.

WU Vessel

Code Value Implementation Note:

Use in RFI/TDR in the Report loop, to identify the vessel name. Indicate the vessel name in REF03. If provided, indicate the vessel number in REF02.

WY Waybill Number

Code Value Implementation Note:

Use in reports in the loop for the appropriate level of consolidation, to indicate an Ocean, Rail or Motor (truck) Waybill used to control movement of material. Indicate the number in REF02 and use REF03 to cite the waybill type in REF03 (Ocean, Rail, Motor).

ZM Manufacturer Number

Code Value Implementation Note:

Use in SDR/PQDR reports in the Item loop to identify the Commercial and Government Entity (CAGE) Code for the manufacturer of a next higher assembly.

ZZ Mutually Defined

Code Value Implementation Note:

Use to indicate other type of document not specifically identified in this list. Cite the reference number in REF02 and use REF03 to describe the type of document. (Code XY will be used when available in the next X-12 version release).

Required	REF02	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Conditional	REF03	352	Description	C	AN	1/80
			A free-form description to clarify the related data elements and their content.			

Implementation Notes:

1. Must use in conjunction with REF01 code 5G to identify the type (R or D) of report or follow-up (M, A, C, Q, T, or F) type of report when BNR06 indicates codes DG, QD, QR, RQ, SD, SR, TD, or TR.

Use one of the following letters to identify the specific type/follow-up type of report/response:

R - Original submission of a report.

D - Original submission of an information-only report when a previous PQDR was submitted for the same item and deficiency. Submitted by an originator, or forwarded through the PQDR process by a screening or action point (with or without additional information) to another organization. Screening or action points may convert an R to a D.

M - Modification or correction of a previously submitted report/response.

A - Additional data being submitted related to a previously submitted report/response.

C - Cancellation of a previously submitted report/response.

Q - Query (follow-up) on a previously submitted report for which no acknowledgement or response was received. This transaction may be generated or forwarded by an originator, screening point, or action point.

T - Contested decision provided on a previously submitted report. The originating organization or screening point does not agree with a reply/disposition received in response to the previously submitted SDR or PQDR.

F - Request from an FMS purchaser to the U.S. Government to reconsider the final status provided on a previously reported SDR.

Use one of the following letters in all PQDR/SDR responses when BNR06 is QR or SR, to identify the type of response:

G - Authorization for credit submitted by the action point.

H - Request for additional information submitted or forwarded by a screening point, action point, support point.

I - Interim investigation report submitted by the investigative organization (support point to action point and/or action point to screening point/originator).

J - Final investigation report submitted by the investigative organization (support point to action point and/or action point to screening point/originator).

Use one of the following codes if needed, to further identify a type of RFI/TDR report/response. Use when 1/BNR06/020 is code CU or TD.

INN - Initial Notification. Use only when the RFI preparer is other than the consignee and is being used exclusively to notify the consignee and the carrier.

MIS - Miscellaneous Problems. Use only when the RFI/TDR is being used exclusively to report miscellaneous transportation discrepancies.

2. Use in SDR/PQDR with REF01 code MR, to identify the nomenclature of the next higher assembly. This additional description is limited to 80-characters.

3. Use in RFI/TDR with REF01 code WU to identify the vessel name.

4. Use in RFI/TDR as needed, with REF01 code SN to indicate the condition of the seals. Enter I if seal intact, enter B if broken, enter M if missing or use narrative if description is required.

5. Use in RFI/TDR with REF01 codes OC and SQ to identify the trailer, container, or SEAVAN owner.

6. Use in RFI/TDR with code WY to indicate the type of waybill (Ocean, Rail, Motor).

7. Use in PQDR with codes NL and NJ to indicate the change number.

8. Use in PQDR reports with code P9 to identify the item number from the document identified by code NJ or NL.

Optional

Segment: CS Contract Summary

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

- Semantic:**
1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.
 2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.
 3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.
 4. CS14 is the Unit of Measure stipulated in the contract.
 5. CS15 is the contract line item number (CLIN) unit price specified in the contract.
 6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.
 7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

- Comments:**
1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).
 2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Use in all reports and responses to identify contract information, as appropriate, associated with a receipt discrepancy or material deficiency.
2. Use either CS01 or CS06 (but not both).

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the PIIN of the contract that appears on the purchasing or shipping document, or on the container.

Not Used

CS02	327	Change Order Sequence Number	O AN 1/8
------	-----	------------------------------	----------

Optional	CS03	328	Release Number	O	AN	1/30
			Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.			
			Implementation Note: Use as needed in conjunction with CS01 or CS06 to identify the call or order number, or the call or order number including the respective call or order modification, as applicable.			
Conditional	CS04	128	Reference Number Qualifier	C	ID	2/2
			Code qualifying the Reference Number.			
			Implementation Note: Use the appropriate code, based on the CS01 or CS06 information.			
			83 Extended (or Exhibit) Line Item Number (ELIN)			
			Code Value Implementation Note: Use to identify the ELIN, or the ELIN including the SUBELIN, as appropriate.			
			C7 Contract Line Item Number			
			Code Value Implementation Note: Use as needed to identify the CLIN or the CLIN including the SUBCLIN, as appropriate.			
Conditional	CS05	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Optional	CS06	324	Purchase Order Number	O	AN	1/22
			Identifying number for Purchase Order assigned by the orderer/purchaser.			
			Implementation Note: Use to identify the Purchase Order (PO) number, if applicable. When used, do not use CS01, CS02, or CS03.			
Not Used	CS07	560	Special Services Code	O	ID	2/10
Not Used	CS08	433	F.O.B. Point Code	O	ID	2/2
Not Used	CS09	954	Percent	O	R	1/10
Not Used	CS10	954	Percent	O	R	1/10
Not Used	CS11	782	Monetary Amount	O	R	1/15
Not Used	CS12	336	Terms Type Code	O	ID	2/2
Not Used	CS13	560	Special Services Code	O	ID	2/10
Not Used	CS14	355	Unit or Basis for Measurement Code	O	ID	2/2
Not Used	CS15	212	Unit Price	O	R	1/17
Not Used	CS16	336	Terms Type Code	O	ID	2/2
Not Used	CS17	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	CS18	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: PWK Paperwork

Level: Detail

Loop: HL

Usage: Optional

Max Use: >1

Purpose: To identify the type and transmission of paperwork or supporting information

Syntax: **P0506** — If either PWK05 or PWK06 is present, then the other is required.

Comments: 1. PWK05 and PWK06 may be used to identify the addressee by a code number.

2. PWK07 may be used to indicate special information to be shown on the specified report.

3. PWK08 may be used to indicate action pertaining to a report.

Implementation Notes:

1. Use multiple occurrences as needed in reports in the Report loop, to identify separately provided enclosures or attachments being supplied to the action point to assist in the investigation.
2. Use in RFI/TDR to identify inspections performed or waived on the discrepant shipment.
3. Use in RFI/TDR reports as needed, to indicate various information responses.
4. Use PWK04-07 as a unit to provide unique identification of the report cited in PWK01.
5. Use in conjunction with PWK01 to identify the number of individual documents being forwarded. For example, 3 - SF361 sets, 1 - Temperature chart, 3 - GBLs, etc. This does not represent the number of copies of an individual document.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PWK01	755	Report Type Code Code indicating the title or contents of a document, report or supporting item	M ID 2/2

Implementation Note:

Unless specifically annotated, codes are applicable to all discrepancy reports.

AE Attachment

Code Value Implementation Note:

Use to identify support documentation to be forwarded to the action party. Use when the type of document is not specified by a particular code in PWK01.

BC Bill of Lading Copy

CN Customer's Report of Nonconformance

Code Value Implementation Note:

Use in RFI/TDR reports to indicate non-receipt of property document indicating supply records were checked to determine if items were received.

DJ Discharge Monitoring Report

Code Value Implementation Note:

Use in RFI/TDR reports to identify tally sheets indicating quantity and condition of discharged cargo.

DW Drawing(s)

F6 Transportation Carrier Inspection Report

F7 Government Inspection Report

F8 Inspection Waiver (Written)

Code Value Implementation Note:

Use in RFI/TDR reports, to indicate a written waiver of inspection was provided by the carrier.

F9 Inspection Waiver (Oral)

Code Value Implementation Note:

Use in RFI/TDR reports to indicate an oral waiver of inspection was provided by the carrier. Use PWK07 to indicate, Name, Title and Date.

IV Invoice

Code Value Implementation Note:

Use to indicate a billing document for actual or estimated costs of repair. Enter the word "Estimate" in PWK07 when indicating a repair estimate.

LA Laboratory Results

Code Value Implementation Note:

Use in SDR/PQDR reports.

MR Material Inspection and Receiving Report

MS Material Safety Data Sheet

OL Ocean Bill of Lading

Code Value Implementation Note:

Use in RFI/TDR reports.

P1 Packing List

Code Value Implementation Note:

Use in SDR/PQDR reports.

PD Proof of Delivery

Code Value Implementation Note:

Use in RFI/TDR reports to indicate a carrier's delivery receipt. Use 2/REF/070 code KK to indicate if the discrepancy was noted on the receipt.

PG Packaging Specification

Code Value Implementation Note:

Use in SDR/PQDR reports.

PJ Purchasing Specification

Code Value Implementation Note:

Use in SDR/PQDR reports.

PV Police Report

Code Value Implementation Note:

Use in TDR reports to identify an applicable accident report.

S1 Supply and Shipment Status Report

Code Value Implementation Note:

Use to identify the DD1348-1, material release order, or other document relating to the release of the material by the shipper.

S9 Representation

Code Value Implementation Note:

Use in reports to indicate witness statements.

XE Equipment Test Results

		Code Value Implementation Note: <i>Use in SDR/PQDR reports.</i>		
		XP Photographs		
Required	PWK02	756	Report Transmission Code	O ID 1/2
		Code defining timing, transmission method or format by which reports are to be sent		
		Implementation Note: <i>Use to identify the means by which the submitter will transmit supporting documentation to the action party.</i>		
		BE By Mail and Electronically		
		BM By Mail		
		CF Courier		
		EL Electronically Only		
		FX By Fax		
Optional	PWK03	757	Report Copies Needed	O NO 1/2
		The number of copies of a report that should be sent to the addressee.		
Optional	PWK04	98	Entity Identifier Code	O ID 2/2
		Code identifying an organizational entity, a physical location, or an individual		
		CA Carrier		
		Code Value Implementation Note: <i>Use only when PWK02 is code CF.</i>		
		P1 Preparer		
		Code Value Implementation Note: <i>Use PWK04-07 as a unit in RFITDR reports to provide unique identification of the report cited in PWK01.</i>		
Conditional	PWK05	66	Identification Code Qualifier	C ID 1/2
		Code designating the system/method of code structure used for Identification Code (67).		
		Implementation Notes: 1. Use to identify the organization that prepared the report. 2. Use to indicate information relating to moving the documentation.		
		1 D-U-N-S Number, Dun & Bradstreet		
		Code Value Implementation Note: <i>Use with PWK02 code CF to indicate the DUNS number of the commercial carrier moving the documentation. Use only if CAGE code is not available.</i>		
		10 Department of Defense Activity Address Code (DODAAC)		
		12 Telephone Number (Phone)		
		Code Value Implementation Note: <i>Use with PWK02 code FX. PWK06 will carry the FAX number the documentation was sent to.</i>		
		2 Standard Carrier Alpha Code (SCAC)		
		20 Standard Point Location Code (SPLC)		
		27 Government Bill Of Lading Office Code (GBLOC)		
		33 Commercial and Government Entity (CAGE)		
		Code Value Implementation Note: <i>Use to identify the organization that prepared the report.</i>		
		A2 Military Assistance Program Address Code (MAPAC)		

M4 Department of Defense Routing Identifier Code (RIC)

Code Value Implementation Note:*Use in reports to indicate the Routing Indicator Code for a DoD activity.*

Conditional	PWK06	67	Identification Code	C	AN	2/20
			Code identifying a party or other code.			
Optional	PWK07	352	Description	O	AN	1/80
			A free-form description to clarify the related data elements and their content.			
			Implementation Notes:			
			1. Use in reports to identify a unique identification number for the attachment. With PWK01 code AE, also briefly describe the document.			
			2. Use with PWK01 code AE, to briefly describe the type of document.			
Not Used	PWK08	C002	ACTIONS INDICATED	O		

Segment: LM Code Source Information
Level: Detail
Loop: LM Repeat: >1
Usage: Optional
Max Use: 1
Purpose: To transmit standard code list identification information
Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Use this 2/LM/104 loop in Item loops in reports, to identify DoD unique coded data identifying FMS customer information when reports SDR or PQDRs are being reported by FMS customers.
2. RFI/TDR - Use this 2/LM/104 loop in Item loops only, to identify DoD unique coded data related to the characteristics and coding requirements for the type of material being reported.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Optional	LM02	822	Source Subqualifier A reference that indicates the table or text maintained by the Source Qualifier.	O	AN	1/15

Segment: LQ Industry Code**Level:** Detail**Loop:** LM**Usage:** Mandatory**Max Use:** >1**Purpose:** Code to transmit standard industry codes**Syntax:** C0102 — If LQ01 is present, then LQ02 is required.**Data Element Summary**

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O	ID	1/3
	39	Transportation Mode or Method Code Code Value Implementation Note: <i>Use in RFI/TDR reports, in the Report loop, to identify transportation mode. Use multiple occurrences to identify multiple transportation modes.</i>			
	40	Type Pack Code Code Value Implementation Note: <i>Use in RFI/TDR reports in Item loops, to indicate the type of pack.</i>			
	71	Service and Agency Code Code Value Implementation Note: <i>Use only in SDR/PQDR in the Report loop, only for FMS to identify the customer country's requisitioning Service code: B, D, P, and T.</i>			
	78	Project Code Code Value Implementation Note: <i>Use in reports to indicate Project Codes.</i>			
	85	Country and Activity Code Code Value Implementation Note: <i>Use in SDR/PQDR in the Report loop, only for FMS and MAP/Grant Aid to identify the customer country or activity.</i>			
	87	Subsistence Type of Pack Code Code Value Implementation Note: <i>Use in RFI/TDR reports in Item loops, to indicate the type of pack for subsistence items.</i>			
	95	Offer and Release Option Code Code Value Implementation Note: <i>Use in SDR/PQDR in Item loops, only for FMS.</i>			
	A4	Case Designator Number Code Value Implementation Note: <i>Use in SDR/PQDR in Item loops, only for FMS to identify the FMS case designator for the requisition.</i>			
	A6	Freight Forwarder Number Code Value Implementation Note: <i>Use in SDR/PQDR, in Report loops, only for FMS to identify the country representative or freight forwarder.</i>			

A7 Record Control Number

Code Value Implementation Note:

Use in SDR/PQDR in the Report loop, only for MAP Grant Aid to identify the program line item number. Do not use for the unique Report Control Number.

FE Shelf Life Code

Code Value Implementation Note:

Use in PQDR reports to indicate the Shelf Life Code for the item being reported.

Required

LQ02

1271

Industry Code

Code indicating a code from a specific industry code list

C AN 1/20

Required

Segment: NCD Nonconformance Description**Level:** Detail**Loop:** NCD **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To describe the nonconformance condition.**Syntax:** R0102 — At least one of NCD01 or NCD02 is required.**Implementation Notes:**

1. Must use this 2/NCD/230 loop in all reports to describe the deficiency/discrepancy. Also use nested 2/NCA/340 loops to provide information or describe actions taken by the submitting organization and to request actions.
2. Use multiple occurrences of this 2/NCD/230 loop to report multiple deficiencies/discrepancies for any given report. Each iteration will describe a single deficiency/discrepancy.
3. Use this 2/NCD/230 loop in the item loop(s) for SDR/PQDR reports/responses. Use in RFI/TDR report/responses, in Pack, Subpack, Shipment Unit, or Item loops as appropriate. However it may be used in only one type of loop per report. The exception to this is for miscellaneous TDR reports associated with the shipment as a whole (e.g., late delivery, astray) which are identified in the Report loop. Miscellaneous reports associated with a specific item (e.g., improper stowage) should be identified in 2/HL/010 Shipment Unit or Item loops as appropriate and associated to that specific item. Must use the same 2/NCD/230 loops in all responses, to subordinate one or more nested 2/NCA/340 loops that describe the results of the investigation/review associated with that specific deficiency/discrepancy.
4. Use this 2/NCD/230 loop in 2/HL/010 UIT/Lot number loops to identify the specific UIT/Lot numbers and other amplifying information. Each 2/NCD/230 iteration identifies a single UIT/Lot number. Repeat NCD02 and NCD03 coding cited in the 2/HL/010 Item loop to directly relate the UIT/Lot number to the reported deficiency/discrepancy.
5. Use this 2/NCD/230 loop as necessary in SDR reports (in Item loops) to identify the material ordered, shipped, billed, received and found to be discrepant. Also use to identify non-receipt of material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	NCD01	936	Measurement Attribute Code	C	ID	2/2
Required	NCD02	888	Nonconformance Determination Code	C	ID	1/1
			Code indicating whether a nonconforming condition was the reason for submitting or the basis upon which a nonconformance report is initiated			

1 Order

Code Value Implementation Note:

Use in SDR reports in Item loops, to identify information related to the original order, request, or requisition.

2 Shipment

Code Value Implementation Note:

Use in RFI/TDR and SDR reports in Item loops, to identify information related to the material actually shipped.

3 Billing

Code Value Implementation Note:

Use in SDR reports in Item loops, to identify information related to the material actually billed.
Use in 2/HL/010 UTI/Lot number loops to identify the UTI/lot numbers billed for.

4 Receipt

Code Value Implementation Note:

Use in reports in Item loops to identify information related to the material actually received. This would also include material on-hand, and inspected

5 Discrepant

Code Value Implementation Note:

Use in all reports as required, in Item and UTI/Lot number loops to identify a discrepancy, and information related to the material actually found to be discrepant.

Y Was a Reason for the Nonconformance Report

Code Value Implementation Note:

Use in TDR in Report loops to identify miscellaneous reports associated with the shipment as a whole. Use in the Item loop only when the miscellaneous discrepancy being reported is at the Item level.

Required

NCD03 350 Assigned Identification **O AN 1/11**
Alphanumeric characters assigned for differentiation within a transaction set.

Implementation Note:

In reports and responses, each deficiency/discrepancy reported for a single non-conformance report number will cite a unique sequence number. The first 2/NCD/230 loop iteration will cite 1. For each new deficiency/discrepancy reported for a single nonconformance report, the number will be increased incrementally by 1. When multiple iterations of the 2/NCD/230 loop are required to identify a single deficiency/discrepancy, each will cite the same sequence number.

Not Used

NCD04 750 Product/Process Characteristic Code **O ID 2/3**

Not Used

NCD05 559 Agency Qualifier Code **O ID 2/2**

Not Used

NCD06 751 Product Description Code **O AN 1/12**

Not Used

NCD07 352 Description **O AN 1/80**

Optional

Segment: NTE Note/Special Instruction

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To transmit information in a free-form format, if necessary, for comment or special instruction

Comment: The NTE segment permits free-form information/data which, under ANSI X12 standard implementations, is not machine processable. The use of the "NTE" segment should therefore be avoided, if at all possible, in an automated environment.

Implementation Note:

Use in RFI and TDR reports to provide additional information.

Data Element Summary

		ADD Additional Information	
		Code Value Implementation Note: <i>Use to indicate additional requests for information. Use only in a second or subsequent RFI but not in a follow-up to a non-response.</i>	
		GSI General Specification Information	
		Code Value Implementation Note: <i>Use to request information regarding original/correct specifications of the material (e.g., unit cost, unit weight, etc.).</i>	
		RPT Report Remarks	
		Code Value Implementation Note: <i>Use as necessary in the appropriate Item loop(s) to provide comments received in response to a RFI.</i>	

Mandatory

NTE02	352	Description A free-form description to clarify the related data elements and their content.	M AN 1/80
-------	-----	---	-----------

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Notes:

1. Use in all reports in Item and UIT/Lot number loops in reports to provide Item and UIT/lot number related information as indicated by the code notes.
2. Use multiple occurrences in SDR reports to provide selected date information related to the discrepant material.
3. Use in PQDR reports to provide the date the logistics assistance representative (LAR) agreed to the initial claim.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
	094	Manufacture			
		Code Value Implementation Note: Use in SDR reports to indicate when the reported material was manufactured.			
	193	Period Start			
		Code Value Implementation Note: Use to indicate the date the deficient/discrepant material entered the most recent storage location specified in the following 2/N101/280 loop with code LG.			
	510	Date Packed			
		Code Value Implementation Note: Use in SDR reports to indicate when the reported material was packed.			
	511	Shelf Life Expiration			
		Code Value Implementation Note: Use in SDR/PQDR reports to indicate when the shelf-life for the reported material expires.			
	512	Warranty Expiration			
		Code Value Implementation Note: Use in SDR/PQDR reports to indicate when the warranty for the reported material expires.			
	622	Checked			
		Code Value Implementation Note: Use in PQDR to indicate when the LAR checked and signed off on the initial failure claim.			
DTM02	373	Date Date (YYMMDD).	C	DT	6/6
DTM03	337	Time	C	TM	4/8

Required

Not Used

Not Used	DTM04	623	Time Code	O	ID	2/2
Optional	DTM05	624	Century The first two characters in the designation of the year (CCYY).	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Use in reports to identify information related to the material being reported.
2. Must use in all reports, in UIT/Lot number loops to identify the UIT number, lot number, and material inspector, as appropriate.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

BT Batch Number

Code Value Implementation Note:

Use in UIT/Lot number loops to identify the manufacturer's batch number or other number identifying the production run. To indicate a continuous range of batch numbers, indicate the start and end of the batch number range separated by a dash. for example 10-20. Use additional occurrences of this segment for multiple batches and those numbers out of sequence

FE Failure mechanism number

Code Value Implementation Note:

Use in PQDR reports in the Item loop to indicate that failure was detected during one of the following. Cite the appropriate code in REF02.

A - Scheduled maintenance

B - Handling

C - Test

D - Normal Operation

E - Storage

F - Inspection

G - Flight

H - Other

J - Calibration

P - Preflight

GE Geographic Number

Code Value Implementation Note:

Use with PQDR to identify the Geographical Area Deployment Code.

LT Lot Number

Code Value Implementation Note:

Use in UIT/Lot number loops to identify the manufacturer's lot number. To indicate a continuous range of lot numbers, indicate the start and end of the lot number range separated by a dash. For example 10-20. Use additional occurrences of this segment for multiple ranges and those out of sequence.

SE Serial Number

Code Value Implementation Note:

Use in UIT/Lot number loops to identify a UIT (serial) number for a deficient item. Use only one occurrence per iteration of the 2/NCD/230 loop within a 2/HL/010 UIT/Lot number loop.

UV Range Number

Code Value Implementation Note:

Use in PQDR reports in the Item loop to indicate the range of time (time failure code) associated with the operating time at failure identified in 2/QTY02/270. Cite the appropriate code in REF02.

A - Aircraft time

I - Time since overhauled

R - Time since repaired

S - Time since software revision

W - Time under warranty.

W5 Inspector Identification Number

Code Value Implementation Note:

Use in SDR/PQDR reports to identify the specific number assigned to the individual who inspected the referenced material.

W7 Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use in SDR reports with 2/RC01/275 code MF to indicate the manufacturer of the non-standard part which is discrepant.

Required

REF02 127 Reference Number **C AN 1/30**
Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.

Conditional

REF03 352 Description **C AN 1/80**
A free-form description to clarify the related data elements and their content.

Implementation Note:

Use with code CU to identify the material nomenclature.

Optional

Segment: QTY Quantity

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To specify quantity information.

Implementation Note:

Use in the applicable loop, to identify quantities/time associated with the deficiency/discrepancy.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
QTY01	673	Quantity Qualifier Code specifying the type of quantity.	M ID 2/2
	20	Unusable Quantity	
		Code Value Implementation Note: Use in RFI/TDR reports in Item loop(s), to indicate the quantity discrepant (pieces) reported for each line entry.	
	38	Original Quantity	
		Code Value Implementation Note: Use in SDR reports in the Item loop, with NCD02 code 1, to identify the quantity actually ordered, requested, or requisitioned.	
	39	Shipped Quantity	
		Code Value Implementation Note: Use in reports in the Item loop to identify the quantity actually shipped.	
	86	Nonconformance Quantity	
		Code Value Implementation Note: Use in all reports in the Item loop, to indicate the number of units (of issue) with discrepancies.	
	87	Quantity Received	
		Code Value Implementation Note: Use in reports in the Item loop, with NCD02 code 4 to identify the quantity actually received.	
	94	Billable Quantity	
		Code Value Implementation Note: Use in SDR reports in the Item loop, with NCD02 code 3 to identify the quantity actually billed.	
	OT	Number of Operating Periods at Failure	
		Code Value Implementation Note: Use in PQDR reports in the Item loop, to indicate the quantity of operating time at failure. Use QTY03 to identify the operating time failure unit of measure. Use 2/REF/260 to identify the associated range of time (time failure code).	

Mandatory

QTY02	380	Quantity Numeric value of quantity.	M R 1/15
-------	-----	--	----------

Implementation Note:

Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20. Use the quantity of 00 to indicate the item did not work during the initial attempt to place it into service (time failure code INI (Initial) is understood).

Required

QTY03

355

Unit or Basis for Measurement Code

O ID

2/2

Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken

Implementation Notes:

1. Use only for SDR/PQDR.

For all QTY codes except OT use the unit of issue conversion table in volume 1, chapter 10.

2. For QTY01 code OT use one of the following codes:

03 Seconds

1N Count

Code Value Implementation Note:

Use to indicate number of starts (time failure code STA).

B7 Cycles

Code Value Implementation Note:

Use to indicate cycles of equipment, e.g., engine start-up and stop, or take-off and landings.

DA Days

DH Miles

FT Foot

HR Hours

MJ Minutes

MO Months

MR Meter

RO Round

Code Value Implementation Note:

Use to indicate rounds fired.

UN Unit

Code Value Implementation Note:

Use to indicate unit of measure is other than those listed here (time failure code OTH).

YR Years

Optional

Segment: AT Financial Accounting

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To transmit financial accounting data

Syntax: C1001 — If AT10 is present, then AT01 is required.

Comment: AT09 identifies unique local activity financial accounting information

Implementation Notes:

1. Use multiple occurrences as needed, in reports and responses, to identify the appropriation to cite for goods, services, and related adjustments. Also use in responses to identify a separate fund code when the ICP or other action point directs the movement of discrepant material including exhibits.
2. Use in reports to identify the fund code for the appropriation for which a request is being placed to be credited for the deficient material.
3. Use in responses to identify the fund code for the appropriation which is being credited.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	AT01	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
			Implementation Note: Use to identify the DLMS Fund Purpose Code. Use any code except CR or DR.	
Optional	AT02	1282	Treasury Symbol Number Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure	O AN 7/21
			Implementation Note: Cite the basic appropriation (departmental index, fiscal year, treasury account number) and limit/subhead.	
Not Used	AT03	1283	Budget Activity Number	O AN 1/16
Not Used	AT04	1284	Object Class Number	O AN 3/12
Required	AT05	1285	Reimbursable Source Number Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure	O AN 1/3
			Implementation Note: Use to identify the DLMS fund code.	
Not Used	AT06	1286	Transaction Reference Number	O AN 4/20
Not Used	AT07	1287	Accountable Station Number	O AN 3/8
Not Used	AT08	1288	Paying Station Number	O AN 8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O AN 1/80
			Implementation Note: Use for the supplemental accounting classification data.	

Not Used

AT10 1270 Code List Qualifier Code

O ID 1/3

Optional

Segment: AMT Monetary Amount

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To indicate the total monetary amount.

Implementation Notes:

1. Use in responses to identify various amounts associated with the shipment and item as indicated by the codes in AMT01.

Also use to indicate the amount to be credited.

2. Use identify costs associated with repair, repackaging, and/or container replacement. Use AMT03 to indicate whether the costs are actual or estimated.

3. All codes in this segment except A6, U5, and TZ are used only at the Item level.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
AMT01	522	Amount Qualifier Code Code to qualify amount	M	ID	1/2

1 Line Item Total

Code Value Implementation Note:

Use in reports to identify the total costs associated with a repair. (Codes 54, EE, RP)

10 Shipment Value in U.S. Dollars

Code Value Implementation Note:

Use in RFT/TDR reports to indicate the total replacement value of all shortages, missing, damaged or destroyed units for this item.

54 Forecast

Code Value Implementation Note:

Use in reports to identify consumable/repair costs associated with a repair.

A6 Disallowed - Actual

Code Value Implementation Note:

Use in TDR reports in the Report loop, to indicate the amount of unearned transportation costs for short shipments or other situations where the carriers full transportation cost is reduced.

CJ Other Deductions

Code Value Implementation Note:

Use in reports to identify consumable/repair costs associated with repackaging of material.

DZ Job-related Expense

Code Value Implementation Note:

Use in reports to indicate labor costs associated with a repair.

EE Other Expense

Code Value Implementation Note:

Use in reports to identify transportation costs associated with a repair.

FE Fee

Code Value Implementation Note:

Use in reports to identify labor costs associated with container replacement.

LP List Price

Code Value Implementation Note:

Use in SDR reports, in the 2/NCD/230 loop with NCD02 code 1 to identify the unit price of the material ordered.

N Net

Code Value Implementation Note:

Use in reports to identify transportation costs associated with repackaging of material.

PB Billed Amount

Code Value Implementation Note:

Use with SDR reports as needed in the 2/NCD/230 loop with NCD02 code 3 to identify material billing information to indicate the price actually billed.

PD Credit

Code Value Implementation Note:

Use in responses, to indicate the amount of credit being authorized by the action point.

RP Repair

Code Value Implementation Note:

Use in reports to identify material costs associated with a repair.

TY Total at Complete

Code Value Implementation Note:

Use in reports to identify the total costs associated with container replacement (Codes FE, U3, U6, ZZ).

TZ Transportation Cost Total

Code Value Implementation Note:

Use in reports in the Report loop, to identify costs associated with travel to adjudicate the discrepancy.

U3 Miscellaneous Expenses

Code Value Implementation Note:

Use in reports to identify transportation costs associated with container replacement.

U5 Cost of Improvements

Code Value Implementation Note:

Use in reports in Report loops, to indicate Hazardous clean up costs associated with the deficiency/discrepancy.

U6 Alterations, Improvements, Repairs

Code Value Implementation Note:

Use in reports to identify material costs associated with container replacement.

UI Total Costs

Code Value Implementation Note:

Use in reports to identify total costs associated with repackaging (Codes A1, CJ, N, Z2).

Z1 Repackaging Labor Cost

Code Value Implementation Note:

Use in reports to identify repackaging labor costs.

Z2 Repackaging Material Cost

Code Value Implementation Note:

Use in reports to identify repacking material costs.

Z3 Unit Cost of Discrepant Material

Mandatory	Code Value Implementation Note: <i>Use in SDR and PQDR reports as needed in the 2/NCD/230 loop with NCD02 code 5 to indicate the unit price of the discrepant/deficient material.</i>			
	ZZ Mutually Defined			
	Code Value Implementation Note: <i>Use in reports to identify costs associated with consumable/repair items for container replacement.</i>			
	AMT02	782	Monetary Amount Monetary amount.	M R 1/15
Optional	Implementation Note: <i>Value must be expressed in whole dollars (with no decimal) or in dollars and cents (with a decimal included). No more than two positions may follow the decimal when used.</i>			
	AMT03	478	Credit/Debit Flag Code Code indicating whether amount is a credit or debit	O ID 1/1
	Implementation Notes: 1. Use with 2/AMT01/273 code PD to indicate if the indicated amount is a debit or a credit. 2. Use with codes associated with item repair, repackaging and/or container replacement costs to indicate whether the costs are estimated or actual.			
	C Credit			
	Code Value Implementation Note: <i>Use to indicate the repair, repackaging, and/or container replacement costs identified are actual costs.</i>			
	D Debit			
	Code Value Implementation Note: <i>Use to indicate the repair, repackaging, and/or container replacement costs are estimated. Also use with code PD to indicate a cancelled credit.</i>			

Optional

Segment: MEA Measurements**Level:** Detail**Loop:** NCD**Usage:** Optional**Max Use:** >1**Purpose:** To specify physical measurements or counts, including dimensions, tolerances, variances, and weights

(See Figures Appendix for example of use of C001.)

Syntax: 1. R03050608 — At least one of MEA03, MEA05, MEA06 or MEA08 is required.

2. C0504 — If MEA05 is present, then MEA04 is required.

3. C0604 — If MEA06 is present, then MEA04 is required.

4. L07030506 — If MEA07 is present, then at least one of MEA03, MEA05 or MEA06 are required.

5. E0803 — Only one of MEA08 or MEA03 may be present.

Semantic: MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.**Comment:** When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed use MEA05 as the negative (-) value and MEA06 as the positive (+) value.**Implementation Note:***Use in RFI/TDR, only in Shipment Unit or Item loops to identify the unit weight of the discrepant pieces.***Data Element Summary**

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
MEA01	737	Measurement Reference ID Code	O	ID	2/2
Code identifying the broad category to which a measurement applies					
WT Weights					

Code Value Implementation Note:*Use to indicate the total weight of the discrepant pieces for each discrepant line entry.*

Optional

MEA02	738	Measurement Qualifier	O	ID	1/3
Code identifying a specific product or process characteristic to which a measurement applies					

G Gross Weight**SQ** Shipped Quantity**Code Value Implementation Note:***Use in RFI/TDR to indicate the total shipment weight.***ZZZ** Mutually Defined

	Code Value Implementation Note: <i>Use to indicate Net Explosive Weight. (Code H8 - Net Explosive Weight was added in version 3050 and will be used, however it is not yet available as a code in the software.)</i>					
Required	MEA03	739	Measurement Value The value of the measurement.	C	R	1/20
Required	MEA04	C001	COMPOSITE UNIT OF MEASURE To identify a composite unit of measure (See Figures Appendix for examples of use.)	C		
	Implementation Note: <i>Use one of the following codes to indicate the unit of measure.</i>					
Mandatory	MEA04 - 1	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken CW Hundred Pounds (CWT) KG Kilogram LB Pound MP Metric Ton OZ Ounce - Av TN Net Ton (2,000 LB).	M	ID	2/2

Not Used	MEA10	1373	Measurement Method or Device	C	ID	2/4

Optional

Segment: RC Root Cause

Level: Detail

Loop: NCD

Usage: Optional

Max Use: >1

Purpose: To specify the specific part responsible for a customer complaint in a request for service of a product and/or to describe the particular failure mechanism in a failing part or assembly

Syntax: 1. P0102 — If either RC01 or RC02 is present, then the other is required.
2. C0406 — If RC04 is present, then RC06 is required.
3. C0504 — If RC05 is present, then RC04 is required.
4. R0607 — At least one of RC06 or RC07 is required.

Semantic: 1. RC02 contains the part number of the assembly or part that is the fundamental cause of the customer complaint.
2. RC03 would contain the name or identify code of the manufacturer that supplied the part.
3. RC04 identifies the source of the codes in RC05 and RC06.
4. RC05 refers to a specific table belonging to the agency specified by RC04.
5. RC06 or RC07 describes the condition of the part or assembly that is the root cause of the problem being reported or repaired.
6. RC08 can be used to describe a root cause condition. It may be used only in conjunction with either RC06 or RC07.
7. RC09 refers to whether a part was repaired or replaced. A "Y" indicates it was repaired. A "N" indicates it was replaced.

Implementation Notes:

1. Must use in reports and responses with 2/NCD/230 loops with NCD02 code 5 to describe the deficiency/discrepancy as identified by the submitting organization.
2. For wrong-item SDRs, cite the item number and nomenclature of the wrong item in the first occurrence.
3. Use multiple occurrences as needed.

Data Element Summary

Conditional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
RC01	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C ID 2/2

Implementation Notes:

1. Use only in SDRs to identify the primary item identification (NSN when known) of the discrepant material when the wrong item or an unacceptable substitute was received. Use with 2/NCD/230 code 5.
2/LIN/020 identifies the item as ordered.

2. Do not use with RFIs, TDRs, or PQDRs - Use 2/LIN/020.

FS National Stock Number

Code Value Implementation Note:

Use to identify the NSN if known.

MG Manufacturer's Part Number

Code Value Implementation Note:

Must use if NSN is not available.

Conditional	RC02	234	Product/Service ID	C	AN	1/40
			Identifying number for a product or service.			

Optional	RC03	93	Name	O	AN	1/35
			Free-form name.			

Implementation Note:

Use in SDR reports and responses to identify the nomenclature of the discrepant item only when RC01 is used.

Conditional	RC04	559	Agency Qualifier Code	C	ID	2/2
			Code identifying the agency assigning the code values.			

DD Department of Defense

Code Value Implementation Note:

Use in RFI/TDR to indicate the code source is the joint regulation, Reporting of Transportation Discrepancies in Shipments (RCS:MTMC-54), Table 2-5 discrepancy code. Identify the code value in RC06.

DF Department of Defense (DoD)

Code Value Implementation Note:

Use in SDR and PQDR reports and responses to indicate the code source is the DLMS manual. Identify the specific code list in RC05.

DL Defense Logistics Agency

Code Value Implementation Note:

Use in PQDR, to indicate the code source is the joint regulation, Product Quality Deficiency Report Program, DLAR 5144.24. Identify the specific code list in RC05.

MS Military Standard

Code Value Implementation Note:

Use in PQDR to indicate the code source is Department of Army, PAM 738-750. Identify the specific code list in RC05.

Optional	RC05	822	Source Subqualifier	O	AN	1/15
			A reference that indicates the table or text maintained by the Source Qualifier.			

Implementation Note:

Use to identify the code list which describes the cause of the deficiency/discrepancy or associated information.

Use the following code(s) with RC04 code DF.

B - Use in SDR to indicate the DLMS discrepancy code (see DE 1270, code HA). Cite HA in RC06 and the code value in RC07.

C - Use in PQDR to indicate the DLMS (standard) defect code (code list under development). Cite the code value in RC06.

Use the following codes) with RC04 code DL

E - Use in PQDR to indicate the Non-standard defect code. Cite the code value in RC06.

F - Use in PQDR to indicate the summary code. Cite ZZ in RC06 and the code value in RC07.

Use the following code(s) with RC04 code MS

J - Use to indicate the initial trouble indication code. Cite the code value in RC06. For code value 099

(Other), use RC08 to describe the conditions present when the first sign of trouble was noticed.

Conditional	RC06	1228	Casual Part Condition Code Code describing the condition of the part or assembly that is the root cause of the problem being reported or repaired	C	AN	1/3
Conditional	RC07	352	Description A free-form description to clarify the related data elements and their content.	C	AN	1/80
Optional	RC08	933	Free-Form Message Text Free-form message text.	O	AN	1/264

Implementation Notes:

1. Use in reports to describe the deficiency/discrepancy. Use when RC06/RC07 codes are insufficient.

2. Use in PQDR to provide narrative information concerning the deficiency/discrepancy. Prefix the text information with one of the following codes.

A - Circumstances prior to difficulty:

B - Description of difficulty:

C - Cause:

D - Initial indication of trouble (Other):

3. If additional narrative space is required, use an additional iteration of the RC segment and enter the letter "C" for continuation in RC07. For continuation of PQDR text, prefix the text in the same manner as the first iteration.

Optional	RC09	1073	Yes/No Condition or Response Code Code indicating a Yes or No condition or response.	O	ID	1/1
----------	------	------	--	---	----	-----

U Unknown

Code Value Implementation Note:

Use to indicate that the person who discovered the deficiency believes this to be the initial failure of a depot level repairable. (Initial Failure Claim)

Y Yes

Code Value Implementation Note:

Use to indicate that the Logistics Assistance Representative (LAR) agrees that this is an initial failure. Record the name of the LAR in 2/PER/330 and the associated date in 2/DTM/250.

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use this 2/N1/280 loop in reports in the loop indicated, to identify various organizations and locations associated with the discrepancy/deficiency. Examples: contract administration offices, bill-to organizations, ship-to organizations, shippers, and material storage locations.

2. The 1/N1/120 loop identifies the organization originating the transaction and other organizations responsible for actions.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	M ID 2/2
	30	Service Supplier	
		Code Value Implementation Note: Use in PQDR reports in the Item loop, when the material is not new, to identify in conjunction with 2/PID05/030 the organization that last repaired or overhauled the material.	
	7L	Preliminary Inspection Location	
		Code Value Implementation Note: Use in PQDR reports in the Item loop, to identify the location from which a petroleum sample was drawn.	
	BT	Bill-to-Party	
		Code Value Implementation Note: Use in the Item loop, in reports, with 2/NCD02/230 code 1, to identify the bill-to organization from the original transaction.	
	C4	Contract Administration Office	
		Code Value Implementation Note: Use in SDR/PQDR reports in the Report loop, with 2/NCD02/230 code 5 to identify the organization designated to administer the contract identified in the 2/CSI075 segment.	
	CA	Carrier	
		Code Value Implementation Note: Use in RFI/TDR, SDR, and PQDR reports in the Report loop, to identify the carrier of the deficient/discrepant shipment. Use in SDR/PQDR only if the carrier is known.	

CI Consignor

Code Value Implementation Note:

Use in RFI/TDR in Report loops, to indicate the activity that directed or arranged for shipment of the material. Use only if different from the shipper identified by code SH. (The consignor is not always the same as the shipping activity.)

L1 Inspection Location

Code Value Implementation Note:

Use in SDR/PQDR reports in the Item loop, with 2/NCD02/230 code 5 to indicate the organization that discovered the deficiency/discrepancy. Use in conjunction with the 2/PER/330 segment code SM, to identify the individual who discovered the deficiency/discrepancy.

LG Location of Goods

Code Value Implementation Note:

Use in reports in the Item loop, with 2/NCD02/230 code 5, to identify the location of the material when different from the organization originating the discrepancy report. Use the 2/PER/330 segment code FB, to identify the individual responsible for holding the material. Use the following N4 segment (N405 and N406) and the 2/REF/320 segment if required to further identify specific warehouse storage location information.

P1 Preparer

Code Value Implementation Note:

Must use in RFI/TDR reports (in Report loops) associated with a CORS to indicate the organization originating/preparing the report. Use in RFI/TDR to identify the DoDAAC in the report number.

SH Shipper

Code Value Implementation Note:

Use in RFI/TDR reports (in Report loops) associated with a CORS, to indicate the original organization making physical shipment of material. This could be a supply depot or a contractor facility.

ST Ship To

Code Value Implementation Note:

Use in reports in 2/NCD02/230 code 10 within the Report loop, to identify the ship-to organization from the original transaction.

TL Testing Laboratory

Code Value Implementation Note:

Use in PQDR reports in the Item loop, to identify the testing laboratory.

UC Ultimate Consignee

Code Value Implementation Note:

Use in RFI/TDR reports in the Report loop, to identify the ultimate consignee when different from the activity identified by code P1 (Preparer). The ultimate consignee is the activity designated in the transportation document to receive the shipment. For example a Field unit.

X2 Party to Perform Packaging

Code Value Implementation Note:

Use in RFI/TDR and SDRs, in the Report loop, to indicate the activity that stuffed the container.

Z7 Mark-for Party

Code Value Implementation Note:

Use with SDR/PQDR responses, in the Item loop, as needed in the 2/NCD/230 discrepant material loop, to identify the mark-for party for the discrepant material which is to be returned to the distribution system. Also use with PQDRs to indicate an address for an exhibit to be sent.

ZB Party to Receive Credit

		Code Value Implementation Note: Use in SDR/PQDR reports in the Item loop, to identify the party to receive credit. Cite the applicable fund code in 2/AT/272 and the amount to be credited as applicable in 2/AMT/273 code PD.		
Conditional	N102 93	Name Free-form name.	C AN	1/35
		Implementation Notes: 1. SDR/PQDR - Use only with N101 code Z7 when the mark-for party is identified in a response by an individual's name. 2. SDR/PQDR - Provide the last name, first name, middle initial and rate/rank/title, as required, when an individual is named as mark-for party. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available. 3. Use in reports and responses for in-the-clear text name of an organization or location only when a coded address is unavailable.		
Conditional	N103 66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67).	C ID	1/2
		Implementation Note: Use only codes 10 and 33 in SDR/PQDR. <ul style="list-style-type: none"> 1 D-U-N-S Number, Dun & Bradstreet 10 Department of Defense Activity Address Code (DODAAC) 2 Standard Carrier Alpha Code (SCAC) 20 Standard Point Location Code (SPLC) 27 Government Bill Of Lading Office Code (GBLOC) 33 Commercial and Government Entity (CAGE) Code Value Implementation Note: Use when the activity is a contractor not assigned a DoDAAC. <ul style="list-style-type: none"> M4 Department of Defense Routing Identifier Code (RIC) Code Value Implementation Note: Use in reports to indicate the Routing Indicator Code for a DoD activity.		
Conditional	N104 67	Identification Code Code identifying a party or other code.	C AN	2/20
Not Used	N105 706	Entity Relationship Code	O ID	2/2
Not Used	N106 98	Entity Identifier Code	O ID	2/2

Optional

Segment: N2 Additional Name Information

Level: Detail

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To specify additional names or those longer than 35 characters in length

Implementation Note:

Use only if N102 is used and is insufficient to identify the organization.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N201	93	Name Free-form name.	M	AN	1/35

Segment: PER Administrative Communications Contact**Level:** Detail**Loop:** N1**Usage:** Optional**Max Use:** >1**Purpose:** To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.

2. P0506 — If either PER05 or PER06 is present, then the other is required.

3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use to identify the individual who discovered the SDR/PQDR deficiency/discrepancy and the individual responsible for holding deficient/discrepant material.
2. Use this segment in RFI/TDR to provide communication contacts associated with the entries cited within the same N1 loop. Use multiple occurrences to identify multiple contacts. When using multiple occurrences to identify different communication numbers for a single contact, repeat the name cited in PER02.
3. Use in PQDR to identify the logistics assistance representative (LAR) who agreed to the initial failure claim.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named.	M ID 2/2
		AL Alternate Contact	
		Code Value Implementation Note: Use in all reports and responses, only in subsequent occurrences, to identify alternate points of contact or alternate communication numbers.	
		CN General Contact	
		Code Value Implementation Note: Use in reports and responses, in conjunction with 2/N1/280 to indicate general points of contacts not specified by other codes.	
		CW Confirmed With	
		Code Value Implementation Note: Use to identify the LAR who agreed with the initial failure claim by the individual who discovered the defect.	
		FB Coordinator	
		Code Value Implementation Note: Use in reports in the Item loop, with 1/N1/280 code LG to identify the individual responsible for holding deficient/discrepant material.	
		QA Quality Assurance Contact	

Optional	<p>Code Value Implementation Note: Use in PQDR reports in the Item loop, to identify the name of the quality assurance representative.</p> <p>SM Submitting Contact</p> <p>Code Value Implementation Note: Use in reports in the Item loop, with 2/N1/280 code L1 to identify the individual who discovered the deficiency/discrepancy material.</p> <p>WI Witness</p> <p>Code Value Implementation Note: Use to identify the individual who discovered the PQDR/SDR deficiency.</p> <p>PER02 93 Name O AN 1/35 Free-form name.</p> <p>Implementation Note: Provide the last name, first name, middle initial, and rate/rank/title, as required, of individual named as point of contact. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.</p>
Conditional	<p>PER03 365 Communication Number Qualifier C ID 2/2 Code identifying the type of communication number.</p> <p>Implementation Notes: 1. Use to identify the preferred method of communication in the first occurrence. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional occurrences of this PER segment to identify more than three numbers. 2. Do not include blank spaces, parenthesis, or dashes between numbers.</p> <p>AU Defense Switched Network</p> <p>Code Value Implementation Note: Use to identify the DSN telephone number.</p> <p>EM Electronic Mail</p> <p>FT Federal Telecommunications System (FTS)</p> <p>Code Value Implementation Note: Use to identify the FTS telephone number.</p> <p>FX Facsimile</p> <p>Code Value Implementation Note: Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.</p> <p>IT International Telephone</p> <p>TE Telephone</p> <p>Code Value Implementation Note: Use to identify the commercial telephone number. Include the area code and number.</p> <p>TL Telex</p> <p>Code Value Implementation Note: Use to indicate a commercial TELEX number.</p> <p>TX TWX</p> <p>Code Value Implementation Note: Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.</p>

Conditional	PER04	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
-------------	-------	-----	---	---	----	------

Conditional	PER05	365	Communication Number Qualifier Code identifying the type of communication number.	C	ID	2/2
-------------	-------	-----	---	---	----	-----

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified point of contact.

2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER03 is code AU, IT, TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional	PER06	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
-------------	-------	-----	---	---	----	------

Conditional	PER07	365	Communication Number Qualifier Code identifying the type of communication number.	X	ID	2/2
-------------	-------	-----	---	---	----	-----

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified point of contact.

2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER05 is AU, IT, or TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city code.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional

PER08	364	Communication Number	X AN	1/80
Complete communications number including country or area code when applicable.				

Optional

PER09	443	Contact Inquiry Reference	O AN	1/20
Additional reference number or description to clarify a contact number.				

Implementation Note:

Use as needed to identify the office symbol code for the preparing official.

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 2/LM/333 loop with SDR reports only to identify DoD unique coded data related to the characteristics and coding requirements for the report of discrepant material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M ID 2/2
Not Used	LM02	822	Source Subqualifier	O AN 1/15

Segment: LQ Industry Code
Level: Detail
Loop: LM
Usage: Mandatory

Required

Segment: NCA Nonconformance Action**Level:** Detail**Loop:** NCA **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To specify the action that is to be taken in response to a nonconformance condition.**Syntax:** 1. R0203 — At least one of NCA02 or NCA03 is required.
2. P0405 — If either NCA04 or NCA05 is present, then the other is required.**Semantic:** NCA03 describes the action that is to be undertaken.**Comment:** NCA04 is used to specify the quantity that is associated with NCA02 or NCA03.**Implementation Notes:**

1. Must use this 2/NCA/340 loop in reports, to describe actions taken by the originating activity regarding the deficient/discrepant material and to request action to be taken by the action/support points. Action points also use this 2/NCA/340 loop in reports to request action by a support point.
2. Must use this 2/NCA/340 loop in responses, to describe the results of the investigation and actions taken by the screening, action, or support points.
This segment may also be used by the action point, screening point or support point, to request further action/information on the part of the originating or action organization.
3. Use the 2/NTE/350 segment when coding is inadequate to provide the required information.
4. Must use at least one occurrence of this 2/NCA/340 loop in reports and responses for each 2/NCD/230 loop occurrence.
5. Use multiple occurrences as required to describe additional actions.

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
NCA01	350	Assigned Identification	O AN 1/11
Alphanumeric characters assigned for differentiation within a transaction set.			

Implementation Note:

Use to designate a sequence number which associates an action to the same sequence number indicated in the 2/NCD/230 NCD03 data element of the report. The sequence number links a specific response to a specific problem/request.

Conditional

NCA02	887	Nonconformance Resultant Response Code	C ID 1/2
Code identifying a response that is the result of a nonconformance situation.			

Implementation Notes:

1. Use in RFI/TDR follow-ups. Use in TDR to indicate response/action. RFI response is carried in 2/NTE/350.
2. Use code UC in SDR/PQDRs to comply with XD12 syntax requirements for use of this segment.

FR Follow-up Report Request

Code Value Implementation Note:

Use in RFI/TDR follow-up reports to indicate that no response to a previously submitted report has been received and a response action is desired to be taken, or that additional information is being provided.

P Prepare Claim

Code Value Implementation Note:

Use in TDR to indicate Part II is submitted to request claim action be initiated.

RQ Request for Disposition

Code Value Implementation Note:

Use in reports with NCA03 when codes are insufficient, to indicate the action desired or taken by the organization reporting the discrepancy.

RS Response Requirements Follow

Code Value Implementation Note:

Use in responses to indicate that this 2/NCA/340 loop defines the actual action taken or directed by the organization processing the report. Use the following 2/NTE/350 segment to provide the information.

UA Use As Is

Code Value Implementation Note:

Use in TDRs to indicate Part II is submitted and claim action is not required.

UC Other Action

Code Value Implementation Note:

Use in RFI/TDR reports to indicate that information related to the shipment status/condition will appear in subsequent segments within the 2/NCA/340 loop.

Use in SDR/PQDR reports and responses to meet the X12 syntax requirements for this segment. SDR/PQDR reports, action requested is carried in 2/RC/275. SDR/PQDR response action is carried in 2/LQ/465.

Conditional	NCA03	352	Description	C AN 1/80
			A free-form description to clarify the related data elements and their content.	
			Implementation Note:	
			Use with RC03 code RQ when codes are insufficient.	
Conditional	NCA04	380	Quantity	C R 1/15
			Numeric value of quantity.	
			Implementation Note:	
			Use in SDR/PQDR reports when required, to indicate the number of days that the exhibit is being or is desired to be held.	
Conditional	NCA05	355	Unit or Basis for Measurement Code	C ID 2/2
			Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	
			DA Days	

Optional

Segment: NTE Note/Special Instruction

Level: Detail

Loop: NCA

Usage: Optional

Max Use: >1

Purpose: To transmit information in a free-form format, if necessary, for comment or special instruction

Comment: The NTE segment permits free-form information/data which, under ANSI X12 standard implementations, is not machine processable. The use of the "NTE" segment should therefore be avoided, if at all possible, in an automated environment.

Implementation Notes:

1. Use in SDR reports and responses only when coding is not adequate to provide information as to the status/disposition of the SDR or discrepant material.
2. Must use in initial and information-only PQDR reports and investigation responses to identify the findings and recommendations of the investigation, action taken, results of depot surveillance, evaluation of current production, and the contractor's position.
3. Use in RFI/TDR responses as necessary, to provide information regarding the status/condition as last observed/known by the respondent, or disposition instructions.
4. Use in response to a TDR Part II report, to provide final action/decision by a finance center, claims office, or other activity.
5. Use Multiple occurrences as needed to describe the action or indicate several actions.

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
NTE01	363	Note Reference Code Code identifying the functional area or purpose for which the note applies.	O ID 3/3
		ACT Action	
		Code Value Implementation Note: Use in response to RFI/TDR reports to indicate specific action taken by the respondent. Use in SDR/PQDR reports to indicate action taken by the organization reporting the deficiency/discrepancy.	
		ADD Additional Information	
		Code Value Implementation Note: RFI/TDR Use only in a second or subsequent response.	
		CER Certification Narrative	
		Code Value Implementation Note: Must use in PQDR responses to identify whether the deficiency exists in current production, in current production of similar items, or in the material in stock.	
		CHG Change	
		Code Value Implementation Note: Use only in a second or subsequent response to modify previously supplied information.	
		DOD Description of Damage	

Code Value Implementation Note:

Use in RFI responses to describe any damage noted by the responding organization.

MFG Manufacturing Instructions

Code Value Implementation Note:

Use in PQDR responses to identify the condition of the exhibit and the contractor's position with respect to repair or replacement.

NCD Nonconformance Specification

Code Value Implementation Note:

Use in SDR/PQDR responses to identify the action activity response or results of investigation.

REC Recommendation

Code Value Implementation Note:

SDR/PQDR - Use in reports to identify the recommendations for resolution of the complaint. Use is required in responses to identify remarks and/or recommendations.

TRS Quality Information

Code Value Implementation Note:

Use in response for action point to ask a support point what specifically should be looked into.

VEC Verification Comments

Code Value Implementation Note:

Use in RFI responses to describe the general condition (other than damage) of the shipment/material as noted by the responding organization.

Mandatory

NTE02

352

Description

M AN 1/80

A free-form description to clarify the related data elements and their content.

Optional

Segment: DTM Date/Time Reference**Level:** Detail**Loop:** NCA**Usage:** Optional**Max Use:** >1**Purpose:** To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Notes:

1. Use in SDR/PQDRs to provide dates associated with processing of the report and response.
Also use in response to provide dates associated with the pick-up of deficient/discrepant material.
2. Use in RFI/TDR responses to identify various dates associated with the material.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M ID 3/3
	007	Effective Code Value Implementation Note: Use in RFI responses and TDR reports to indicate the date applicable to the status/condition of the shipment as observed by the respondent.	
	141	Assigned Code Value Implementation Note: Use in reports, to indicate the date a report is being forwarded or assigned to another activity, e.g., support point.	
	198	Completion Code Value Implementation Note: Use in SDR/PQDR responses only from support points to action points to indicate the date their portion of the investigation is completed.	
	212	Returned to Customer Code Value Implementation Note: Use in RFI/TDR responses when returning a response to the originator.	
	245	Estimated Completion Code Value Implementation Note: Use in SDR/PQDR responses to report follow-ups to provide an estimated date for completing the investigation. Also use to indicate a date additional status or a corrected report will be provided.	
	324	Returned Code Value Implementation Note: Use in responses when action points request further information or for requesting exhibits from the originator.	
	330	Referral Date	

Code Value Implementation Note:

Use with N101 code ZL to indicate the date a mis-routed report is forwarded or assigned to the correct activity. Use with 2/N101/410 code Z6 for material.

802 Date of Action

Code Value Implementation Note:

Use in TDR, in the Report loop when required, to indicate the date of an additional level of review at the reporting activity.

996 Required Delivery

Code Value Implementation Note:

SDR/PQDR - Use to indicate date associated with pick-up or delivery of deficient/discrepant material.

Required	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Optional	DTM05	624	Century The first two characters in the designation of the year (CCYY).	O	N0	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: NCA

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Use in responses to provide shipment information associated with the directed return or disposition of deficient/discrepant material or an exhibit.
2. SDR/PQDR - Use in follow-up reports for additional information - 2/REF03/070 contains code "A" to provide the action/support points the reference numbers associated with material that has been shipped by the submitting organization.
3. Use in RFI/TDR responses to provide additional information relating to the response.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2

Implementation Note:

In SDR or PQDR reports, use only one of codes BL, BM, MK, or WY.

11 Account Number

Code Value Implementation Note:

Use in TDR to indicate the inventory account number identified by the reviewing official for an inventory adjustment.

80 Charge Number

Code Value Implementation Note:

Use in TDR to indicate the charge or transfer number identified by the reviewing official for an inventory or financial adjustment.

BL Government Bill of Lading

Code Value Implementation Note:

Use in SDR/PQDR responses, to identify the GBL shipment number under which material should be returned to the distribution system when so specified by the organization responding to the discrepancy report.

BM Bill of Lading Number

Code Value Implementation Note:

Use in SDR/PQDR responses, to identify the GBL shipment number under which material should be returned to the distribution system when so specified by the organization responding to the discrepancy report.

JC Review

Code Value Implementation Note:

Use in TDR to indicate that material has been expended or received as noted by the reviewing official. Enter E for expended or R for received in REF02.

MK Manifest Key Number

Code Value Implementation Note:

Use in SDR/PQDR responses, to identify the GBL shipment number under which material should be returned to the distribution system when so specified by the organization responding to the discrepancy report.

TN Transaction Reference Number

Code Value Implementation Note:

Use in SDR/PQDR responses, as needed to identify the transaction number under which replacement material will be provided to the organization reporting the discrepancy, or the transaction number provided from an ICP that authorizes the return of discrepant material or exhibit.

UG U.S. Government Transportation Control Number

Code Value Implementation Note:

Use in SDR/PQDR responses, to identify the GBL shipment number under which material should be returned to the distribution system when so specified by the organization responding to the discrepancy report.

WY Waybill Number

Code Value Implementation Note:

Use in SDR/PQDR responses, to identify the GBL shipment number under which material should be returned to the distribution system when so specified by the organization responding to the discrepancy report.

Required	REF02	127	Reference Number	C AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.		
Conditional	REF03	352	Description	C AN	1/80
			A free-form description to clarify the related data elements and their content.		

Optional

Segment: PWK Paperwork

Level: Detail

Loop: PWK **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify the type and transmission of paperwork or supporting information

Syntax: **P0506** — If either PWK05 or PWK06 is present, then the other is required.

Comments: 1. PWK05 and PWK06 may be used to identify the addressee by a code number.

2. PWK07 may be used to indicate special information to be shown on the specified report.

3. PWK08 may be used to indicate action pertaining to a report.

Implementation Notes:

1. Use in responses to identify separately provided enclosures or attachments which provide substantiation or explanation of the results of the investigation or other inquiry

2. Use PWK5-07 as a unit to provide unique identification of the report cited in PWK01.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PWK01	755	Report Type Code Code indicating the title or contents of a document, report or supporting item	M ID 2/2
		AE Attachment	
		Code Value Implementation Note: Use only when none of the other PWK01 codes describes the type of document being forwarded. Use PWK07 to describe the type of document.	
		BC Bill of Lading Copy	
		DW Drawing(s)	
		F6 Transportation Carrier Inspection Report	
		F7 Government Inspection Report	
		IV Invoice	
		LA Laboratory Results	
		MR Material Inspection and Receiving Report	
		MS Material Safety Data Sheet	
		P1 Packing List	
		PD Proof of Delivery	
		Code Value Implementation Note: Use to indicate a document providing evidence of proof of delivery.	
		PG Packaging Specification	
		PJ Purchasing Specification	
		QR Quality Report	

		Code Value Implementation Note:	
		<i>Use in responses (SDR or PQDR) to provide details of the investigation which cannot be included within this transaction set.</i>	
		S1 Supply and Shipment Status Report	
		Code Value Implementation Note:	
		<i>Use to identify the DD1348-1, material release order, or other document relating to the release of the material by the shipper.</i>	
		S8 Report of Findings	
		XE Equipment Test Results	
		XP Photographs	
Optional	PWK02 756	Report Transmission Code	O ID 1/2
		Code defining timing, transmission method or format by which reports are to be sent	
		BE By Mail and Electronically	
		BM By Mail	
		CF Courier	
		EL Electronically Only	
		FX By Fax	
Not Used	PWK03 757	Report Copies Needed	O NO 1/2
Optional	PWK04 98	Entity Identifier Code	O ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CA Carrier	
		Code Value Implementation Note:	
		<i>Use only when PWK02 is code CF.</i>	
		P1 Preparer	
		Code Value Implementation Note:	
		<i>Use with RFI/TDR to indicate preparer of the document.</i>	
Conditional	PWK05 66	Identification Code Qualifier	C ID 1/2
		Code designating the system/method of code structure used for Identification Code (67).	
		1 D-U-N-S Number, Dun & Bradstreet	
		Code Value Implementation Note:	
		<i>Use with PWK02 code CF to indicate the DUNS number of the commercial carrier moving the documentation. Use only if CAGE code is not available.</i>	
		10 Department of Defense Activity Address Code (DODAAC)	
		12 Telephone Number (Phone)	
		Code Value Implementation Note:	
		<i>Use with PWK02 code FX. PWK06 will carry the FAX number the documentation was sent to.</i>	
		33 Commercial and Government Entity (CAGE)	
		Code Value Implementation Note:	
		<i>Use with PWK02 code CF to indicate the CAGE code of the commercial carrier moving the attached documentation.</i>	
		M4 Department of Defense Routing Identifier Code (RIC)	
		Code Value Implementation Note:	
		<i>Use in reports to indicate the Routing Indicator Code for a DoD activity.</i>	

Conditional	PWK06	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Optional	PWK07	352	Description A free-form description to clarify the related data elements and their content. <i>Implementation Note:</i> <i>Use in reports to identify a unique identification number for the attachment. With PWK01 code AE, also briefly describe the document.</i>	O	AN	1/80
Not Used	PWK08	C002	ACTIONS INDICATED	O		

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. SDR/PQDR - Use in reports to identify the action point and specific individual(s) requesting action by a support point.
2. SDR/PQDR - Use in responses to identify the activities and individuals providing the response.
3. Use in responses to indicate the ship-to location for deficient/discrepant material, or for PQDR exhibits.
4. Use in TDR to indicate various organizations to receive the report and to identify responsibility (party at fault) for the discrepancy. Use N106 to identify the type of activity.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		12 Regional Office	
		Code Value Implementation Note:	
		Use in TDRs to indicate a MTMC organization office where report is forwarded for review/action.	
		91 Action Party	
		Code Value Implementation Note:	
		Use in RFI/TDR response to identify the activity and individuals providing the response. Provide the name of the Quality Manager in 2/PER/460 code QM.	
		92 Support Party	
		Code Value Implementation Note:	
		Use in SDR/PQDR response to indicate the organization acting as a support point as assigned by the action point.	
		C4 Contract Administration Office	
		Code Value Implementation Note:	
		Use in TDRs to indicate the contract administration office where a TDR is forwarded for review.	
		CX Claim Administrator	
		Code Value Implementation Note:	
		Use in TDR response to identify the office with claim action.	

			FL Primary Control Point Location Code Value Implementation Note: <i>Use in TDR response to identify the organization with claim or other action.</i>			
			QD Responsible Party Code Value Implementation Note: <i>Use in TDR, in Report loops to indicate responsibility (party at fault) for the discrepancy.</i>			
			ST Ship To Code Value Implementation Note: <i>Use in responses to indicate where exhibit items or deficient/discrepant material is to be shipped.</i>			
			Z6 Transferring Party Code Value Implementation Note: <i>Use in reports and responses to indicate an incorrect action/support point receiving a response. Indicate the date the response is forwarded to the correct organization 1/DTM/040.</i>			
			ZD Party to Receive Reports Code Value Implementation Note: <i>Use in TDR to identify additional party(ies) to receive report. Use only if the organization is not specifically identified by another N101 code value.</i>			
			ZL Party Passing the Transaction Code Value Implementation Note: <i>Use in RFI/TDR reports to indicate an activity that received a mis-directed shipment and redirects it to the correct activity. Use 2/DTM/360 code 330 to indicate the date.</i>			
Conditional	N102	93	Name Free-form name.	C	AN	1/35
			Implementation Note: <i>Use with N106 code B2 to identify the responsible party.</i>			
Conditional	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 1 D-U-N-S Number, Dun & Bradstreet 10 Department of Defense Activity Address Code (DODAAC) 2 Standard Carrier Alpha Code (SCAC) 33 Commercial and Government Entity (CAGE) M4 Department of Defense Routing Identifier Code (RIC)	C	ID	1/2
			Code Value Implementation Note: <i>Use in reports to indicate the Routing Indicator Code for a DoD activity.</i>			
Conditional	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2
			Implementation Note: <i>Use with N101 code QD to identify the transportation function party responsible for the discrepancy.</i>			
			40 Receiver B2 Other Unlisted Type of Organizational Entity			

Code Value Implementation Note:
Use N102 to specify type of activity.

CA Carrier

Code Value Implementation Note:
Use to identify a carrier.

SH Shipper

Code Value Implementation Note:
Use to identify the shipper/contractor.

T4 Transfer Point

Code Value Implementation Note:
Use to identify a trans-shipping activity.

Optional

Segment: PER Administrative Communications Contact

Level: Detail

Loop: N1

Usage: Optional

Max Use: >1

Purpose: To identify a person or office to whom administrative communications should be directed

- Syntax:**
1. P0304 — If either PER03 or PER04 is present, then the other is required.
 2. P0506 — If either PER05 or PER06 is present, then the other is required.
 3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Note:

Use this 2/PER/460 segment to provide communication contacts associated with the 2/N1/410 loop.
 Use multiple occurrences to identify multiple contacts.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named.	M ID 2/2
		AA Authorized Representative	
		Code Value Implementation Note: Use with N101 ZQ to indicate the Approving Official (when other than the reporting activity) for the TDR Part II.	
		AL Alternate Contact	
		Code Value Implementation Note: Use only in subsequent occurrences to identify alternate points of contact or alternate communication numbers.	
		QM Quality Manager	
		Code Value Implementation Note: Use in SDR/PQDR reports in conjunction with 2/N101/410 code 91 when action points request assistance from support points and in responses to indicate the action point manager of deficiency/discrepancy.	
		RE Receiving Contact	
		Code Value Implementation Note: SDR/PQDR - Use in conjunction with 2/N101/410 code ST to indicate a POC at the receiving location. Must use in PQDR exhibit shipments to indicate the Government Quality representative at the receiving location.	
		RZ Respondant	
		Code Value Implementation Note: Use with 1/N101/410 code 91 to indicate the individual preparing the initial RFI response.	
		SI Investigator	

Optional	<p>Code Value Implementation Note: SDR/ PQDR - Use in responses from support points to action points in conjunction with 2/N101/410 code 92 to indicate the individual at the support point responsible for the investigation.</p> <p>PER02 93 Name O AN 1/35 Free-form name.</p>
	<p>Implementation Note: Provide the last name, first name, middle initial, and rate/rank/title, as required, of individual named as point of contact. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.</p>
Conditional	<p>PER03 365 Communication Number Qualifier C ID 2/2 Code identifying the type of communication number.</p>
	<p>Implementation Notes: 1. Use to identify the preferred method of communication in the first occurrence. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional occurrences of this PER segment to identify more than three numbers. 2. Do not include blank spaces, parenthesis, or dashes between numbers.</p> <p>AU Defense Switched Network Code Value Implementation Note: Use to identify the DSN telephone number.</p> <p>EM Electronic Mail FT Federal Telecommunications System (FTS) Code Value Implementation Note: Use to identify the FTS telephone number.</p> <p>FX Facsimile Code Value Implementation Note: Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.</p> <p>IT International Telephone Code Value Implementation Note: Include country and city codes as needed.</p> <p>TE Telephone Code Value Implementation Note: Use to identify the commercial telephone number. Include the area code and number.</p> <p>TL Telex Code Value Implementation Note: Use to indicate a commercial TELEX number.</p> <p>TX TWX Code Value Implementation Note: Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.</p>
Conditional	<p>PER04 364 Communication Number C AN 1/80 Complete communications number including country or area code when applicable.</p>
Conditional	<p>PER05 365 Communication Number Qualifier C ID 2/2 Code identifying the type of communication number.</p>

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified point of contact.
2. Do not include blank spaces or dashes between numbers.
3. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER03 is code AU, IT, TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city codes as needed.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional	PER06	364	Communication Number	C	AN	1/80
			Complete communications number including country or area code when applicable.			
Conditional	PER07	365	Communication Number Qualifier	X	ID	2/2
			Code identifying the type of communication number.			

Implementation Notes:

1. Use to identify the preferred method of communication in the first occurrence. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional occurrences of this PER segment to identify more than three numbers.
2. Do not include blank spaces, parenthesis, or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

EX Telephone Extension

Code Value Implementation Note:

Use only if PER05 is AU, IT, or TE.

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile telephone number. Include an area code to indicate a commercial number. Use a subsequent 365/364 pair without an area code to indicate a DSN number.

IT International Telephone

Code Value Implementation Note:

Include country and city codes as needed.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

TL Telex

Code Value Implementation Note:

Use to indicate a commercial TELEX number.

TX TWX

Code Value Implementation Note:

Use to indicate the Communication Routing Identifier (COMMRID) for communication within the Defense Communication System.

Conditional

PER08	364	Communication Number	X AN	1/80
Complete communications number including country or area code when applicable.				

Optional

PER09	443	Contact Inquiry Reference	O AN	1/20
Additional reference number or description to clarify a contact number.				

Implementation Note:

Use as needed to identify the office symbol code for the preparing official.

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 2/LM/464 loop in SDR/PQDR reports and responses to identify DoD unique coded data related to the discrepant/deficient material.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory	Segment:	LQ Industry Code			
	Level:	Detail			
	Loop:	LM			
	Usage:	Mandatory			
	Max Use:	>1			
	Purpose:	Code to transmit standard industry codes			
	Syntax:	C0102 — If LQ01 is present, then LQ02 is required.			
	Data Element Summary				
Required	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
	LQ01	1270	Code List Qualifier Code	O	ID 1/3
			Code identifying a specific industry code list		
			GA Action Code		
			Code Value Implementation Note:		
			Use to identify the DRS action code (code source under development).		
			HB Discrepancy Advice Code		
			Code Value Implementation Note:		
			Use in SDR by the originating activity to identify the action code indicating the action requested.		
			HD Discrepancy Status or Disposition Code		
Required			Code Value Implementation Note:		
			Use in SDR responses, to indicate a DoD code which will provide one or more of the following:		
			- Identification of the cause of discrepancy and corrective action being taken		
			- Disposition instructions for the discrepant material		
			- Exhibit request/instructions		
			- Status of the investigation if not complete		
	LQ02	1271	Industry Code	C	AN 1/20
			Code indicating a code from a specific industry code list		

Mandatory	Segment: SE Transaction Set Trailer
	Level: Detail
	Loop: _____
	Usage: Mandatory
	Max Use: 1
	Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).
	Comment: SE is the last segment of each transaction set.
	Implementation Note: <i>See control structure discussion in volume 1, chapter 6.</i>

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

APPENDIX 18B

SDR DISTRIBUTION

B APPENDIX 18B - SDR DISTRIBUTION

B.1 GENERAL

To perform distribution of the SDR it is necessary to identify the appropriate primary recipient(s), or responsible (action) activity(ies), and all other interested parties to receive the report.

This appendix addresses which organizations must be identified on the SDR based upon what type of shipment was involved.

For items requiring special handling and/or reporting, such as controlled inventory items, the responsible activity must ensure additional distribution of the report as required.

B.1.1 PACKAGING DISCREPANCIES

DoD Components and GSA have designated activities to act as control points to monitor packaging discrepancies for their respective Service/Agency. SDRs for packaging discrepancies must cite the control activity as a recipient of the transaction set. See paragraph B.2, Packaging Discrepancy Control Points, for specific organizations. Also identify the responsible activity and other interested parties as indicated below.

B.1.2 DISCREPANCY REPORTS AGAINST GRANT AID AND FMS SHIPMENTS

All SDR reports for Grant Aid and FMS shipments must identify the ILCO for initial action. If required, the ILCO will convert hard-copy SDRs for electronic transmission and identify the appropriate owners/managers or the DoD shipping depot for FMS nonreceipt SDRs, GSA, or other organization for further action if warranted. The SDR response will identify the ILCO who will forward it to the SDR initiator in the appropriate format.

Army:

Deputy for Operations
U.S. Army Security Assistance Command
ATTN: AMSAC-OL-E
3rd Street and M Avenue, Bldg. 54
New Cumberland Army Depot
New Cumberland, PA 17070-5096

Navy:

Navy International Logistics Control Office (NAVILCO)
ATTN: Code 252
700 Robbins Avenue, Bldg. 4B
Philadelphia, PA 19111-5095

Air Force:

Commander, Air Force Materiel Command
ATTN: AFSAC/ROD
5490 Pearson Road
Wright-Patterson AFB, OH 45433-5332

B.1.3 DOD ORIGINATED SHIPMENTS

- **Interservice/intraservice:**

Responsible activity: Shippers ICP/IM. For personal property shipments identify the shipping activity's transportation officer.

- **Material Returns:**

Responsible activity: ICP.

Copy to: Shipping activity.

- **Shipments to Reutilization and Marketing Shipments:**

Responsible activity: Shipping activity.

Copy to: Shipper's ICP/IM.

Copy to: DRMS.

- **Shipments from Reutilization and Marketing Shipments:**

Responsible activity: Shipping DRMO.

Copy to: DMRS.

B.1.4 DOD CENTRAL PROCUREMENT (DIRECT VENDOR DELIVERY)

For material procured centrally by a DoD Component ICP or by a DSC, distribution will be as follows irrespective of the point of inspection and acceptance.

Responsible activity: Procuring contracting officer. For DLA see addresses in para. B2.5.

Copy to: Office administering the contract/purchase order, if different from the purchasing office, except as otherwise prescribed in B.1.7 below.

Copy to: Other interested parties as identified by the DoD Component.

B.1.5 GSA ORIGINATED OR DIRECTED SHIPMENTS

Responsible activity: GSA National Customer Service Center.

Copy to: Shipping activity if a DoD depot.

Copy to: ICP/IM of material for disposition of erroneous material if DoD is ICP/IM.

Copy to: Other interested parties as identified by the DoD Component.

B.1.6 DEPRA DIRECTED SHIPMENTS

Responsible activity: Shipping activity.

Copy to: DAASC.

Copy to: Other interested parties as identified by the DoD Component.

B.1.7 PURCHASES MADE BY DOD ACTIVITIES FROM FEDERAL SUPPLY SCHEDULES OR GSA OPEN-END CONTRACTS

Distribution will be the same as for DoD central procurement identified above, Include the GSA National Customer Service Center to receive a copy under the following conditions only:

Repetitive discrepancies.

Cases of dispute which cannot be resolved between the ordering office and the supplier.

Product quality deficient material in Grant Aid shipments where GSA has provided inspection at source.

B.1.8 LOCAL PURCHASE

Distribution will be the same as for DoD central procurement, A copy will be furnished the Government Inspector when inspection is at origin.

B.1.9 INDUSTRIAL PLANT EQUIPMENT SHIPMENTS

Responsible activity: Defense Supply Center Virginia will review all SDRs from the initiator, make further distribution as necessary, request appropriate action from the consignor, and provide the initiator with replies from the consignor and other closeout action.

B.2 PACKAGING DISCREPANCY CONTROL POINTS

B.2.1 ARMY

For shipments of material, other than ammunition and explosives, originating at U.S. Army Material Command depots, arsenals, plants, laboratories, proving grounds and contractors; U.S. Army Forces Command activities; U.S. Army Training and Doctrine Command activities, and at Army overseas activities:

DoD 4000.25-M, Vol 2
Version 2.0

Chief
LOGSA, Packaging, Storage and Containerization Center
ATTN: AMXLS
11 Hap Arnold Blvd.
Tobyhanna, PA 18466-5097

For shipments of ammunition/explosives and related material originating at AMC depots, arsenals, plants, laboratories, proving grounds and contractors:

Commander
Industrial Operations Command
ATTN: AMSMC-DC
Rock Island, IL 61299-6000

U.S. Army ICP packaging office address are as follows:

Commander
U.S. Army Aviation and Troop Command (RIC A12 and B17)
ATTN: AMSAT-I-SDP
4300 Goodfellow Boulevard
St. Louis, MO 63210-1798

Phone: DSN 693-263-2372
Phone commercial : (314) 263-2379

Commander
U.S. Army Communications-Electronics Command (RIC B16)
ATTN: AMSEL-LC-MMD-P
Fort Monmouth, NJ 07703-5000

Phone: DSN 992-2616
Phone commercial: (908) 532-2616

Commander
U.S. Army Missile Command (RIC B64)
ATTN: AMSMI-MMC-LS-MDP
Redstone Arsenal, AL 35898-5239

Phone: DSN 788-2523
Phone commercial: ((205) 842-2523

Commander
U.S. Army Tank -Automotive and Armaments Command (RIC B14)
ATTN: AMSTA-AR-ESK
Rock Island, IL 61299-7300

Phone: DSN 793-6164
Phone commercial: (309) 782-6164

Commander
U.S. Army Tank -Automotive and Armaments Command (RIC AKZ)
ATTN: AMSTA-GTP
Warren, MI 48397-5000

Phone commercial: (313) 574-8712

B.2.2 NAVY

For all material and supplies, other than ammunition and explosives, the organization directing release of the material:

Commander
Naval Air Systems Command
ATTN: AIR 412
1421 Jefferson-Davis Highway
Arlington, VA 22243-5120

Commander
Naval Facilities Engineering Command
ATTN: FAC 0644
Alexandria, VA 22332-2300

Commander
Naval Sea Systems Command
ATTN: SEA 05M31
Washington, DC 20362-5101

Commander
Space and Naval Warfare Systems Command
ATTN: Code 003-211B
Washington, DC 20363-5100

Commanding Officer
Naval Aviation Supply Office
ATTN: Code 0512
700 Robbins Avenue
Philadelphia, PA 19111-5098

Commanding Officer
Navy Ships Parts Control Center
5450 Carlisle Pike
P.O. Box 2020
ATTN: Code 0541
Mechanicsburg, PA 17055-0788

For shipments of arms, ammunition, or explosives:

Commander
Naval Sea Systems Command
ATTN: SEA 6511
Washington, DC 20362-5101

B.2.3 MARINE CORPS

For all materials and supplies, to include arms, ammunition and explosives, originating from Marine Corps activities:

Commander (Code 808-1)
Marine Corps Logistics Bases
814 Radford Boulevard
Albany, GA 31704-1128

Phone: DSN 567-5291/5292/5481
Phone commercial: (912) 439-5291/5292/5481
FAX: DSN 567-5631
Message Address: COMMARCORLOGBASES Albany GA//808-1//

B.2.4 AIR FORCE

Air Force points of contact, including arms, ammunition, and explosives, will be the applicable item management areas as contained in AFM 67-1, vol 1, part 2, or Air Force Materiel Command Maintenance Engineering Management Assignment (T>O>00-25115); or as identified in Standardization Directory SD-1 (FSC Class Area Assignment).

The following POCs apply to packaging discrepancies applicable to Air Force management items that are stored at and are issued from DLA depots located at Hill, Tinker, McClellan, Kelly, and Robins AFBs.

Packaging SDRs will be reported to the following DLA activities:

Information copies of packaging SDRs will be provided to the following Air Force activities.

DDOU-XID
Building 845
7537 Wardleigh Road
Hill AFB, UT 84056-5734

75ABW/LGTP
7530 11th Street
Hill AFB, UT 84056-5707

DDOO-XI
7401 2nd Street, Suite 108
Tinker AFB, OK 73145-9013

72 ABW/LGTP
7516 Sentry Blvd, Suite 202B
Tinker AFB, OK 73145-8912

DDMC-XA
2031 Idzorek Street
McClellan AFB, CA 95652-1621

77 ABW/LGTP
4443 Dudley Blvd
McClellan AFB, CA 95652-1418

DDST-XP
Building 1534
280 Dover Street
Kelly AFB, TX 78241-54444

76 LG/LGTP
401 Wilson Blvd
Bldg. 1572, Door 1B
Kelly AFB, TX 78241-5340

DDWG/VA
450 5th Street
Robins AFB, GA 31098-1887

78 ABW/LGTP
455 Byron Street, Bldg. 376
Robins AFB, GA 31098-1860

For research, development, test, and evaluation (RDT&E) material for which inventory management has not been established (AFM 67-1):

Commander
Air Force Materiel Command
ATTN: LGT
4375 Chidlaw Road, Suite 6
Wright-Paterson AFB, OH 45433-5006

For the purposes of this chapter, RDT&E material are those items acquired under Air Force contracts whose contract number on the shipping container is prefixed with F04611, F04690, F04701, F04703, F04704, F08606, F08635, F19630, F33615, F33657, or F40600.

B.2.5

DEFENSE LOGISTICS AGENCY

DLA will accept SDRs by mail, telephone, electronic mail, facsimile, and message, as shown below. This information is applicable to shipments originating at DLA depots and shipments from DLA contractors (contractor shipped).

B.2.6 ARMY - CONTESTED AND UNRESOLVED SDR

The final arbitrator for (general supplies) SDRs appealed by the requisitioner:

Chief
LOGSA, PSCC
ATTN: AMXLS-T
11 Hap Arnold Blvd
Tobyhanna, PA 18466-5097

B.2.7 ARMY - SDR CONTROL POINT

For shipments of supplies, other than ammunition and explosives:

Director
U.S. Army Armament and Chemical Acquisition Activity
ATTN: AMSTA-AC-MMD-I
Rock Island, IL 61299-7630

B.2.8 ARMY-AIR FORCE EXCHANGE SERVICE

Chief Army and Air Force Exchange Service
ATTN: CSXTX
Dallas, TX 75222-0202

B.2.7 MILITARY TRAFFIC MANAGEMENT COMMAND

For personal property shipments:

Military Traffic Management Command
ATTN: Director of Personal Property
Washington, DC 22041-5050

B.2.9 GENERAL SERVICES ADMINISTRATION

Send all discrepancy reports (including product quality deficiencies for Grant Aid) for shipments originating from GSA supply distribution facilities or directed by GSA from a contractor/vendor or from a DoD storage activity stocking GSA-owned assets to the following address:

GSA, Federal Supply Service
National Customer Service Center
ATTN: 6FR
1500 East Bannister Road
Kansas City, MO 64131-3088

SDRs may be reported by toll-free telephone to the NCSC at 1-800-488-3111 or by e-mail for those who have access to INTERNET. The NCSC directory address is RODSM.NCSC@GSA.GOV. SDRs may also be faxed. The NCSC facsimile number is 816-926-6952.

DoD 4000.25-M, Vol 2
Version 2.0

For authorized message traffic, use the following address with Communications Routing Indicator RUEOPUI for unclassified messages or RULSSAI for classified messages. The Plain Label Address is GSA, FSS, National Customer Service Center, Kansas City MO.

APPENDIX 18C

**INSTRUCTIONS FOR PREPARATION OF
STANDARD FORM 364**

C APPENDIX 18C - INSTRUCTIONS FOR PREPARATION OF STANDARD FORM 364

C.1 ORIGINAL REPORT

Supply discrepancy reports (SDRs) and the associated response will be reported on the SF 364, Report of Discrepancy (ROD), National Stock Number 7540-00-159-4442, or by other means authorized herein. Military Services will secure the necessary supply of forms through normal channels. DLA field activities will obtain their supply of the SF 364 by ordering the item from GSA.

Indicate whether shipping discrepancy or packaging discrepancy by placing an "X" in appropriate box(es) at top of form.

- Item 1 **Date of Preparation.** Report is prepared in sequence of year, month, and day. This sequence should also be used in all date entries. For example, March 23, 1995, is written 95 MAR 23.
- Item 2 **Report Number.** The country and record control number must be shown for Grant Aid as a part of the report number. For FMS, this is the control number of the report consisting of one alpha character to identify the initiating office in-country, four numeric characters for number control, two alpha characters for the purchaser country and three alpha characters for the designator, i.e., A0010-JA-KBD. For any unnumbered reports received, the ILCO will assign number x9000 to x9999 and so advise the FMS purchaser on the receipted copy. Suffix code R added to the report number indicates the purchaser has asked for reconsideration of the report disposition. Suffix code C added to the report number indicates that the purchaser has contested the U.S. Government's decision on a request for reconsideration.
- Item 3 **To.** In-the-clear name, address, ZIP code and DoD activity address code (DoDAAC)/routing identifier code (if assigned), and attention symbol/code of action activity. The action activity is based upon the origin of the shipment as indicated in chapter 18, appendix b. If forwarding to the ICP, the RIC is located in positions 67-69 of the DD 1348-1A. If forwarding to the Defense Distribution Depot, the RIC of the shipping depot is located in positions 4-6. of the DD 1348-1A. When both shipping and packaging discrepancies are reported for the same item, enter "see item 15" and enter addresses and/or codes of both activities in item 15.
- Item 4 **From.** DoDAAC/RIC (if assigned), name, address and ZIP code of the reporting activity (consignee). The in-the-clear address will be entered. Refer to appendix 18b for ILCO in-the-clear addresses.
- Item 5a **Shipper's Name.** Enter name, DoDAAC or RIC (for DoD Activities) or commercial and Government Entity (CAGE) Code (if available, for commercial contractor facilities), and address of shipper (consignor) when different from item 3. If applicable, the RIC of the shipping depot is located in positions 4-6 of the DD 1348-1A.
- Item 5b **Number and Date of Invoice.** Enter number and date of vendor's invoice or shipper's bill number. Attach copy of invoice to SF 364. (Not applicable to packaging discrepancies.)

- Item 6 **Transportation Document.** Enter the type of transportation document, GBL, CBL, manifest, waybill, insured/certified U.S. Postal Service, or transportation control and movement document (TCMD) and the identifying number assigned to such document. This is a mandatory entry when shipment received was made via traceable means, e.g., GBL, CBL. Further, for shipping discrepancies involving shortages, include following statement in item 12--"Shortage has been verified as not being transportation related." (For Grant Aid include a copy of the CBL/GBL if available.)
- Item 7a **Shipper's Number.** Enter shipment number (when more than one shipment is made under a contract or requisition) and contract/contract line item number/document number (e.g., contract, purchase order).
- Item 7b **Office Administering Contract.** Name, address, and ZIP code of the Contract Administration Office (CAO) activity which directed/arranged shipment.
- Item 8 **Requisitioner's Number.** Enter the requisitioning activity's number, e.g., requisition, purchase request. Entry of the applicable requisition document number is mandatory in all instances, even though a contract/purchase order is involved. When the original requisition number cannot be identified for discrepancies in sealed vendor packs, the reporting activity must include a constructed document number. When using a constructed document number in an SDR, include the fund code and credit-to/bill-to DoDAAC in block 13.
- Item 9a **NSN/Part Number and Nomenclature.** If item received is different from item shown on shipping documents, or different from item ordered, show each item on a separate line. For serial numbered principal items, sets, kits and outfits, list the item individual serial number first, followed by the discrepancies applicable to that serial number. (Note: Sets, kits and outfits showing an assembly order number, the assembly order number should also be listed.)
- Item 9b **Unit of Issue.** Enter unit of issue as billed or indicated on shipping document for each item listed in item 9a. (Not applicable to packaging discrepancies.)
- Item 9c **Quantity Shipped/Billed.** Enter quantity of item shipped or billed. When code C1 is applicable, enter the quantity and the supply condition code of the item when shipped, e.g., 980A as shown on shipping document. (Not applicable to packaging discrepancies.)
- Item 9d **Quantity Received.** Enter the quantity of item received.
- Item 10a **Discrepancy Quantity.** Enter the discrepant quantity. If code C1 is applicable, enter the quantity and the supply condition code of the item received. If total quantity received is classified under more than one condition code, enter separately each partial quantity so classified, followed by the applicable condition code, e.g., 960A, 20F. NOTE: Where product quality deficiencies in Grant Aid shipments are involved or when expired shelf-life material is received, and code Q or C. is applicable, enter the following information under item 12, remarks:

1. Manufacturer's name and Commercial and Government Entity (CAGE) Code (if available).
2. Contract/purchase order number if not shown in item 7a.
3. Date manufactured, date cured, date assembled, date packed (apply one as appropriate), date overhauled/repaired, and expiration date for Type I (nonextendible) shelf-life items and inspection or test date for Type II (extendible) shelf-life items.
4. Lot/batch number.
5. Location of material.
6. Name, address, and telephone number of contract.
7. Nature of complaint stating in detail why material is unsatisfactory.

Item 10b **Discrepancy Unit Price.** Enter the unit price as billed or shown on shipping document. (Not applicable to packaging discrepancies.)

Item 10c **Discrepancy Total Cost.** For shipping discrepancies, enter the total value of material (10a x 10b). For packaging deficiencies, enter the total cost for corrective packaging of all discrepant items.

Item 10d **Discrepancy Code.** Nature of the discrepancy using the discrepancy codes listed in volume 1, chapter 10, appendix 10H or on the face of the form. If a condition exists that is not listed, use code Z1 and describe discrepancy in item 12, remarks.

Item 11 **Action Code.** Enter requested action/action taken by SDR initiator from codes listed in volume 1, chapter 10, appendix 10H on the face of the form. If action is other than that covered by listed actions codes, use code 1Z and explain action requested in item 12, remarks. Action code 1D or 1F will not be used on reports prepared to cover DoD DBOF funded shipments and shipments from GSA; material still required must be re-requisitioned. EXCEPTION NOTE: DLA replacement shipments may be requested by the customer. Action code 1E applies only to local purchase items.

Item 12 **Remarks**

General conditions. Use for any supplemental information when the combination of discrepancy codes and action codes needs clarification; when discrepancies need explanation; and when a breakdown of cost to report, in terms of labor man-hours and materials, is required. Specific data such as appearance, lot/batch number manufacture/packaging date, inspector number and inspection date, probable cause of improper packaging, and suggested corrective action should be entered here. Provide photos where it would assist the shipping activity in determining the cause of the discrepancy/deficiency.

Information contact. Include name and communication numbers, e.g., DSN and commercial telephone numbers, facsimile number, and e-mail address of the person to be contacted for additional information if different from that entered in item 14a.

For Defense Distribution Depots that mail hard copies. Indicate the type of receipt involved, e.g., a receipt from procurement, a customer return, or a receipt for the retail supply account, etc.

Discrepancies in seal vendor packs. Enter, if available, the contract number and lot number from the item package and the words "concealed discrepancy found upon opening sealed vendor pack" or cite the appropriate discrepancy code value from volume 1, chapter 10, appendix 10H.

Special conditions. For MAP/Grant Aid--cite the specific violation of specification, regulation, packaging instruction or contract. For shortages or nonreceipt of GSA items shipped via U.S. Postal Service--cite the information requested on the special instruction sheet which is included with shipments of such material. For classified material--cite whether indications of container tampering were or were not evident; indicate whether a security deviation inquiry may be necessary at the origin.

Item 14 **Funding and Accounting Data.** For packaging discrepancies, enter the accounting/appropriation fund must be entered in this block by the SDR initiator if reimbursement funds/credits are expected for costs incurred to correct reported discrepancies. Use only when SF 1080, Voucher for Transfer Between Appropriation and/or Funds is not used.

For shipping discrepancies, use to identify the fund code to be credited when this information is not otherwise available or differs from the original shipment. When using a constructed document number, include the fund code and the bill-to/credit-to DoDAAC.

Item 14a **Typed or Printed Name, Title and Phone Number of Preparing Official.** Self-explanatory. Include both full commercial and DSN telephone numbers.

Item 14b **Signature.** Self-explanatory.

Item 15 **Distribution Addressees for Copies.** Enter other addressees receiving copies of the report. Not applicable to FMS discrepancy reports.

C.2 SDR REPLY

The reverse of SF 364 is to be completed by the action activity as required by this regulation.

Item 16 **From.** The name, DoDAAC/RIC (if assigned) and address of the activity preparing the reply.

Item 17 **Distribution Addressees for Copies.** Enter addressees (including DoDAAC or RIC (if assigned)) receiving copies of the reply in addition to addressee listed in item 18. Not applicable to FMS discrepancy reports.

Item 18 **To.** Enter address (including DoDAAC (if assigned)) of the activity indicated in item 4 on face of the form.

Item 19 Enter advice of action taken by responsible action office by placing an "X" in appropriate box(es). Do **NOT** check box 19f (2) for U.S. SDRs; the regulation(s) citation(s) applies only for shipments to Foreign Military Sales customers. Also, see instructions for item 23.

- Item 20 Enter disposition instructions by placing an "X" in appropriate box(es). Also, see instructions for item 23.
- Item 21 Enter an "X" to indicate to the reporting activity that a new requisition is required if the materiel is still needed. Also, see instructions for item 23.
- Item 22 Enter an "X" to indicate a replacement shipment will be made and the approximate date of the shipment. Also, see instructions for item 23.
- Item 23 **Remarks.** Enter any clarification or information necessary for a complete reply. Enter corrective action taken to preclude future packaging discrepancies and/or record the SDR disposition/status code in volume 1, chapter 10, appendix 10H. This code may be used rather than marking equivalent boxes from items 19, 20, and 21 .
- Item 24a **Typed or Printed Name and Phone Number of Preparing Official.** Self-explanatory. Include both DSN and commercial (including area code) telephone numbers.
- Item 24b **Signature.** Self-explanatory.
- Item 24c **Date.** Self-explanatory.

C.3 SDR FOLLOWUPS, CORRECTIONS, AND CANCELLATIONS

At the top of the original report annotate the appropriate word ("FOLLOWUP," "CORRECTION," OR "CANCELLATION") and the date prepared preceded by asterisk and forward to the same distribution list as the initial report.

Where there is any change to the point of contact information provided in block 14a of the original SF 364, enter the new point of contact name and telephone number(s), preceded by an asterisk.

For corrected or canceled SDRs, the initiator will explain the clarifying data in detail in the "Remarks" block, preceded by an asterisk. Include the signature, date, and DSN and complete commercial telephone number of the person preparing the revised report.

Albany, GA 31704-5000

19 SMALL ARMS SERIAL NUMBER REGISTRATION AND REPORTING

19.1 SCOPE

The provisions of this chapter apply to the Military Departments and Defense Agencies (hereafter referred to as DoD Components) responsible for inventory management of small arms.

19.2 GENERAL REQUIREMENTS

This chapter provides procedures for reporting small arms serial number data between DoD Components and the DoD Registry. Small arms, as defined in Definitions and Terms (Volume 1), including those mounted on aircraft, vehicles, and vessels, that are accounted for in unclassified property records, will be reported (included will be foreign and commercial weapons, museum pieces with serial numbers, and captured enemy/hostile force small arms).

In addition to the requisitioning requirements contained in this volume, the shipping activity will provide a listing of the weapon serial numbers contained in each shipment with the shipment documentation accompanying small arms shipments between DoD Components. When shipments consist of multiple containers, the listing will identify which serial numbers are within each of the containers.

19.2.1 REGISTERING SMALL ARMS

19.2.1.1 SMALL ARMS WITHOUT AN NSN AND/OR SERIAL NUMBER

Small arms without an NSN and/or small arms (except museum pieces) with missing, obliterated, mutilated, or illegible serial numbers, when determined, will be reported to the DoD Registry by the Component Registry, for review and assignment of an MCN/NSN and/or serial number. Assignment of LCN or MCN will not replace or be used in lieu of procedures to request assignment of an NSN where applicable. The Component Registry will report all small arms without an NSN and/or small arms serial number, by message or letter, for assignment of serial number and/or NSN in the following format:

<u>NSN</u>	<u>Serial Number</u>	<u>Description</u>
(NSN or none)	(SN or none)	(Make, model, caliber, and other nomenclature data)

19.2.1.2 FOREIGN WEAPONS

When foreign weapons serial numbers contain unidentifiable characters (non-English alpha characters/non-Arabic numerals) that can be translated into an alpha/numeric equivalent, the translated serial number shall be permanently inscribed on the weapon and reported to the Component and DoD Registries. When the foreign weapon serial number cannot be translated into alpha/numeric equivalents, the Component shall assign a serial number, permanently inscribe the serial number on the weapon, and report the weapon to the Component and DoD Registries.

19.2.2 LOCAL CONTROL NUMBERS/MANAGEMENT CONTROL NUMBERS

LCNs/MCNs will be used by the DoD Components for weapon identification until a valid NSN

can be obtained from the DoD Registry in accordance with subsection 19.2.1 or notification that the MCN/LCN will not be assigned an NSN.

19.2.3 PRIVATELY OWNED SMALL ARMS

Lost, abandoned, or unclaimed privately-owned small arms that are processed through a Board of Officers for actions described in DoD 4160.21-M, chapter VI, and subsequently, turned in to a DRMO, will be registered immediately when they come under Government control.

19.2.4 NONAPPROPRIATED FUNDED SMALL ARMS

Nonappropriated funded small arms turned in to a DRMO and privately-owned weapons classified as claims property will be registered immediately when they come under the control of DoD. Small arms that are claimed (private property whose title has passed to DoD as a result of a claim against the Government due to its damage in connection with Government activities, usually movement of household goods) and confiscated (private property whose title has passed to DoD as a result of being confiscated by appropriate authority, usually as a result of being abandoned and/or unauthorized for personal possession) by DoD activities will be reported immediately to Component Registries.

19.2.5 CEREMONIAL/TRAINING WEAPONS

The DoD Components will take action to obtain a new NSN (or currently assigned NSN) from the DoD Registry for modified weapons rendered inoperable that are used for ceremonial or training purposes. These weapons will be retained on the Component Registries as weapons subject to the reporting criteria.

19.2.6 MISSING, LOST, STOLEN, AND/OR RECOVERED SMALL ARMS

The DoD Components shall establish procedures to assure reporting of lost, stolen, unaccounted for, and/or recovered small arms under the provisions of DoD 5100.76-M.

19.2.7 MOBILIZATION

In the event of mobilization or other emergency, the DoD Registry and the Component Registries will continue to operate and be maintained. TS 140 IC - Small Arms Reporting with Small Arms Transaction Code J (Emergency Suspense Status), will be used in emergency situations as authorized by the individual Services.

19.3 OBJECTIVES

Establish continuous visibility over all small arms by serial number from the contractor to depot; in storage; in transit to requisitioners; in post, camp, and station custody; in the hands of users; during turn-ins; in renovation; and during disposal/demilitarization.

Interface the small arms serial number reporting between the DoD Components using standard procedures.

Provide followup procedures for delinquent shipment/receipt transactions.

Provide reconciliation procedures.

Provide law enforcement agencies, within 72 hours, the identification of the last known accountable activity having a specific serial numbered small arm.

19.4 EXCLUSIONS

Small arms purchased with nonappropriated funds and privately-owned weapons are exempt from being reported to the DoD Registry since these weapons are controlled by civil authorities under the Gun Control Act of 1968. (This does not include weapons turned in for disposal. See subsections 19.2.3 and 19.2.4.)

Classified activities, which determine that specific small arms should not be registered under these procedures, shall request guidance through appropriate channels from the DoD Component.

Deviations from these requirements by DoD activities with small static inventories require concurrence of the JSACG and approval of the DoD Small Arms Program Administrator. Requests for deviations, to include appropriate justification, will be submitted to the Defense Logistics Management Standards Office, ATTN: Small Arms Program Administrator, Suite 230, 6301 Little River Turnpike, Alexandria, VA 22312-3503.

19.5 DELINEATION OF RESPONSIBILITIES

19.5.1 DOD REGISTRY

DoD Registry will:

- Be operated and maintained by the Department of the Army.
- Provide a central repository of small arms serial numbers from the Component Registries, to include those which are on hand, in transit, lost, stolen, demilitarized, or shipped outside the control of DoD.
- Provide law enforcement agencies, within 72 hours, the identification of the last known accountable activity (to include telephone number) having a specific serial numbered small arm (see subsection 19.7.6). Other inquiries, depending on volume and existing workload, will be responded to as expeditiously as possible
- Enter all inquiries from law enforcement agencies and inquiries from appropriate Military and civilian activities for weapons located in foreign countries on the DoD Registry file when no record exists on the active or inactive file. This will be accomplished by using TS 140 IC - Small Arms Reporting with Small Arms Transaction Code 1 (Interrogation/Inquiry Record) and entering the message/inquiry form number in the document number field for cross-reference purposes. For weapons identified as belonging to a DoD Component, these entries will remain in the DoD active master file until the weapon is returned to DoD control and properly recorded on a Component Registry. Weapons identified as other than DoD in origin will be placed in the inactive file of the DoD registry.
- Identify duplicate serial numbers received from the Component Registries, as a minimum, on a quarterly basis. The appropriate DoD Component will be contacted to verify duplicates and the DoD Registry will issue selected suffixes to modify affected serial number(s) for all but one of the duplicate numbers. Weapons with duplicate serial numbers located in the wholesale system will be modified first, to the extent possible. In

order to maintain an audit trail for all modification actions:

- Appropriate corrective instructions will be provided to Component Registries reporting duplicate serial numbers.
- A complete historical cross-reference record (mechanical or hard copy) will be established.

19.5.2 COMPONENT REGISTRY

Component Registries will:

- Maintain and control a mechanized active, and inactive, history file to control small arms serial numbers for which they maintain or had maintained accountability.
- Update files based on transaction reporting; e.g., receipts, issues, turn-ins, and inter-Service transfers. Suffix codes will be perpetuated from all receipt/issue/adjustment transactions when updating files.
- Use TS 140 IC - Small Arms Reporting and TS 888 IC - Small Arms Data Change (appendices 19A and 19B) to interface between Component Registries for reporting changes affecting the small arms status in the master file of the Component Registries.
- Monthly, mail a magnetic tape to the DoD Registry reflecting active and inactive files in serial number sequence. The address is: Commander, U.S. Army Armament Munitions and Chemical Command, ATTN: AMSMC-MMD-LW, Rock Island, IL 61299-6000.
- Identify duplicate serial numbers recorded on file and request altering instructions from the DoD Registry for all but one of the duplicate numbers. Suspend movement of these weapons pending verification of the record and/or receipt of instructions for modification of the serial number on the weapon.
- Provide data available upon receipt of an inquiry from a law enforcement agency, and initiate action as deemed appropriate.
- Perform an annual records verification utilizing the registry files to obtain records compatibility with depot custodial files and ICP accountable files by stock number and quantity.
- Report weapons lost, damaged or destroyed in accordance with DoD 7200.10-M. TS 140 IC - Small Arms Reporting with Small Arms Transaction Code Q (Notification of Suspected Loss) is applicable for reporting potential lost or stolen small arms, pending full investigation and Financial Liability Investigation of Property Loss (DD Form 200) report. TS 140 - IC - Small Arms Reporting with Small Arms Transaction Code U (Found or Recovered) is applicable for reporting if the missing weapon is found or recovered.
- Identify on the Component Registry, TS 140 IC - Small Arms Reporting with Small Arm Transaction Code L (Inventory Adjustment - Loss), weapons determined to be lost or stolen after all investigative requirements have been initiated, including a Financial Liability Investigation of Property Lost report. (Note: DoD Components are required to submit semiannual reports to the Chairperson, Physical Security Review Board, in accordance with DoD 5100.76-M, for all weapons where theft, loss, and recovery occur.)

- Perform an annual reconciliation with all activities recorded on the registry as having possession and/or accountability of reported small arms by serial number, stock number, and quantity. The method of performing the reconciliation will depend on the Components' capability of utilizing DDN transaction sets, tapes, or listings. When tapes or listings are used to perform the annual reconciliation, they will be identified by the appropriate transaction set either as header information or reflected with each line entry (see subsection 19.7.8). Report all new weapons or devices that could be construed as weapons to the JSACG Chairperson. The chairperson will identify the reportability and notify the Services/Agency. Weapons or devices for which no determination can be made will be discussed by the full JSACG.

19.5.3 JSACG RESPONSIBILITIES

The JSACG responsibilities are as set forth in DoD 4140.1-R. The mailing address for the JSACG is: Defense Logistics Management Standards Office, ATTN: Small Arms Program Administrator, Suite 230, 6301 Little River Turnpike, Alexandria, VA 22312-3508.

19.6 SAFEGUARDING AND PHYSICAL SECURITY OF ADP RECORDED DATA

The small arms data contained in the ADP records of the DoD Registry could produce classified data if the total number of serial numbers by weapon type were summarized. Consideration should be given to security of the small arms records due to their sensitive nature. Security of ADP records will be in accordance with DoD 5200.1-R.

A determination to classify shall be made when there is sound reason to believe that knowledge of the information would provide a foreign national with an insight into the war potential, war defense plans, or posture of the United States and could reasonably be expected to cause a degree of harm to the national security.

The operation of this program does not relieve units/activities from the requirements for physical security of weapons in accordance with DoD Component regulations.

19.7 OPERATING PROCEDURES

19.7.1 COMPONENT REGISTRIES

The Component Registries will forward a tape record of their active and inactive files, in serial number sequence, to arrive at the DoD Registry not later than the 10th of each month. The tape record format will be in accordance with appendix 19A. The DoD Registry will verify record counts as indicated on the tape.

19.7.2 DOD REGISTRY

The DoD Registry will combine the Components' tapes into a single file, in serial number sequence, not later than the 15th day of each month. The DoD Registry will identify duplicate serial numbers, as a minimum quarterly, in accordance with subsection 19.5.1.

- If the duplicate serial numbers appear during the next check, and are owned by a single Service, the Component Registry will be notified to validate the serial numbers. If duplicate serial numbers remain after this validation, the Component Registry will take action to request altering instructions from the DoD Registry to modify affected serial number(s). The DoD Registry will issue modified serial numbers(utilizing selected alpha suffix(es)) and maintain a complete historical cross-reference record.

- If the duplicate serial numbers appear during the next check, and are owned by more than one DoD Component, the DoD Registry will notify each Component Registry to validate its serial numbers. If duplicates remain after this validation process, the DoD Registry will issue modified serial numbers to one of the Component Registries (utilizing selected alpha suffix(es)) and maintain a complete historical cross-reference record.

19.7.3 RECOVERED WEAPONS

Weapons recovered by law enforcement agencies or foreign countries and returned to the custody of a DoD Component will be registered on the Component Registry using TS 140 IC - Small Arms Reporting with Small Arms Transaction Code U (Found or Recovered).

19.7.4 INTER-SERVICE/AGENCY TRANSFERS

TS 140 IC - Small Arms Reporting is used to report inter-Service/Agency transfers between the Component Registries. The requirements for reporting shipments will be as indicated in the following subsections.

19.7.4.1 SHIPMENTS BETWEEN DOD COMPONENTS

When small arms are selected for shipment by the shipping activity, TS 140 IC - Small Arms Reporting with Small Arms Transaction Code S (Shipment) will be provided to the shipping Component Registry. The shipping Component Registry enters the small arms data in the active file to indicate the intransit shipment. The shipping Component Registry then forwards the transaction set to the destination Component Registry for all inter-Service/Agency shipments.

The receiving Component Registry enters the small arms data into the active file to open the record. This record is maintained until confirmation of receipt of the weapon is provided by the receiving activity. The receiving activity verifies the serial number(s) and provides TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R (Receipt) to their Component Registry. The receiving Component Registry matches the small arms data against the intransit record. A match constitutes a reconciliation and completes the record. Discrepant serial number(s) will be verified by telephone or letter and corrective action taken as required. The receiving Component Registry provides TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R to the shipping Component Registry.

Weapon shipments from one DoD Component to another for maintenance purposes will also be reported to appropriate Component Registries. This requirement will be included in any maintenance support agreement.

If 30 calendar days from date of shipment for CONUS and 90 calendar days for overseas is exceeded, coordination will be initiated by the shipping Component Registry to determine the status of the outstanding TS 140 IC - Small Arms Reporting with Small Arms Transaction Code(s) S (see subsection 19.8.1). (For receiving Component Registry procedures, see subsection 19.8.2.) A monthly overage shipment listing will also be provided to the receiving Component Registry.

19.7.4.2 SHIPMENTS FROM PROCUREMENT

When small arms are shipped from a contractor to activities within the DoD, the contractor is required to prepare TS 140 IC - Small Arms Reporting with Small Arms Transaction Code P (Procurement Gains). The transaction set will be provided to the shipping Component Registry giving notification of shipment. The data are entered in the shipping Component Registry to

open the record. This record will be maintained in suspense until confirmation of receipt of the weapon is provided by the receiving activity. The receiving activity will submit TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R to update its Component Registry.

19.7.4.3 SHIPMENTS OUTSIDE THE CONTROL OF DOD

When small arms are selected for shipment outside the control of the DoD, the shipping activity will provide TS 140 IC - Small Arms Reporting with Small Arms Transaction Code Transaction Code N (Shipment to Other Agencies) or Small Arms Transaction Code F (Shipment to FMS/Grant Aid) (depending on type of shipment) to the shipping Component Registry. The shipping Component Registry codes each weapon in the shipment and enters the small arms shipment data into the inactive file. Weapons returned to the DoD supply system from previous shipments to FMS/Grant Aid and other agencies outside the control of DoD will be registered by the receiving activity on its Component Registry.

19.7.5 DEMILITARIZATION

When small arms are selected for destruction at the demilitarization activity, TS 140 IC - Small Arms Reporting with Small Arms Transaction Code V (Demilitarization) is provided to the Component Registry once the demilitarization has been completed. The Component Registry codes each of the weapons demilitarized and enters the small arms demilitarization data into the inactive file.

19.7.6 DOD SMALL ARMS SERIALIZATION PROGRAM

The DoD Small Arms Serialization Program is designed to provide investigative agencies with the identification of the last accountable activity having a specific serial numbered small arm within 72 hours. Investigative agencies will process all inquiries by message, letter, or telephone to the DoD Registry. The DoD Registry will identify the accountable Component Registry from the data contained in its master record and query that registry as to the last activity accountable for the specific serial numbered weapon. Once the Component Registry identifies the last accountable activity, response is provided to the investigative agency through the DoD Registry.

19.7.7 INVALID OR ERRONEOUS TRANSACTIONS

TS 140 IC - Small Arms Reporting or TS 888 IC - Small Arms Data Change which contain invalid or erroneous data, except TS 140 IC - Small Arms Reporting with Small Arms Transaction Code K (Multi-Field Correction) (see subsection 19.7.10), will be rejected by the Component Registry to the originator of the transaction set using TS 888 IC - Small Arms Data Change with the appropriate Small Arms Error Transaction Reject Code. Since TS 888 IC - Small Arms Data Change may contain more than one Small Arms Error Transaction Reject Code, activities will ensure that all of the error conditions are corrected prior to resubmission.

- Rejected transactions will be held in a suspense file by the Component Registry until corrective action has been received from the DoD Component. TS 888 IC - Small Arms Data Change with the appropriate Small Arms Error Transaction Reject Code will be used to respond to rejected transactions.
- In the event no corrective action is received by the Component Registry within 14 calendar days, a TS 140 IC - Small Arms Reporting followup, will be forwarded to the DoD Component.

19.7.8 ANNUAL RECONCILIATION

The annual reconciliation of all small arms on the Component Registry will be performed using TS 140 IC - Small Arms Reporting with Small Arms Transaction Code E (Intra-Service/Agency Reconciliation). Matching records will be considered reconciled. Duplicate small arms serial numbers detected during the reconciliation will require modification instructions from the DoD Registry. Component Registries that perform the annual reconciliation using other than transaction reporting will ensure that listings contain TS 140 IC - Small Arms Reporting with Small Arms Transaction Code E in the heading. Small Arms Transaction Code E need not be identified on the listing or posted to the Component Registry.

- Records not matched, or for small arms for which no reconciliation was received by the Component Registry, will result in a reject, TS 140 IC - Small Arms Reporting with the appropriate Small Arms Error Transaction Reject Code(s), to the DoD Component.
- In the event corrective transactions and/or notification of a problem is not received from the DoD Component within 60 calendar days, the Component Registry will followup using TS 140 IC - Small Arms Reporting.

19.7.9 MASS STOCK NUMBER/DODAAC CHANGES

Mass stock number changes and mass DoDAAC changes will be accomplished using TS 888 IC - Small Arms Data Change with Small Arms Transaction Code H (Mass Stock Number Change) or M (Mass DoDAAC Change).

19.7.10 MULTI-FIELD CORRECTIONS

TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K (Multi-Field Correction) will be used by reporting activities to change erroneous information on the Component Registry active/inactive file. The Component Registry will reject TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K that do not match the file or contain invalid data.

- Reporting activities will prepare the TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K when the Component Registry contains erroneous information. Changes can be made to the NSN/MCN/LCN/DoDAAC of the accountable activity and serial number.
- TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K received by the Component Registry that do not match the NSN/MCN/LCN, reporting activity DoDAAC, or serial number contained on the active/inactive file will be rejected to the reporting activity. The rejected TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K will contain the appropriate Small Arms Error Transaction Reject Code. Rejected transactions will be suspended in the Component Registry pending receipt of a corrected TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K. As more than one Small Arms Error Transaction Reject Code may be reflected in the rejected TS 888 IC - Small Arms Data Change with Small Arms Transaction Code K, the reporting activity must review all entries for invalid data before resubmitting the corrected transaction.
- Component Registries will not include TS 888 IC - Small Arms Data Change with Small Arms Transaction code K on their overlay tape to the DoD Registry. The Component Registry will convert TS 888 IC - Small Arms Data Change with Small Arms Transaction

Code K received from the reporting activity to TS 140 IC - Small Arms Reporting with Small Arms Transaction Code K.

19.8 TIME STANDARDS FOR PROCESSING UPDATES AND FOLLOWUPS FOR SHIPMENTS AND RECEIPTS

19.8.1 VISIBILITY OF WEAPONS

One objective of the small arms serial number registration and reporting procedures is to provide visibility of actual location of all weapons by the timely update of the Component Registries during the shipment or receipt process. The timeframe requirements for processing TS 140 IC - Small Arms Reporting for Small Arms Transaction Codes R and S are established as 10 calendar days from date of action.

- Within 10 calendar days of selection for shipment, the shipping activity will forward TS 140 IC - Small Arms Reporting with Small Arms Transaction Code S to the shipping Component Registry to indicate which serial numbers are included in the intransit shipment. Activities that do not have mechanized capability will provide the TS 140 IC - Small Arms Reporting with Small Arms Transaction Code S or hard copy information to the shipping Component Registry by the fastest means available, leaving the shipping activity within 10 calendar days of selection for shipment.
- Within 10 calendar days of receipt of TS 140 IC - Small Arms Reporting with Small Arms Transaction Code S from the shipping activity, the shipping Component Registry will update its files, establish the intransit record, and forward the TS 140 IC - Small Arms Reporting to the receiving Component Registry for all inter-Service/Agency shipments.
- Within 10 calendar days of receipt of the small arms, the receiving activity will use the data that accompanied the shipment to verify the serial number(s) received and provide TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R to the receiving Component Registry. Activities that do not have mechanized capability will provide the TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R or hard copy information to the receiving Component Registry by the fastest means available.
- Within 10 calendar days of receipt of TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R from the receiving activity, the receiving Component Registry will forward TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R to the shipping Component Registry providing notification of receipt of weapons. The 10 calendar days requirement for notification of shipments/receipts also applies to weapon shipments from one DoD Component to another for maintenance purposes. This requirement will be included in any maintenance support agreements between the DoD Components.

19.8.2 OVERAGE SHIPMENTS

The shipping Component Registry will take followup action for all weapons intransit 30 calendar days for CONUS shipments and 90 calendar days for overseas shipments, from date of shipment, for which no confirmation of receipt TS 140 IC - Small Arms Reporting with Small Arms Transaction Code R has been received. TS 140 IC - Small Arms Reporting receipt/shipment followup, prepared as specified in appendix 19A, will be transmitted to the receiving Component Registry. Allow 10 calendar days for response to the followup transaction.

- If the weapon has been received, the receiving Component Registry will submit TS 140

IC - Small Arms Reporting with Small Arms Transaction Code R .

- If the weapon has not been received, the receiving Component Registry will submit TS 140 IC - Small Arms Reporting with Small Arms Transaction Code A (Weapon Not Received).
- If no response is received, an electronic transmission (message) will be sent to the receiving Component Registry with an information copy to the receiving activity and its higher headquarters.
- Negative response or no response to the message will result in the shipping Component Registry reporting the weapon(s) as missing, lost, or stolen, to their appropriate investigative agency and the DoD Registry (see subsection 19.5.2).

19.8.3 SHIPMENT FOLLOWUP PROCEDURES

Followup procedures will be initiated by the receiving Component Registry for all weapons received for which no TS 140 IC - Small Arms Reporting with Small Arms Transaction Code S was provided by the shipping Component Registry. The followup procedure is necessary to confirm that the serial number(s) reported as received matches the serial number(s) selected and shipped. The receiving Component Registry will take the followup action with the shipping Component Registry within 10 calendar days after a weapon(s) has been confirmed as received using a TS 140 IC - Small Arms Reporting receipt/shipment followup transaction. Lack of response within 10 calendar days will result in an electronic transmission (message) being sent to the shipping Component Registry with an information copy to the shipping activity and its higher headquarters.

19.8.4 INTRA-SERVICE/AGENCY TIMEFRAMES

The standard timeframes for inter-Service/Agency submission of TS 140 IC - Small Arms Reporting with Small Arms Transaction Codes R and S, as prescribed above, also apply to intra-Service/Agency shipments and receipts.

APPENDIX 19A

TRANSACTION SET 140 IMPLEMENTATION CONVENTION SMALL ARMS REPORTING

140 Product Registration

This Draft Standard for Trial Use contains the format and establishes the data contents of the Product Registration Transaction Set (140) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to specify the manufacturer, seller, secondary warranter, and purchaser or lessee of the product. It can specify the date the product was sold, delivered, and placed in service as well as identify the product model and serial numbers. It can specify the class of service expected from this individual sale, for example: industrial, commercial, or household. This registration information can be used to divide sales commissions among sales associates or attribute license fees to the proper manufacturer. It can be used to submit many product registrations at one time to one receiving organization.

Implementation Notes

1. Organizations use this transaction set to report small arms, reconcile small arms data records, reject small arms data transactions, inquire about small arms reports, and resubmit unacknowledged reject transactions.
2. Use a single occurrence of this transaction set to transmit small arms information to one or more organizations. Use one occurrence of this transaction set to transmit single or multiple transactions.

NOTES/COMMENTS:

- 1/020** BGN02 is used as the initial reference identifier for this transaction. BGN03 defines the date of this registration transaction. Normally BGN04 and BGN05 would not be used in this transaction. BGN01 is normally set to 00 to indicate that this is an original registration. Product registration is normally a by-product of a sale.
- 1/030** The N9 segment can provide a reference to a previous registration transaction. For example, this could be a replacement of a previous registration transaction.
- 1/040** The N1 loop defines the party submitting the product registration, usually the seller of the product rather than the customer, and the party who maintains the registration database, usually the manufacturer of the product. The N1 loop also can be used to specify the product's distributor.
- 2/010** Each iteration of the LX loop is used to group one or more products that are being registered to one individual or organization.
- 2/015** The REF segment is used to identify the individual registration number. It can include the data element 128, code value Q8, "Registration Number."
- 2/020** The N1 loop is used to identify the individual or organization responsible for the registration. This could be the purchaser, the lessee, the operator, etc. This is the party registered to be notified if a product recall is required. Successive iterations could identify other individuals and organizations who are involved in some manner. It also could be used to specify if the product is to be installed or housed at a location that is different than that listed for the registration. An additional use of the N1 loop has been requested to be able to include the salesperson who sold the product or service contract and the service manager who would be responsible for servicing the product.
- 2/060** The PER segment is used to provide an individual's or department's name for a particular support function and, if desired, their communication number for a phone, electronic mail, etc.
- 2/080** The REF segment could be used to identify the item into or onto which this product being warranted will be residing. For example, when a controller is attached to a numerically controlled machine tool, part of the registration could include information about the machine tool. The machine tool could be identified with multiple occurrences of the REF segment. A similar situation would be if an engine were being replaced in a heavy duty truck. The REF segment could then be used to specify the vehicle.
- 2/090** There is a separate LIN segment for each product included in this sale represented by the single iteration of the LX loop. The LIN segment will contain the product's model number and serial number in data element 234-235 combinations. The other pairs can be used to provide other information about the product.
- 2/100** The PID segment can be used to provide additional information regarding the product. However, it seldom will be required. When it is used, PID06, data element 752, is not required.
- 2/110** The QTY segment is used to reflect the quantity of items that do not have a serial number. QTY01 will have a discrete quantity qualifier of 01. For all items with a serial number, the value to be used is either explicitly or implicitly set to one.

- 2/120** The DTM segment in the LIN loop can be used to specify the dates that are significant to the registration such as delivery, installation, placed in service, failed, brought in for service, etc.
- 2/130** The REF segment can identify information about the product that was not able to be coded in the preceding segments. For example, it can be used to specify the warranty coverage code and the warranty registration number.
- 2/140** The N1 loop within the LIN loop provides the same capabilities for the single product as the N1 loop above in the LX loop provides for the entire sale.
- 2/180** The PER segment is used to provide an individual's or department's name or functional area and, if desired, their communication number for a phone, electronic mail, etc.
- 2/190** The PSC loop in the LIN loop refers to the warranty or service contract for the entire product described by the LIN segment. If special operating conditions that could affect the registration are to be noted, such as a household product being used commercially, this would be placed in the PSC segment. Unless noted to the contrary, it will be assumed that the product will be used in its most normal capacity. For example, a kitchen appliance, unless specifically stated to the contrary, will be assumed to be used within a household. The PSC loop also may be used when a for fee registration is being specified, such as an extended warranty or service contract. The PSC segment also may be used without the other segments in the loop to describe conditions of a standard, free warranty registration. The PSC segment is used to specify the period for the warranty or service contract. There may be other measures of service life of a product such as operation counter, an odometer to measure mileage of a vehicle, or a clock that measures operational hours.
- 2/200** The SSS special service segment is used in conjunction with the PSC segment to add any extra services to be specified within the service contract. For example, there may be a clause for 24 hour service or a guaranteed service response of no more than so many hours.
- 2/210** The repeated use of the AMT segment within the PSC loop allows the total amount of the contract to be specified as well as any special conditions on the amount.
- 2/220** The CUR segment is only required when the service contract is to be paid across national boundaries.
- 2/230** The ITA segment would be used in those special cases where the normal service contract cost does not apply. For example, in fleet sales, the product and its service contract may be bought from a local dealer, but because one purchaser buys many of them from several dealers spread across a geographic area, they get a discount or extra service on the purchase.
- 2/240** The TXI, Tax Information segment, can be used to list the sales tax paid on a service contract. Also it identifies the taxing authority.
- 2/250** The ITD segment is to be used in the case where the service contract is to be paid at regular intervals over the life of the contract. For example, the payments might be monthly or quarterly.
- 2/260** The N9 segment within the PSC loop can contain a unique code identifying the terms of the service contract. For example, repair order number or contract num-

ber as preassigned by the product's manufacturer. It also can be used to record the customer's method of payment for a service contract. It then would be used to contain the check number or charge card number. The expiration date on the charge card does not need to be recorded as the computer program entering the transaction only has to check that the card has not expired. N903 will be able to contain the name of the issuer of the card.

- 2/270** The SLN loop is used to describe subassemblies or parts within an assembly that may be covered by separate warranty conditions. A pair of data elements 234 and 235 in the SLN segment will be used to contain the serial number, lot number, model number, etc. of the subassembly being registered. All the loops and segments within the SLN loop perform the same functions for the subassemblies as their counterparts above did for the product.
- 2/320** The N1 loop within the SLN loop provides the same capabilities for the single product as the N1 loop above in the LX loop provides for the entire sale. However, the assembly whose information is in the N1 loop is part of the product specified in the SLN loop.
- 2/360** The PER segment is used to provide an individual's or department's name or functional area and, if desired, their communication number for a phone, electronic mail, etc.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
		140	X12.200 Product Registration			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BGN Beginning Segment**Level:** Header**Loop:** _____**Mandatory****Usage:** Mandatory**Max Use:** 1**Purpose:** To indicate the beginning of a transaction set.**Syntax:** C0504 — If BGN05 is present, then BGN04 is required.**Semantic:** 1. BGN02 is the transaction set reference number.

2. BGN03 is the transaction set date.

3. BGN04 is the transaction set time.

4. BGN05 is the transaction set time qualifier.

5. BGN06 is the transaction set reference number of a previously sent transaction affected by the current transaction.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BGN01 353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 15 Re-Submission Code Value Implementation Note: <i>Use to identify the resubmission of a reject transaction for which a response is not received within the allotted time frame. When using, cite code W5 in BGN07 and code U in BGN08.</i> 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>	M ID 2/2
Mandatory	BGN02 127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier. Implementation Note: <i>Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.</i>	M AN 1/30
Mandatory	BGN03 373	Date Date (YYMMDD). Implementation Note: <i>Express the originating activity's date of transaction set preparation in GMT.</i>	M DT 6/6

Required	BGN04	337	Time	C	TM	4/8
			Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)			
			Implementation Notes:			
			1. Express the originating activity's time of transaction set preparation in GMT.			
			2. Express time in a four-position (HHMM) format.			
Not Used	BGN05	623	Time Code	O	ID	2/2
Not Used	BGN06	127	Reference Number	O	AN	1/30
Required	BGN07	640	Transaction Type Code	O	ID	2/2
			Code specifying the type of transaction.			
			W4 Weapons Control Report			
			Code Value Implementation Note:			
			Use when the transaction set contains a small arms report. Use in conjunction with BGN08, code T, when the transaction set contains a small arms report inquiry.			
			W5 Weapons Control Report Reconciliation			
			Code Value Implementation Note:			
			Use when the transaction set contains a small arms reconciliation report. Use in conjunction with BGN08, code T, when the transaction set contains a reconciliation report inquiry. Use in conjunction with BGN08, code U, when the transaction set contains a reject report.			
Optional	BGN08	306	Action Code	O	ID	1/2
			Code indicating type of action.			
			T Status Query			
			Code Value Implementation Note:			
			Use in conjunction with BGN07, code W4, when the transaction set contains a small arms report inquiry. Use in conjunction with BGN07, code W5, when the transaction set contains a reconciliation report inquiry.			
			U Reject			
			Code Value Implementation Note:			
			Use in conjunction with BGN07, code W5, when the transaction set contains a reject report.

	Max Use: 1				
	Purpose: To identify a party by type of organization, name and code				
	Syntax: 1. R0203 — At least one of N102 or N103 is required.				
	2. P0304 — If either N103 or N104 is present, then the other is required.				
	Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.				
	2. N105 and N106 further define the type of entity in N101.				
Implementation Notes:					
1. The 1/N1/040 loop will, as a minimum, cite the organization originating the transaction set.					
2. Use this 1/N1/040 loop to indicate an organization when an N101 qualifier code (e.g., ST) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/020 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1 chapter 10). Do not cite any qualifier code in 1/N101/040 that does not apply to all of the table 2 iterations. (Codes subject to override: SF, and ST.)					
Data Element Summary					
Mandatory	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
	N101	98	Entity Identifier Code	M ID	2/2
	Code identifying an organizational entity, a physical location, or an individual				
	SF Ship From				
	Code Value Implementation Note:				
	Use in small arms reports of receipt to identify the activity which shipped small arms.				
	ST Ship To				
	Code Value Implementation Note:				
	Use in small arms reports of shipment or inquiries about small arms reports of shipment to identify the ship-to organization.				
	Not Used	N102	93	Name	C AN
Required	N103	66	Identification Code Qualifier	C ID	1/2
	Code designating the system/method of code structure used for Identification Code (67).				
	10 Department of Defense Activity Address Code (DODAAC)				
	M4 Department of Defense Routing Identifier Code (RIC)				
Required	N104	67	Identification Code	C AN	2/20
	Code identifying a party or other code.				

Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code	O	ID	2/2
			Code identifying an organizational entity, a physical location, or an individual			

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/040 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Segment: PER Administrative Communications Contact

Level: Header

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.
 2. P0506 — If either PER05 or PER06 is present, then the other is required.
 3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use only under exceptional circumstances when requiring direct communication with the party originating the transaction set.
2. Use multiple repetitions to identify a POC and multiple communication numbers. When using multiple repetitions to identify different communication numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact Code Value Implementation Note: Must use in the first repetition to identify the primary point of contact and their primary communication number.	M ID 2/2
Required	PER02	93	Name Free-form name.	O AN 1/35
			Implementation Note: Provide the last name, first name, middle initial, and rate/rank/title, as required, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.	
Required	PER03	365	Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
			Implementation Notes: 1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional repetitions of the PER segment to identify more than three numbers. 2. Do not include blank spaces or dashes between numbers.	
			AU Defense Switched Network	

			Code Value Implementation Note: <i>Use to identify the DSN telephone number.</i>

Mandatory

Segment: LX Assigned Number

Level: Detail

Loop: LX **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To reference a line number in a transaction set.

Implementation Note:

Use as a counter to identify the number of 2/LX/010 loop iterations in the transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LX01	554	Assigned Number	M	N0	1/6
Number assigned for differentiation within a transaction set.					

Implementation Note:

In the first 2/LX/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Required	Segment: REF Reference Numbers				
	Level: Detail				
	Loop: LX				
	Usage: Optional				
	Max Use: >1				
Mandatory	Purpose: To specify identifying numbers.				
	Syntax: R0203 — At least one of REF02 or REF03 is required.				
	Implementation Note:				
	<i>Use to identify the transaction reference number and suffix associated with the transaction.</i>				
	Data Element Summary				
Mandatory	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
	REF01	128	Reference Number Qualifier	M	ID 2/2
			Code qualifying the Reference Number.		
			TN Transaction Reference Number		
			W8 Suffix		
Required	Code Value Implementation Note:				
	<i>Use as needed to identify the suffix associated with the transaction number.</i>				
	REF02	127	Reference Number	C	AN 1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.		
Not Used	REF03	352	Description	C	AN 1/80

Mandatory

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Must use the 2/N1/020 to identify the accountable organization for small arms.
2. For any specific table 2 iteration use this 2/N1/020 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/040 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them, or 3) to override an address in the 1/N1/040 loop with a different address specified in the 2/N1/020 loop when the same N101 qualifier is used in both loops but the N104 address is different. (Codes subject to override: SF and ST.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		QD Responsible Party	
		Code Value Implementation Note:	
		Use to identify the accountable organization responsible for the small arms. Identify the organization that last possessed the small arms when transmitting small arms reports of shipment. Identify the new accountable organization when changing or correcting the accountable activity.	
		SF Ship From	
		Code Value Implementation Note:	
		Use in small arms reports of receipt to identify the activity which shipped small arms.	
		ST Ship To	
		Code Value Implementation Note:	
		Use in small arms reports of shipment or inquiries about small arms reports of shipment to identify the ship-to organization.	

Not Used

N102 93 Name C AN 1/35

Required

N103 66 Identification Code Qualifier C ID 1/2
Code designating the system/method of code structure used for Identification Code (67).

10 Department of Defense Activity Address Code (DODAAC)

M4 Department of Defense Routing Identifier Code (RIC)

Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use code TO in conjunction with the appropriate 2/N101/020 code to indicate the organization receiving the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 2/LM/086 loop to identify DoD unique coded data related to small arms reporting requirements.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M ID 2/2

Optional

LM02	822	Source Subqualifier A reference that indicates the table or text maintained by the Source Qualifier.	O AN 1/15
------	-----	--	-----------

Mandatory	Segment:	LQ Industry Code		
	Level:	Detail		
	Loop:	LM		
	Usage:	Mandatory		
	Max Use:	100		
	Purpose:	Code to transmit standard industry codes		
	Syntax:	C0102 — If LQ01 is present, then LQ02 is required.		
Implementation Note:				
Use to identify codes, as appropriate, consistent with management information requirements.				
Data Element Summary				
Required	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O ID 1/3
Implementation Note:				
Use only one of codes EW or EX in every 2/LX/010 loop iteration. Do not use either code for inquiry transactions.				
0 Document Identification Code				
EW Small Arms Error Transaction Reject Code				
Code Value Implementation Note:				
Use in reject report and reject resubmission transactions to identify the reason for reject. Cite only one code.				
EX Small Arms Transaction Code				
Code Value Implementation Note:				
Use in small arms reports, reconciliation reports, and reports of changes or correction to identify the appropriate transaction code. Cite only one code.				
Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20

Mandatory

Segment: LIN Item Identification

Level: Detail

Loop: LIN **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

Comments: 1. See the Data Dictionary for a complete list of ID's.

2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use to identify report material identification, serial number data and date information on small arms.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Not Used	LIN01	350	Assigned Identification	O	AN	1/11
Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
Implementation Notes: 1. Use only one of codes A3, AN, FS, or MG to identify the item. 2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE. A3 Locally Assigned Control Number AN Asset Number Code Value Implementation Note: Use to identify the management control number. FS National Stock Number Code Value Implementation Note: Must use the NSN when known. MG Manufacturer's Part Number ZB Commercial and Government Entity (CAGE) Code Code Value Implementation Note: Use only with code MG to identify a manufacturer's part number.

Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Optional

Segment: REF Reference Numbers
Level: Detail
Loop: LIN
Usage: Optional
Max Use: >1
Purpose: To specify identifying numbers.
Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:
Use as needed to identify small arms serial number data.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	REF01	128	Reference Number Qualifier	M	ID	2/2
			Code qualifying the Reference Number.			
			SE Serial Number			
Required	REF02	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Not Used	REF03	352	Description	C	AN	1/80

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

Use to identify the small arms manufacturer if duplicate serial numbers are assigned to the same item identified in 2/LIN/090.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual MF Manufacturer of Goods	M ID 2/2
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67).	C ID 1/2

Segment: SE Transaction Set Trailer

Level: Detail

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

APPENDIX 19B

TRANSACTION SET 888 IMPLEMENTATION CONVENTION SMALL ARMS DATA CHANGE

888 Item Maintenance

This Draft Standard for Trial Use provides the format and establishes the data contents of the Item Maintenance Transaction Set (888) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set is used to enable a manufacturer, supplier, broker, or agent to provide detailed finished goods product information to a partner in a consumer goods market. This transaction set can be used to provide information about new products or changes in existing product specifications. Price changes will not be sent with this transaction set, but can be sent with the Price Change Transaction Set (879).

Implementation Notes

1. Organizations use this transaction set to report small arms data corrections and changes, including small arms reject response corrections and changes, for data recorded in component registries, DoD registries and originator records.
2. Use a single occurrence of this transaction set to transmit small arms changes or corrections to one or more organizations. Use one occurrence of this transaction set to transmit a single or multiple transactions.

Table 1

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT

NOTES/COMMENTS:

1/020 One iteration of the N1 loop should be used to identify the buying party (BY) to establish the area or location for which the item maintenance applies.

2/020 The G62 segment is used to specify the effective date for the item maintenance action reflected in G5301.

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 888 X12.269 - Item Maintenance (UCS)	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Required

Segment: BGN Beginning Segment

Level: Header

Loop: _____

Usage: Optional

Max Use: 1

Purpose: To indicate the beginning of a transaction set.

Syntax: C0504 — If BGN05 is present, then BGN04 is required.

Semantic:

1. BGN02 is the transaction set reference number.
2. BGN03 is the transaction set date.
3. BGN04 is the transaction set time.
4. BGN05 is the transaction set time qualifier.
5. BGN06 is the transaction set reference number of a previously sent transaction affected by the current transaction.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	BGN01	353 Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>	M	ID	2/2
Mandatory	BGN02	127 Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier. Implementation Note: <i>Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.</i>	M	AN	1/30
Mandatory	BGN03	373 Date Date (YYMMDD).	M	DT	6/6
		Implementation Note: <i>Express the originating activity's date of transaction preparation in GMT.</i>			
Not Used	BGN04	337 Time	C	TM	4/8
Not Used	BGN05	623 Time Code	O	ID	2/2
Not Used	BGN06	127 Reference Number	O	AN	1/30
Required	BGN07	640 Transaction Type Code Code specifying the type of transaction. W1 Weapons Data Change	O	ID	2/2

Code Value Implementation Note:

Use when the transaction set contains changes or corrections to small arms data.

Not Used

BGN08 306 Action Code

O ID 1/2

Mandatory

Segment: N1 Name

Level: Header

Loop: 0100 **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/020 loop will, as a minimum, cite the organization originating the transaction set.

2. Use this 1/N1/020 loop to indicate an organization when an N101 qualifier code (e.g., QD) applies to ALL table 2 iterations and the same address (N104 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the address is to differ from the one indicated in table 1, use the 2/N1/156 loop and specify the matching qualifier in N101 and the different address in N104. This address will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/N101/020 that does not apply to all of the table 2 iterations. (Codes subject to override: QD and ZA.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual KK Registering Party Code Value Implementation Note: Use to identify the organization to receive the transaction set. QD Responsible Party Code Value Implementation Note: Use when changing or correcting the accountable organization to identify the old accountable organization's DODAAC. RL Reporting Location Code Value Implementation Note: Use to indicate the reporting activity originating the transaction set. ZA Corrected Address Code Value Implementation Note: Use when changing or correcting the accountable organization to identify the new accountable organization's DODAAC.	M ID 2/2

Not Used

N102	93	Name	C AN 1/35
------	----	-------------	-----------

Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) 33 Commercial and Government Entity (CAGE) Code Value Implementation Note: <i>Use when the contractor is not assigned a DoDAAC.</i> M4 Department of Defense Routing Identifier Code (RIC)	C	ID	1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/020 code to indicate the organization sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: G61 Contact

Level: Header

Loop: ____

Usage: Optional

Max Use: 3

Purpose: To identify a person or office to whom communications should be directed

Syntax: P0304 — If either G6103 or G6104 is present, then the other is required.

Comment: G6103 qualifies G6104.

Implementation Notes:

1. Use only under exceptional circumstances when requiring direct communication with the party originating the transaction set.

2. Use multiple repetitions, as needed, to identify multiple communication numbers. When using multiple repetitions to identify different communication numbers, repeat the name cited in G6102.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	G6101	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact Code Value Implementation Note: Must use in the first repetition to identify the primary point of contact and their primary communication number.	M ID 2/2
Mandatory	G6102	93	Name Free-form name.	M AN 1/35
			Implementation Note: Provide the last name, first name, middle initial, and rate/rank/title, as required, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.	
Required	G6103	365	Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
			Implementation Notes: 1. Use to identify the preferred method of communication in the first repetition. Use additional repetitions when identifying alternate communication methods. 2. Do not include blank spaces or dashes between numbers. AU Defense Switched Network Code Value Implementation Note: Use to identify the DSN telephone number. EM Electronic Mail FT Federal Telecommunications System (FTS) Code Value Implementation Note: Use to identify the FTS telephone number. FX Facsimile	

Code Value Implementation Note:
Use to identify the facimile DSN telephone number.

IT International Telephone

Code Value Implementation Note:
Include country and city code as needed.

TE Telephone

Code Value Implementation Note:
Use to identify the commercial telephone number. Include the area code and number.

TL Telex

TX TWX

Required	G6104	364	Communication Number	C AN	1/80
			Complete communications number including country or area code when applicable.		

Optional	G6105	443	Contact Inquiry Reference	O AN	1/20
			Additional reference number or description to clarify a contact number.		

Implementation Note:
Use to indicate the office symbol or activity code, for the party identified.

Mandatory

Segment: G62 Date/Time

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To specify pertinent dates and times

Syntax: 1. R0103 — At least one of G6201 or G6203 is required.

2. P0102 — If either G6201 or G6202 is present, then the other is required.

3. P0304 — If either G6203 or G6204 is present, then the other is required.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	G6201	432	Date Qualifier	C	ID	2/2
Not Used	G6202	373	Date	C	DT	6/6
Required	G6203	176	Time Qualifier Code specifying the reported time. W Effective Time	C	ID	1/2
Required	G6204	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	C	TM	4/8
Implementation Note: Use to identify the time of transaction set preparation in GMT. Express time in a four-position (HHMM) format.						
Not Used	G6205	623	Time Code	O	ID	2/2
Not Used	G6206	624	Century	O	N0	2/2

Optional

Segment: LM Code Source Information**Level:** Header**Loop:** 0200 **Repeat:** >1**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Notes:**

1. Use this 1/LM/090 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., EW) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/180 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/100 that does not apply to all the table 2 iterations. (Codes subject to override: 0, EW and EX.)

2. Use only one iteration of the 1/LM/090 loop.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory

Segment: G39 Item Characteristics - Vendor's Selling Unit

Level: Detail

Loop: 0310 **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To identify a vendor's selling unit or to provide physical characteristics relative to a vendor's selling unit

- Syntax:**
1. R0102 — At least one of G3901 or G3902 is required.
 2. P0203 — If either G3902 or G3903 is present, then the other is required.
 3. P050607 — If either G3905, G3906 or G3907 are present, then the others are required.
 4. P0607 — If either G3906 or G3907 is present, then the other is required.
 5. P0809 — If either G3908 or G3909 is present, then the other is required.
 6. P1011 — If either G3910 or G3911 is present, then the other is required.
 7. P1213 — If either G3912 or G3913 is present, then the other is required.
 8. P1415 — If either G3914 or G3915 is present, then the other is required.
 9. P1819 — If either G3918 or G3919 is present, then the other is required.
 10. P2324 — If either G3923 or G3924 is present, then the other is required.
 11. P2526 — If either G3925 or G3926 is present, then the other is required.

Semantic: G3905 is the gross weight of the vendors selling unit.

Comment: Equivalent weight is given in the same unit of measure as weight.

Implementation Note:

Use the 2/G39/040 loop to identify the item being changed or corrected.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	G3901	438	U.P.C. Case Code	C	AN	12/12
Required	G3902	235	Product/Service ID Qualifier	C	ID	2/2
			Code identifying the type/source of the descriptive number used in Product/Service ID (234).			

Implementation Notes:

1. Use only one of codes A3, AN, FS, or MG to identify the item requiring data changes or corrections.

2. When citing a manufacturer's part number (code MG), always use ZB to identify the manufacturer's CAGE.

A3 Locally Assigned Control Number

AN Asset Number

Code Value Implementation Note:

Use to identify the management control number.

FS National Stock Number

Code Value Implementation Note:

Must use the NSN when known.

MG Manufacturer's Part Number

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use only with code MG to identify a manufacturer's part number.

Conditional	G3923	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use only with code MG to identify a manufacturer's part number.

Conditional	G3924	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
Not Used	G3925	187	Weight Qualifier	C	ID	1/2
Not Used	G3926	395	Unit Weight	C	R	1/8
Optional	G3927	810	Inner Pack Number of units in each selling pack	O	NO	1/6

Optional

Segment: N9 Reference Number

Level: Detail

Loop: 0310

Usage: Optional

Max Use: 10

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:
Use to identify the correct item data and the transaction number of the transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N901	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2
	Implementation Notes: 1. Use only one of codes A3, MF, NS, or X9 to identify the correct item identifying number. 2. When citing a manufacturer's part number (code MF), always use code ZM to identify the manufacturer's CAGE.					
			A3 Assignment Number			
			Code Value Implementation Note: Use to identify the correct local control number.			
			MF Manufacturers Part Number			
			Code Value Implementation Note: Use to identify the correct manufacturer's part number.			
			NS National Stock Number			
			Code Value Implementation Note: Must use the NSN when known.			
			TN Transaction Reference Number			
			Code Value Implementation Note: Use to identify the transaction number for each transaction.			
			X9 Internal Control Number			
			Code Value Implementation Note: Use to identify the correct management control number.			
			ZM Manufacturer Number			
			Code Value Implementation Note: Use only with code MF to identify a manufacturer's part number.			
Required	N902	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369	Free-form Description	C	AN	1/45

Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Required

Segment: N1 Name

Level: Detail

Loop: 0311 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 2/N1/156 loop to, as a minimum, identify the organization to receive the transaction set. Use multiple iterations of the 2/N1/156 loop to identify all transaction set recipients, as required.

2. For any specific table 2 iteration use this 2/N1/156 loop as needed: 1) to identify an organization when the N101 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/N1/020 loop or 2) when the N101 qualifier applies to all table 2 iterations but the N104 address varies among most of them or 3) to override an address in the 1/N1/020 loop with a different address specified in the 2/N1/156 loop when the same N101 qualifier is used in both loops, but the N104 address is different. (Codes subject to override: QD and ZA.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual KK Registering Party Code Value Implementation Note: Use to identify the organization to receive the transaction set. QD Responsible Party Code Value Implementation Note: Use when changing or correcting the accountable organization to identify the old accountable organization's DODAAC. ZA Corrected Address Code Value Implementation Note: Use when changing or correcting the accountable organization to identify the new accountable organization's DODAAC.	M ID 2/2

Not Used

Required

33 Commercial and Government Entity (CAGE)

Code Value Implementation Note:

Use when the contractor is not assigned a DoDAAC.

M4 Department of Defense Routing Identifier Code (RIC)

Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use code TO in conjunction with the appropriate 2/N101/156 code to indicate the organization receiving the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: G55 Item Characteristics - Consumer Unit

Level: Detail

Loop: 0312 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To provide physical characteristics relative to a consumer unit.

Syntax: 1. P0304 — If either G5503 or G5504 is present, then the other is required.

2. P0506 — If either G5505 or G5506 is present, then the other is required.

3. P0708 — If either G5507 or G5508 is present, then the other is required.

4. P0910 — If either G5509 or G5510 is present, then the other is required.

5. P1112 — If either G5511 or G5512 is present, then the other is required.

6. P1415 — If either G5514 or G5515 is present, then the other is required.

7. P232425 — If either G5523, G5524 or G5525 are present, then the others are required.

8. P262728 — If either G5526, G5527 or G5528 are present, then the others are required.

9. P2930 — If either G5529 or G5530 is present, then the other is required.

Semantic: G5521 designates whether the product is pre-priced. Code "Y" indicates the product is pre-priced. Code "N" indicates the product is not pre-priced.

Comment: G5516 is limited to 16 characters.

Implementation Note:

Use to identify serial number data changes. Use multiple iterations to change multiple serial numbers.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
G5501	235	Product/Service ID Qualifier	M ID 2/2
		Code identifying the type/source of the descriptive number used in Product/Service ID (234).	

RR Replacement Product No.

Code Value Implementation Note:

Use when changing or correcting serial number data to identify the new serial number.

SN Serial Number

Code Value Implementation Note:

Use when changing or correcting serial number data to identify the old serial number.

Mandatory	G5502	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Required	G5503	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2
Required	G5504	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
Not Used	G5505	65	Height	C	R	1/8
Not Used	G5506	355	Unit or Basis for Measurement Code	C	ID	2/2

Optional

Segment: LM Code Source Information
Level: Detail
Loop: 0313 **Repeat:** >1
Usage: Optional
Max Use: 1
Purpose: To transmit standard code list identification information
Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Must use the 2/LM/180 loop if not using the 1/LM/090 loop.
2. For any specific table 2 iteration use this 2/LM/180 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/090 loop or 2) to identify a DoD code when the LQ01 qualifier code applies to all table 2 iterations but the LQ02 DoD code varies among most of them, or 3) to override an LQ02 DoD code in the 1/LM/090 loop with a different DoD code in the 2/LM/180 loop when the same LQ01 qualifier is used in both loops, but the LQ02 DoD code is different. (Codes subject to override: 0, EW and EX.)
3. Use only one iteration of the 2/LM/180 loop for each 2/G39/040 loop iteration.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code	M	ID	2/2
			Code identifying the agency assigning the code values.			
			DF Department of Defense (DoD)			
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: **LQ Industry Code**

Level: Detail

Loop: 0313

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: **C0102** — If LQ01 is present, then LQ02 is required.

Implementation Note:
Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	LQ01	1270	Code List Qualifier Code	O	ID 1/3
			Code identifying a specific industry code list		
		0	Document Identification Code		
		EW	Small Arms Error Transaction Reject Code		
			Code Value Implementation Note: <i>Use in reject reports and reject resubmissions to identify the reason for reject.</i>		
		EX	Small Arms Transaction Code		
		Code Value Implementation Note: <i>Use to identify the transaction code that reflects the required change or correction to small arms data.</i>			
Required	LQ02	1271	Industry Code	C	AN 1/20
			Code indicating a code from a specific industry code list		

Segment: SE Transaction Set Trailer

Level: Detail

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

1 INTRODUCTION

1.1 GENERAL

This volume contains procedures and EDI conventions using ANSI ASC X12 transactions designed to effectively and efficiently control the worldwide transportation and movement of DoD sponsored cargo. The volume prescribes standard data elements, codes, formats, documents, forms, rules, methods, and procedures required by DoD components and other U.S. Government Agencies/civil authorities and users of the Canada-United States Integrated Lines of Communication (CANUS-ILOC) in the transportation and movement of material within and beyond the DTS.

Use of this volume requires simultaneous access to DoD 4500.32-R, Volumes I and II, and volume 1 of this manual. Volume 1 contains the full Table of Contents for the manual; the only listings of Acronyms and Abbreviations, Definitions, and References for the manual; instructions for acquiring access to the DLMS standards database; specific guidance that applies to all implementation conventions; and both functional and technical information that is relatively stable and applies to the DLMS as a whole.

The DTS consists of those common-user military and commercial assets, services and systems organic to, contracted by, or controlled by the DoD.

1.2 PROCEDURES

The procedures contained in this volume facilitate the electronic exchange of logistics data between DoD components and accommodate technological improvement. Tests of innovative procedures within selected segments of the DTS may be conducted with the approval of the Transportation PRC Chairperson and in coordination with the PRC. Users involved in the development and testing of advanced logistics systems will establish liaison with the Transportation PRC Chairperson and will provide the chairperson with monthly status reports. In addition, the test participants will provide the chairperson with a copy of the final test report and recommendations. Also, DoD component mobility plans will recognize the policies, procedures and documentation requirements set forth in this volume.

The documentation requirements of this volume are not classified unless the sponsoring DoD component assigns a security classification under DoD 5200.1-R; GSA will use ADMP 1025.2. When documentation is classified, the integrity of the classification is protected within the DTS. Classified cargo is protected using applicable regulations described in volume 1 references. When considering major modifications to existing or development of new transportation data/documentation and related information systems, it must be recognized that the movement of personnel and material is the prime consideration and necessary data transmittal should not be an impediment to that effort. For the near term, any effort to provide transportation data/documentation and related information systems with classification protection must be limited to minor modifications and altered procedures that remain within and can be accommodated by existing transportation systems. For the longer term, DoD component unique and DoD transportation systems undergoing development or enhancement must recognize the importance of security implications.

1.3 APPLICABILITY

This volume applies to all interfaces with the DTS and any intransit data reporting for both DTS and non-DTS actions. These interfaces include the Office of the Secretary of Defense,

Military Departments, Joint Staff, Unified and Specified commands, Defense Agencies, and Defense Organizations, USTRANSCOM and its TCCs, other activities/Agencies using the DTS (hereafter referred to collectively as DoD components) and, by agreement, to other organizations participating in the DLMS. In addition, the DoD components will ensure their mobility plans recognize and accommodate these provisions. All material transported during activation or exercise of the CANUS-ILOC will be documented in accordance with these procedures.

1.4 TRANSPORTATION PRC

The Transportation PRC is the forum through which the DoD components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of transportation requirements for the DLMS. The Transportation PRC Chairperson with the Transportation PRC representatives, is responsible for the contents of this volume of the DLMS. Representatives to the Transportation PRC are identified in appendix 1A of this volume. Refer to volume 1, chapter 1 for a discussion of the DLMS PRC functions and responsibilities.

1.5 EXCLUSIONS

There are no exclusions to the policies, procedures, and use of standard implementation conventions described in this volume.

Requests for deviations or exceptions to the policies, procedures, and use of standard implementation conventions as set forth in this volume must be processed through the DLMS Transportation PRC Chairperson. Specific instructions for submitting these requests are contained in volume 1, chapter 5, section 5.4.

1.6 RESPONSIBILITIES

In addition to the responsibilities described in volume 1, the following additional responsibilities are applicable to the application and use of this volume.

1.6.1 SPONSORING DOD COMPONENTS

Heads of DoD components will:

- Establish an ACA and provide the DLMS Transportation PRC Chairperson with complete identification and location data for the ACA along with air eligibility criteria, for inclusion in this volume. The ACA will clear all sponsoring DoD component airlift eligible cargo into the airlift system and provide consignment instructions when required.
- Develop instructions for theater clearance authority operation based on data input requirements and output products described in this volume.
- Advise USTRANSCOM and the overseas commands of anticipated workload surges that may result from political decisions, natural disasters, strikes, local or national regulatory actions, or other actions that may affect normal traffic flow.
- Advise shipping activities of the deferred air freight program, cargos selected for the program, and circumstances in which it may be used.

- Designate an ILCO with whom clearance authorities may coordinate on movements of FMS cargo in the DTS.

Each DoD component authorizing payment for the movement of material in the DTS will develop and maintain TACs to facilitate the billing and payment of transportation charges in an efficient and timely manner. In addition, the DoD components will monitor TAC applications by shippers to ensure compliance and resolve questionable, erroneous, or missing TAC applications within 5 working days of notification by USTRANSCOM or its TCCs that a TAC is questionable, erroneous, or missing.

1.6.2 U.S. TRANSPORTATION COMMAND

USTRANSCOM will:

- Exercise combatant command of the Military Traffic Management Command of the Department of the Army, the Military Sealift Command of the Department of the Navy, and the Air Mobility Command of the Department of the Air Force, in time of peace and war.
- Exercise combatant command of all transportation assets of the military Departments, except for Service-unique or theater-assigned transportation assets.
- Be the Department of Defense single manager for transportation, other than Service-unique or theater-assigned transportation assets.
- Have the authority to provide management support of Service-unique or theater-assigned transportation assets to the Secretaries of the Military Departments and the commanders of unified and specified commands.
- Submit as necessary from time to time to the Secretary of Defense, through the Chairman of the Joint Chiefs of Staff, the Under Secretary of Defense for Acquisition and Technology and such other department officials as may be appropriate, for approval any changes to transportation, fiscal, procurement or other Department of Defense policies.

USTRANSCOM or its designated TCC will perform after-the-fact analyses on a continuing basis of the origins, flow patterns, operational procedures and growth trends for each segment of the international movement of DoD cargo and prepare reports covering these analyses for submission to ADUSD(L/TP) at least semiannually. These reports will be accompanied by copies of the concurrences or comments of the DoD components.

1.6.3 THEATER COMMANDERS

Theater commanders will:

- Provide for inter/intratheater air and surface transportation and port operations, both organically and commercially. Establish air and water clearance authorities for those terminals under their cognizance with the sponsoring DoD component. In addition, they will provide the DLMS Transportation PRC Chairperson with complete identification and location data for each clearance authority for inclusion in this volume.

- Develop instructions for theater clearance authority operation based on data input requirements and output products described in this volume. Provide guidance on the use of deferred air freight service with AMC and the sponsoring DoD component shipper.
- Develop and maintain a SEAVAN monitoring system to provide management visibility of container movements from discharge to receipt and unstuffing by receiving activities and release of the SEAVAN to the carrier.
- Advise USTRANSCOM and the DoD components of anticipated workload surges resulting from political decisions, natural disasters, strikes, local or national regulatory actions, or other actions which may affect normal traffic flows.

1.6.4 JOINT CHIEFS OF STAFF

Determines priorities and allocations of lift when shipping requirements exceed lift capabilities. The DLMS Transportation PRC Chairperson provides technical assistance to the Joint Transportation Board during national emergencies and contingencies.

1.7 NONCOMPLIANCE

If reasonable attempts to obtain compliance with prescribed procedures or resolution of DLMS Transportation related problems are unsatisfactory, the activity having the problem will request assistance from their DLMS Transportation PRC representative. The request will include information and copies of all correspondence pertinent to the problem; including the transaction set number, the transaction number and the date of the transaction involved. The representative will take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the Transportation PRC Chairperson.

2 SHIPMENT REQUIREMENTS

2.1 GENERAL

This chapter provides procedures for planning, processing, and documenting shipments within the DTS. Always plan a shipment carefully to ensure effective and economical use of transportation resources. This planning also results in timely transportation response. While some shipments require different or more detailed data than others, the basic procedural steps are similar.

2.2 SHIPMENT PLANNING

Use the TS 858 IC - International Shipment Information (appendix 2A) to transmit information required for shipments within the DTS. The shipper prepares the transaction set for each TCN and shipment unit and forwards to either the CCP at time of shipment or the respective ACA or OCCA for submission to the POE according to time schedules indicated on figures 2-2 and 2-3, respectively.

2.2.1 CONSIGNEE

The consignee is the activity that requested or will ultimately receive the shipment. This activity is usually identified by an assigned DoDAAC or MAPAC (for FMS and MAP shipments). Use the clear-text name for those activities not assigned a DoDAAC. This information is contained in the N1 segment of the TS 858 IC - International Shipment Information.

2.2.2 TRANSPORTATION PRIORITY (TP)

The TP establishes the order of handling and the recommended method of material movement. The TP is based on UMMIPS (DoD 4140.1-R) and will be upgraded only consistent with the UMMIPS regulation or requisitioner requests a different TP. The UMMIPS priority designators and time standards apply to the shipment regardless of the direction of movement (see figure 2-1).

The Y7 segment of the TS 858 IC - International Shipment Information contains codes relating to specific priority conditions for transportation of shipments. The assignment of a transportation priority establishes the order of precedence for freight shipments moving in the DTS. These priorities are as follows:

- Expedited shipments. Assign TP-1 when the MRO contains an RDD entry of 999,N __, or E __.
- Priority shipments. Assign TP-2 when the MRO contains an RDD entry of 555, 777, or 444.
- Routine shipments. Assign TP-3 when an RDD is blank in the MRO.
- When the RDD entry indicates day-of-the-year, TP-1, TP-2 or TP-3 is assigned, as appropriate. Figure 2-1 contains the time standards applicable to each TP.

The TP for personal property shipments is based on the RDD established under the sponsoring DoD component policy (TP-3 is normally assigned). A higher priority (TP-2) may be designated by the sponsoring DoD component when operationally or economically beneficial or to avoid

hardship to Service member or his dependents. In all cases, the RDD field contains the actual date the shipment is required at the destination. Procedures for the use of deferred air freight (TP-4) will be maintained by the sponsoring DoD component guidance.

Nonappropriated fund shipments are normally assigned TP-3 and moved by surface means of transport. The sponsoring DoD component may assign TP-2 and authorize air movement for:

- Seasonal items delayed by late availability from CONUS vendors.
- Items that require air transport for control purposes.
- Necessary health items in critically low stock.
- Shipments caused by equipment or facility failures that threaten the operation of the nonappropriated fund activity.

Shipments of GSA-managed sealants and adhesives, selected medical items, and items with limited remaining shelf life, when designated by the sponsoring DoD component shipper, are authorized expedited transportation (TP-2) by air movement. When expedited transportation is authorized, a day-of-the-year or "777" must be entered in the RDD.

Bulk mail shipped through the DTS is assigned TP-2 or TP-3.

2.2.3 REQUIRED DELIVERY DATE (RDD)

The RDD is a calendar date which specifies the date the material is required by the requisitioner. An RDD is assigned by the requisitioner only if the material must be delivered on a date other than the delivery date indicated by the UMMIPS time standard. Refer to volume 2, chapter 5 for delivery date structuring and processing.

2.2.4 NATIONAL STOCK NUMBER (NSN)

The NSN data is required for all shipments for purposes of apportioning lift, tracking, and monitoring cargo during peacetime, contingencies, and mobilizations. The NSN data is determined from available requisition source data or unit equipment records. The NSN data will be provided for each item as described in the N9 segment of the TS 858 IC - International Shipment Information.

2.2.5 PROJECT CODE

The project code is used by the requisitioner to identify requisitions for special programs, exercises, projects, operations, and other purposes such as the accumulation of performance and cost data. The project code is perpetuated on all applicable transportation documentation but is not directly related to the transportation priority. See volume 2, chapter 5, appendix 5A.

2.2.6 SHIPMENT IDENTIFICATION NUMBER

The Transportation Control Number (TCN) is the single most important lead item/data element to identify shipments filling requisitions either via organic lift or commercial carriers, new procurement and depot stock. The shipper assigns a TCN and detailed instructions for construction is contained in appendix 2B.

2.2.6.1 THE SHIPMENT UNIT

The shipment unit is the basic entity for marking, documenting, clearing, and controlling a shipment. It is a key element on which later transportation decisions are made. By definition, a shipment unit is:

- A single line item of supply destined to one consignee.
- Two or more compatible line items having the same consignee and destination, commodity category, and which are shipped together either:
 - In the same crate, package, pallet, or other consolidation.
 - In the same railcar, truckload, MILVAN, SEAVAN, or other type conveyance.
 - Fastened together into a single piece or as a set or assembly.

The shipper is required to aggregate shipment units into pallet, MILVAN, or SEAVAN loads for delivery to the same consignee within established UMMIPS time standards to the maximum extent possible, except:

- Shipment units destined to the same CCP, POE, or breakbulk point need not be destined to the same consignee.
- SEAVANs may be stuffed for more than one consignee when stop-off services are used.
- Shipment units of ammunition, explosives, and other hazardous materials may be loaded into one conveyance if not prohibited by other publications.

Certain line items and commodities will not be consolidated into a shipment unit with other line items or commodities. This does not preclude the aggregation of shipment units, as described above, whenever possible to minimize transportation costs. The following items and commodities will generally be documented and controlled as separate shipment units:

- Line items subject to significantly different freight rates unless consolidation would result in lower overall costs to the destination.
- Line items of dangerous or hazardous materials. Except for ammunition, explosives, and radioactive or magnetic material, consolidation is permitted if not prohibited by other publications.
- Line items with different project codes, unless consigned to the same ultimate consignee and shipped on the same day.
- Line items for expedited (TP-1) shipments, unless consigned to the same ultimate consignee and shipped on the same cycle.
- Line items filling NMCS requisitions, unless consigned to the same ultimate consignee and shipped on the same day.
- Line items with different transportation priorities, unless permitted by DoD component policy and consistent with sound traffic management.

- FMS items except those with the same requisitioner address and FMS case number.
- Items or commodities that are not compatible with other items. Such incompatibility may be due to:
 - Excess size or dimensions that require special handling.
 - Uneconomical consolidation costs; such as for packing, handling, and loading.
 - Items with different perishable or dissimilar keeping qualities.
 - Possible contamination of subsistence items.

2.2.6.2 ADDITIONAL REQUIRED SHIPMENT DATA

When required to successfully process the shipment, additional shipment data will be provided by the shipper.

2.2.6.2.1 COMMODITY DESCRIPTION

The shipper determines applicable commodity description(s) for each shipment, grouping those with similar characteristics for purposes of manifesting, billing, cost accounting, contractor payment and special handling. For international air and water shipments, the commodity code structures contain varying degrees of specificity and include any special handling requirement(s). Shipments between points in CONUS and CONUS and Hawaii or Guam use NMFC or UFC commodity descriptions. Shipment units containing multiple commodities are described using the NMFC or UFC description of the highest rated article. An abbreviated description similar to that used in the Freight Classification Guide System is acceptable. Commodity description is contained in the L5 segment of the applicable transportation transaction.

2.2.6.2.2 PIECES, WEIGHT, AND CUBE

Pieces, weight and cube data is determined from the item(s) being packaged and their shipping configuration. For example, six cartons not further unitized are considered six pieces but six cartons banded/fastened together on a pallet are considered one piece. The gross weight or shipping weight is based on the weight of the item and its protective packaging, including the outer package. The cube of an item is based on its length, width and height in its maximum reduced shipping configuration. Pieces, weight and cube data is contained in the LO segment of the applicable transportation transaction.

2.2.6.3 ADDITIONAL SPECIAL DATA REQUIREMENTS

In addition to general shipment information described above, the shipper also determines limited special data for certain specific commodities or types of shipments. The following subsections describe various special data requirements.

2.2.6.3.1 HAZARDOUS MATERIAL SHIPMENTS

Use the LH segment to process information concerning hazardous material.

If the shipment consists of Government-owned military hazardous material, including ammunition and explosives, that was packaged prior to 1 JAN 90 and remains in its original packaging, the following statement must appear in the documentation accompanying the shipment and in the TS 858 IC - International Shipment Information:

"THE HAZARDOUS MATERIAL DESCRIBED IN THIS DOCUMENT IS GOVERNMENT OWNED FOR MILITARY USE AND WAS PACKAGED PRIOR TO 1 JAN 90."

If the hazardous material was packaged after 1 JAN 90 and/or cannot be considered Government-owned for military use, compliance with the POP requirements of the IMDGC for ocean cargo, or ICAO technical instructions for air cargo, is mandatory. Any and all costs incurred by AMC, MSC, or MTMC to bring noncomplying cargo into compliance with POP standards will be borne by the shipper.

If the hazardous material is subject to POP requirements, and CAA waivers have been obtained, the CAA number must be reflected on the accompanying shipping documentation and the LH segment.

Provide the following information, when required, for hazardous material processing:

- The proper shipping name including the RQ (if appropriate), hazard classification including the compatibility group for ammunition and explosives, and DOT label requirements as prescribed in 49 CFR. The DoD DMIS may be used to assist in determining the proper shipping name and certain additional shipping data. Proper shipping name is contained in the LH segment of the applicable EDI transportation transaction.
- The NEW for Class 1.1, 1.2, 1.3, and 1.4 explosives.
- The actual flashpoint for flammable liquids, usually from the container markings prescribed by MIL-STD-129. Flashpoint is contained in the LH segment of the applicable EDI transportation transaction.
- The DoDIC for ammunition and explosives.
- The NSN whenever possible.
- The round/component count for each unit of issue and, by extension, the total round/component count for the shipment unit. Round/component count is contained in the MEA segment of the applicable EDI transportation transaction.
- Required data for radioactive material as prescribed by 49 CFR.
- The UN/NA or ID number, class number, and, if applicable, compatibility group code for the IMDGC for water shipments.
- The load/storage group from AFJMAN 24-204.
- The lot number for all ammunition shipments.

2.2.6.3.2 GOVERNMENT-OWNED VEHICLES

The shipper provides model, nomenclature and serial number of Government vehicle, trailer, wheeled gun or aircraft shipments. Additionally, if shipments are being made to Central or South America, the make and year of the vehicle must also be provided.

2.2.6.3.3 PERSONAL PROPERTY

For shipments of unaccompanied baggage, household goods, and/or POVs, the shipper identifies owner specific information, such as owner's name, grade, address; shipment weight; household goods carrier; POV year, make, color and license plate number and issuing state.

2.2.6.3.4 SEAVAN/MILVAN SHIPMENTS

The following specific information must be provided for those shipments loaded into containers (SEAVANS or MILVANS):

- The container number, size of container in feet, cubic capacity, and container ownership for the container used as well as for the container that was ordered.
- For reefer containers, the temperature set in degree Fahrenheit as either a specific temperature or temperature range at which the cargo must be maintained.
- When the container is equipped with a mechanical bracing system, the number of beam assemblies in the container must be specified.

2.2.6.3.5 SHIPMENTS TO TURKEY

DoD material (arms, ammunition, generators (60KW and above), vehicles, and nonregistered equipment and supplies) consigned for U.S. Forces in Turkey require prior clearance from the Turkish General Staff. The Turkish General Staff assigns a TDA number to each shipment cleared for import into Turkey via message request submitted by the shipper. Refer to appendix 2C for further information.

2.2.6.3.6 SECURITY ASSISTANCE SHIPMENTS

Refer to volume 2, chapter 5, appendix 5F for security assistance processing and procedures.

2.2.7 SHIPMENT CONSOLIDATION AND CONTAINERIZATION

2.2.7.1 CCP OPERATIONS

The CCPs have evolved to make more complete use of SEAVANS, MILVANS, and 463L pallets and to gain the benefits associated with reduced cargo handling. Most shippers do not generate full container or air pallet loads of cargo to recipients, therefore the CCP provides a means for consolidating shipments from multiple shippers. These combined shipments are routed directly to a single consignee or, through the use of stop-offs or breakbulk points, to multiple consignees.

The Services and DLA have established CCPs throughout CONUS to consolidate cargo for onward movement by SEAVAN, MILVAN, or 463L pallet. Additionally, certain military controlled and operated POEs perform "CCP-like" operations for the multitude of loose shipments arriving at the port.

The CCP verifies shipment receipt by comparing transshipment cargo and carrier documentation to the TS 858 IC - International Shipment Information at time of shipment arrival. The CCP advises the shipper in the event any shipment(s) has not been received within 5 days following the ETA.

When a shipment discrepancy (over, short, or damage) is discovered, the CCP documents the discrepancy according to AR 55-38, et al. and reports the inadequacies as prescribed in volume 2, chapter 18 of this manual. Prior to forwarding or disposing of damaged shipments, the CCP coordinates with the shipper, receiver, and/or sponsoring Service to ensure proper disposition of the material. Reconditioning, remarking, and repacking are services also provided by the CCP to ensure safe onward movement of shipments. If the shipment was not prepared for movement according to military standards by the origin shipper, the CCP obtains either a fund citation to correct the deficiency or disposal instructions from the sponsoring Service. The CCP reports inadequate shipment preparation according to the AR 55-38 and documents in accordance with volume 2, chapter 18 of this manual.

2.2.7.2 LOADING CONTAINERS

Shipment unit integrity is maintained when loading containers. To meet delivery requirements at the lowest overall cost, containers are usually loaded in the following order:

- Full container loads for a single consignee.
- Container loads for delivery to multiple consignees via stop-off service.
- Container loads for delivery to multiple consignee via breakbulk points, including PODs.

Prior to sealing the container, the shipper places a detailed load list in a waterproof envelope labeled "LOAD LIST." The load list envelope is securely attached to the inside of the container loading door. Both consolidated and partial load lists are made when the container is loaded for stop-off deliveries.

The movement of loaded containers to the POE is coordinated directly with the ocean carrier or its agent as indicated in the ETR instructions. Upon release of the container for delivery to the POE, the shipper transmits TS 858 IC - International Shipment Information and TS 856 IC - Intransit Data Report (appendix 2D).

2.2.7.3 OCEAN SHIPMENT BOOKING INFORMATION

The DLA operates CCPs that consolidate and containerize DoD cargo for onward movement OCONUS. Additionally, certain CONUS ports with USTRANSCOM presence perform same operations for shipments bypassing the CCPs.

Container requirements for each destination are stated simply by number and size, i.e., large or small. The container requirements are submitted to the OCCA booking office which books the total number of containers required with the appropriate ocean carrier(s). Once the bookings are secured, the OCCA booking office furnishes the shipper with a block of TCNs, one for each container booked.

2.2.7.4 DATA REQUIREMENTS FOR CONTAINER SHIPMENT/BREAKBULK CARGO

Container shipments. The shipper or CCP provides the following information when booking containerized cargo:

- The cargo category, i.e., general cargo, reefer cargo, mail, etc.
- The size of the container, generally 20 to 40 feet. If any size container is acceptable, size need not be specified. Requests for containers of a specific size are only made when required by the characteristics of the cargo or other identifiable reasons. The booking office accepts requirements for specific length containers, but not requirements for a specific carrier unless the named carrier is cost favorable or use of the carrier fully explained and justified by the shipper.
- The container consignee.
- Cargo priorities, including required delivery and/or availability dates.
- The POE and POD and for cargo moving under MSC container agreement rates, the inland origin and destination points.
- The container loading location and the date the cargo will be available for loading.
- For MAP and other aid cargo, whether or not ocean carrier loading and unloading costs are the responsibility of the DoD or the recipient government.

The CCP coordinates directly with the ocean carrier or its agent for spotting of empty containers. As containers are required, the shipper or CCP assigns an ETR and a TCN to each specific container.

Breakbulk cargo. The shipper provides the following information:

- The measurement tons of cargo by category, i.e., general cargo, POVs, ammunition, hazardous cargo, etc.
- The loading POE and unloading POD.
- The consignee(s) and date cargo will be available for loading.
- Cargo priorities, including required delivery and/or availability dates. Delivery time from POD to the ultimate consignee is also considered. If there is a shortage of a specific type of space for cargo requiring special handling and stowage, the OCCA coordinates the cargo's relative priorities with appropriate DoD component or theater representative.
- For MAP and other aid cargo, whether or not ocean carrier loading and unloading costs are the responsibility of the DoD or the recipient government.

2.2.8 SHIPMENT CLEARANCE

Prior to making the shipment, the shipper offers all cargo, including personal property, except code J and POVs, entering the DTS for clearance. For most shipments, the clearance process commences upon submission of the TS 858 IC - International Shipment Information by the shipper to the appropriate clearance authority contained in DoD 4500.32-R, Volume I, appendix J. The contract administration office or purchasing office arranges for clearance and appropriate documentation of all vendor shipments in the same manner as a shipper. An exception to this process is that the shipper must request an ETR from the OCCA for all RU and certain LRU shipments identified in DoD 4500.32-R, Volume I, appendix J. Detailed procedures for clearing air and ocean shipments are contained in the following subsections.

As exceptions or additions to the general procedures detailed below, shippers and clearance authorities may develop local agreements to satisfy clearance and documentation requirements. These local agreements are limited to regular cargo movements through normal POE and POD combinations as listed in the agreement, DoD 4500.32-R, Volume I, appendix H, or the AMC sequence listing for channel traffic. The local agreements must result in the documentation required by this manual. These local agreements must also be approved by the DoD component headquarters of both the shipper and the clearance authority.

2.2.8.1 AIR CLEARANCE PROCEDURES

The shipper must clear all cargo shipped by government controlled airlift systems. There is no requirement for an ETR in the airlift systems. The shipper clears an air shipment by sending the TS 858 IC - International Shipment Information to the ACA within the time limits shown in figure 2-2. The shipper obtains clearance from point of origin to destination for all shipments moving from one theater to another. The clearance is obtained from the origin theater ACA. The ACAs are designated by the DoD components. Except for shipments by deferred air freight (TP-4), an air shipment is considered cleared if the ACA has not challenged it by the hour/day indicated on the TS 858 IC - International Shipment Information. Challenges by the ACA are issued by telephone or message and may be made at anytime prior to the hour/day shipped indicated on the TS 858 IC - International Shipment Information. When clearance is provided, the ACA transmits the TS 858 IC - International Shipment Information to the POE prior to arrival of the cargo.

For shipments moved by deferred air freight service, the shipper will submit the TS 858 IC - International Shipment Information to the ACA in the same manner as for any air shipment. Unlike other air shipments, the shipper does not release a deferred air freight shipment until approved by the ACA. When the ACA rejects a shipment, the shipper transmits the TS 858 IC - International Shipment Information to the OCCA requesting transportation by ocean.

A procedure whereby specifically identified cargo in the airlift system may gain movement precedence over other priority cargo of the same sponsoring DoD component is called Green Sheet. Green Sheet is not a priority, but is designed to override priorities when expedited movement of a specific shipment is required in the name of "National Interest" and is certified operationally necessary by the sponsoring DoD component. The use of this procedure must be controlled and monitored to preclude adverse impact on the movement of cargo sponsored by other DoD components. Green Sheet is not approved if other procedures, including space block, will meet the movement requirement. When appropriate, the shipper submits requests for Green Sheet action to the sponsoring DoD component ACA.

The PCCs and the ARFCOs provide the required shipment information to the ACA in accordance with locally developed procedures. The information is contained in the TS 858 IC - International Shipment Information or other format as may be appropriate.

2.2.8.2 OCEAN CLEARANCE PROCEDURES

There are two procedures for clearing ocean export cargo, one for RU shipments and one for LRU shipments. Unless specifically excluded, these procedures apply to all ocean shipments in the DTS, including personal property other than POVs, vendor shipments, and mail. (Additional information for clearance of personal property are contained in DoD 4500.34-R.) The primary difference between the two shipment clearance procedures is the ETR. When clearance is provided, the OCCA transmits the TS 858 IC - International Shipment Information to the POE prior to arrival of the cargo. The POE advises the OCCA of any ocean shipments not received within 5 days of the ETA.

2.2.8.2.1 RU PROCEDURES

An RU is a shipment unit of a specific commodity, weight, size or mode for which a shipper must request an ETR from the OCCA prior to shipment. CONUS RUs are defined and include submission procedures in AR 55-355, et al. Similar information for overseas RUs is contained in applicable theater directives. RU shipments are characterized by one or more of the following:

- Weighs 10,000 pounds or more.
- Is classified, explosive, poisonous, or requires protective or security measures.
- Occupies or is tendered as a full carload or truckload.
- Moves to the POE by driveway method.

The shipper must request an ETR from the OCCA prior to making an RU shipment. The OCCA furnishes an ETR within 48 hours for expedited (TP-1 and TP-2) shipments and within 3 working days for routine (TP-3) shipments. If the OCCA must secure a firm booking prior to issuing the ETR, the shipper is notified within 48 consecutive hours from receipt of request of the estimated date for issuance of the ETR.

After receiving the ETR, the shipper must update the TS 858 IC - International Shipment Information with any additional information.

2.2.8.2.2 LRU PROCEDURES

An LRU shipment is any shipment unit that is not an RU as described in subsection 2.2.8.2.1, above. The shipper clears LRU and RU ocean shipments for which an ETR has been received by transmitting the TS 858 IC - International Shipment Information to the OCCA in accordance with the timetable shown in figure 2-3. A complete TS 858 IC - International Shipment Information for each SEAVAN including content data must be submitted to the OCCA.

LRU and RU shipments for which an ETR has been received are considered cleared if they have not been challenged by the OCCA prior to 1600 hours local time on the day before the day shipped entry indicated on the TS 858 IC - International Shipment Information. If the shipment is challenged, the shipper follows the instructions provided by the OCCA. The shipper will immediately contact the OCCA if unable to follow the challenge instructions.

2.3 SHIPMENT DOCUMENTATION

The following sections describe the transaction sets shippers are required to submit to document and control the movement of cargo throughout the DTS. For the purposes of this volume, the term "shipper" includes transportation officers at depots, retail activities, CCPs, POEs, PODs, breakbulk points, and any other location where shipment documentation is created.

2.3.1 SHIPMENT INFORMATION

The TS 858 IC - International Shipment Information provides a method of documenting, controlling, and monitoring cargo moving through the DTS. The transaction set must be transmitted to the appropriate ACA, OCCA, or CCP and the Defense Automated Addressing System (DAAS). See DoD 4500.32-R, Volume I, appendix J for the current list of CONUS and overseas ACAs and OCCAs.

2.3.2 DETAILED LOAD LIST

RESERVED

2.3.3 INTRANSIT DATA

The TS 856 IC - Intransit Data Report is used by shippers and transshippers to detail and communicate contents of a shipment(s) to one or more consignees. This transaction set, prepared by the shipper and transmitted to the DAASC and the next node of the shipments route of movement, provides a positive method of reporting actual data and time of shipment.

The TS 861 IC - Shipment Receipt Information (appendix 2E) is used by transshippers and consignees to report the receipt of shipment units within the DTS. This transaction set, prepared by the receiving activity and transmitted to the DAASC, provides a positive method of reporting shipment receipt.

2.4 ADDITIONAL DOCUMENTATION REQUIREMENTS

In addition to the above transaction sets, the shipper may be required to prepare the following documentation. Some of the documents described below are required on every shipment while others are required on a commodity and/or type shipment basis.

2.4.1 ADDRESS MARKINGS

The shipper applies address markings to each piece of the shipment unit. The DD Form 1387, Military Shipment Label, 1986 edition, is used for address marking on all shipment units of DoD cargo. The form is completed using automated or manual capabilities. Bar coded entries for TCN, consignee DoDAAC, and piece number are mandatory. Labels prepared by automated means must be readable by humans and electronic devices. If the shipping container does not lend itself to application of the label, or the label covers or interferes with other required markings, the label is attached to a general purpose tag or wooden placard. The tag/placard is tied, wired, or otherwise fastened to the shipment unit or movement conveyance (SEAVAN or air pallet). A vendor or contractor may apply address markings by silk screen, stencil, or alternate labels provided the procurement costs are not increased and the markings conform with MIL-STD-129. Substitute labels must contain the same data as the DD Form 1387, Military Shipment Label and be approved by the CAO.

Detailed procedures for applying shipment markings are contained in MIL-STD-129. Personal property shipments are marked according to MIL-STD-212 and hazardous materials according to Title 49 and other appropriate publications. The outside containers of classified or protected (sensitive) shipments are marked as specified in MIL-STD-129 and DoD component publications, and does not identify the classified or protected nature of the material being shipped.

2.4.2 SPECIAL HANDLING INSTRUCTIONS

The shipper also completes the DD Form 1387-2, Special Handling Data/Certification, for shipments of hazardous material and classified or protected material moving by military controlled aircraft. The form indicates material characteristics, precautionary measures, handling instructions, and any other information necessary for safe and proper cargo handling. Detailed instructions for completing and distributing the form are contained in AFJMAN 24-204, et. al. Only authorized personnel trained in accordance with the joint publication are authorized to certify hazardous cargo for movement by military aircraft. Under normal circumstances the shipper types the form, but during emergencies, clear, legible handwritten entries are acceptable.

Once prepared, the DD Form 1387-2, Special Handling Data/Certification, is distributed as follows:

- When shipping unclassified nonhazardous material, the original signed form is attached to the number one package of the shipment. Three additional signed copies are submitted to the origin air terminal in a waterproof envelope and attached to the number one package in the shipment. An additional copy of the form which need not be signed is attached to each package in the shipment.
- When shipments are classified but do not contain hazardous material, the shipper enters the degree of protection required in the supplemental information block. The gross weight, TCN, and destination DoDAAC entries are all that is required to be completed. One copy of the form is attached to the number one package and three additional copies of the form are sent to the origin air terminal in a waterproof envelope affixed to the number one package.

The special handling instructions are also identified in the H3 segment of the TS 858 IC - International Shipment Information.

2.4.3 POV SHIPMENTS

When POVs are delivered to the POE, the POE inspects the POV and prepares DD Form 788, Private Vehicle Shipping Document for Automobile, DD Form 788-1, Private Vehicle Shipping Document for Van, or DD Form 788-2, Private Vehicle Shipping Document for Motorcycle, as appropriate, to establish a record of the condition, customs and EPA qualifications, and complete ownership identification data for POVs shipped in the DTS.

2.4.4 OVER, SHORT, OR DAMAGED SHIPMENTS

Refer to volume 2, chapter 18 of this manual for instructions and procedures for handling and documenting overages, shortages, and damaged shipments within the DTS.

2.4.5 SHIPMENT RECORDS

After completing a shipment, the shipper maintains records detailing the actions under taken. Various publications referenced in volume 1 and certain DoD component publications detail the length of time and method for keeping records.

Time Segment	Time Standards in Calendar Days for UMMIPS Priority Designators (1)

Figure 2-1

EXPLANATION OF NOTES:

N/A = Not Applicable

Required Delivery Date (RDD):

- 999 Indicates expedited handling required for NMCS overseas customers or CONUS customers deploying overseas within 30 days.
- N__ Indicates expedited handling due to NMCS requirement CONUS customer.
- E__ Indicates expedited handling due to anticipated NMCS requirement CONUS customer.
- 555 Indicates exception to mass requisition cancellation, expedited handling required.
- 777 Indicates expedited transportation required for other than the above reasons.

- 444 Indicates handling service for customers collected with the storage activity or for locally negotiated arrangements.
- Specific date indicates handling to meet that date of delivery.
 - Blank RDD indicates routine handling.

(1) Pipeline standards for materiel delivery exclude weekends and holidays except for segments D and E for requirements with RDDs 999, N __, or E __. Storage activities and transportation managers may combine the times for segments D and E as long as the combined time is not exceeded. The pipeline time standards are service level targets; they shall be met or improved upon whenever physically and economically feasible. Individual segment standards should not be considered inviolate when subsequent savings in time and improved service can be achieved.

(2) Areas:

1. To Alaska, Hawaii, Guam, Caribbean, or Central America.
2. To United Kingdom and northern Europe.
3. To Japan, Okinawa, Korea, and western Mediterranean.
4. Hard lift area - all other destinations not included in 1-3 (e.g., South America, eastern Mediterranean, North Atlantic, Africa, Diego Garcia, etc.) as determined by USTRANSCOM. Current information on air and surface hard lift areas is available from the Service clearance authorities.

(3) For manually submitted requisitions or requisitions requiring manual review, 1 day for PDs 01-08 and 3 days for PDs 09-15.

(4) Combine segments E and F as a single segment when a SEAVAN is loaded at source or when cargo is moved breakbulk to the POD.

(5) Measurement or intra/inter-Service lateral support or redistribution begins at segment C or segment D (installation level).

AIR CLEARANCE DATA SUBMISSION TIME STANDARDS	
When the shipper makes an:	The shipper transmits TS 858 IC - International Shipment Information to the ACA:
Expedite TP-1 shipment	Not later than 2 hours prior to release to the carrier.
Expedite TP-2 shipment	Not later than 6 hours prior to release to the carrier
All other shipments	Not later than 14 hours prior to release to the carrier

Figure 2-2

OCEAN CLEARANCE DATA SUBMISSION TIME STANDARDS		
When the shipper makes an:	When transit time to the POE is:	The shipper sends data to the OCCA:
RU shipment by SEAVAN	24 hours or less	After receiving the ETR and at least 12 hours prior to shipment
	Over 24 hours	Not later than actual time of shipment
All other RU shipments	24 hours or less	At least 18 hours prior to shipment
	Over 24 hours	24 hours prior to arrival at POE
LRU shipments restricted by DoD 4500.32-R, app. H	24 hours or less	After receiving the ETR and at least 18 hours prior to shipment
	Over 24 hours	After receipt of ETR but at least 24 hours prior to shipment
All other LRU shipments	24 hours or less	At least 18 hours prior to shipment
	Over 24 hours	At least 24 hours prior to shipment

Figure 2-3

APPENDIX 2A

**TRANSACTION SET 858 IMPLEMENTATION CONVENTION
INTERNATIONAL SHIPMENT INFORMATION**

858 Shipment Information

This Draft Standard for Trial Use contains the format and establishes the data contents of the Shipment Information Transaction Set (858) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide the sender with the capability to transmit detailed bill-of-lading, rating, and/or scheduling information pertinent to a shipment.

Implementation Note

Organizations use this transaction set to transmit information required for shipments within the DTS.

NOTES/COMMENTS:

- 1/030** BX05 contains the SCAC of the original roadhaul carrier receiving the shipment.
- 2/180** If the hazardous endorsement (LH204) is "NONE", then use of LH204 is mandatory. However, the receiver must consider it to be blanks when printing a paper document.
- 2/210** All receivers of the EDI transactions covering empty tank cars which last contained hazardous commodities must be able to add the constant words: RESIDUE: LAST CONTAINED ahead of the contents of LHE01 and add the constant: RESIDUE following the contents of the LHE02 when printing paper documents.
- 2/220** When used in the hazardous material loop, the segment will identify the various certification, exemption or shipper-related numbers that relate to the specific line item of the shipment that are in addition to the UN/UA number reference in the LH1 segment.

Segment: **ST** Transaction Set Header
Level: Header
Loop: ____
Mandatory **Usage:** Mandatory
Max Use: 1
Purpose: To indicate the start of a transaction set and to assign a control number
Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 858 X12.18 Shipment Information	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: **BX** General Shipment Information
Level: Header
Loop: ____
Usage: Mandatory
Max Use: 1
Purpose: To transmit identification numbers and other basic shipment data

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BX01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original Code Value Implementation Note: Use to identify an actual shipment. 01 Cancellation 04 Change 14 Advance Notification Code Value Implementation Note: Use to provide data for advance planning or to request advance clearance. 77 Simulation Exercise Code Value Implementation Note: Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.	M ID 2/2
Mandatory	BX02	91	Transportation Method/Type Code Code specifying the method or type of transportation for the shipment. Implementation Note: Use to indicate the method of shipment within the DTS. (See mode of shipment conversion table in volume 1, chapter 10.) A Air AR Armed Forces Courier Service (ARFCOS) ED European or Pacific Distribution System O Containerized Ocean Q Conventional Ocean Y Military Intratheater Airlift Service	M ID 1/2
Mandatory	BX03	146	Shipment Method of Payment Code identifying payment terms for transportation charges. Implementation Note: Always cite TP. TP Third Party Pay	M ID 2/2

Optional	BX04	145	Shipment Identification Number Identification number assigned to the shipment by the shipper that uniquely identifies the shipment from origin to ultimate destination and is not subject to modification. (Does not contain blanks or special characters.)	O	AN	1/30
Implementation Note: Use the TCN for the highest level of consolidation. For single shipment units, use the shipment unit TCN. For consolidated shipment units, use the TCN for the SEAVAN, MILVAN, RORO trailer, pallet, etc.						
Optional	BX05	140	Standard Carrier Alpha Code Standard Carrier Alpha Code	O	ID	2/4
Implementation Note: Identify the SCAC for the mode of shipment used to move the shipment unit to the air or water POE. If the shipment unit originates at the POE, use AMC for airlift or MSC for searlift.						
Not Used	BX06	188	Weight Unit Code	O	ID	1/1
Optional	BX07	147	Shipment Qualifier Code defining relationship of this shipment with respect to other shipments given to the carrier at the same time. B Bill of Lading for Individual Shipment Code Value Implementation Note: Use to indicate a single shipment unit. C Consolidated Shipment Code Value Implementation Note: Use when shipment is for multiple consignees via a breakbulk point for distribution to the ultimate consignees. D Sub for Distribution Code Value Implementation Note: Use when shipment is for multiple consignees via a centralized receiving point for distribution to the ultimate consignees. F Stop-off Shipment Code Value Implementation Note: Use to indicate that the shipment contains multiple consignees via stopoffs. Use the number of iterations of the 1/S5/450 loop to determine the number of stopoffs and iterations of the number of 1/N9/490 loops with code CN to identify the number of consignees.	O	ID	1/1
Not Used	BX08	226	Section Seven Code	O	ID	1/1
Optional	BX09	195	Capacity Load Code Code specifying type of capacity load. Implementation Note: Use only for SEAVANS loaded to capacity. Use to identify the type of full capacity. C Full Cubic Capacity F Full Capacity V Full Visible Capacity	O	ID	1/1
Not Used	BX10	160	Status Report Request Code	O	ID	1/1
Not Used	BX11	501	Customs Documentation Handling Code	O	ID	2/2
Not Used	BX12	199	Confidential Billing Request Code	O	ID	1/1
Not Used	BX13	714	Goods and Services Tax Reason Code	O	ID	1/1

O

ID

2/2

Segment: N9 Reference Number
Level: Header
Loop: ____
Usage: Optional
Max Use: 30
Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier
Syntax: 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.
Semantic: N906 reflects the time zone which the time reflects.
Implementation Note:
Use to cross reference other reference numbers related to the same shipment unit. Repeat this segment, as needed, up to 30 times.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N901	128	Reference Number Qualifier Code qualifying the Reference Number. BL Government Bill of Lading Code Value Implementation Note: Use to identify the GBL moving the shipment unit to or from the port. BM Bill of Lading Number Code Value Implementation Note: Use to identify the CBL moving the shipment unit to or from the port. BN Booking Number Code Value Implementation Note: Use to identify the booking number assigned to the shipment unit.	M	ID	2/2
Required	N902	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369	Free-form Description	C	AN	1/45
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Optional **Segment:** Y7 Priority
 Level: Header
 Loop: ____
 Usage: Optional
 Max Use: 1
 Purpose: To assign a priority to a booking which would increase the possibility that this cargo would be booked on said voyage and not be shut out
 Syntax: P0203 — If either Y702 or Y703 is present, then the other is required.
 Semantic: Y705 is the date specified by the shipper indicating when the shipment is required at the consignee's location.

Implementation Note:

Use Y701 and/or Y705 for expedited and priority shipments. Move the shipment as a routine surface shipment if not using Y701 and/or Y705.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	Y701	467	Priority Number indicating importance.	O	N0	1/1
Implementation Note:						
<i>Use to indicate the MILSTAMP transportation priority code.</i>						
Not Used	Y702	470	Priority Code	C	N0	1/1
Not Used	Y703	471	Priority Code Qualifier	C	AN	1/1
Not Used	Y704	468	Port Call File Number	O	N0	4/4
Optional	Y705	373	Date Date (YYMMDD).	O	DT	6/6

Implementation Note:

Use to indicate the required delivery date.

Required

Segment: **G62** Date/Time

Level: Header

Loop: _____

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R0103 — At least one of G6201 or G6203 is required.

2. P0102 — If either G6201 or G6202 is present, then the other is required.

3. P0304 — If either G6203 or G6204 is present, then the other is required.

Implementation Note:

Use multiple repetitions, as needed, to define the unique associated data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES			
Conditional	G6201	432	Date Qualifier	C	ID	2/2
			Code specifying type of date.			
			11 Shipped on This Date			
			17 Estimated Delivery Date			
			BD Required By			
			Code Value Implementation Note:			
			Must use to indicate the earliest required delivery date associated with any shipment unit in the shipment.			
Conditional	G6202	373	Date	C	DT	6/6
			Date (YYMMDD).			
Conditional	G6203	176	Time Qualifier	C	ID	1/2
			Code specifying the reported time.			
			Implementation Note:			
			Use in connection with air shipments only.			
			A Actual Departure Time			
			E Estimated Arrival Time			
Conditional	G6204	337	Time	C	TM	4/8
			Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)			
			Implementation Note:			
			Express time in a four-position HHMM format.			

Optional	G6205	623	Time Code	O	ID	2/2
Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a + or - and an indication in hours in relation to Universal Time Coordinate (UTC) time. Since + is a restricted character, + and - are substituted by P and M in the codes that follow.						
GM Greenwich Mean Time						
Code Value Implementation Note:						
<i>Use for air shipments.</i>						
LT Local Time						
Not Used	G6206	624	Century	O	NO	2/2

Optional

Segment: R1 Route Information (Air)

Level: Header

Loop: _____

Usage: Optional

Max Use: 1

Purpose: To specify airline and airport routing sequences

- Syntax:**
1. P0607 — If either R106 or R107 is present, then the other is required.
 2. P0809 — If either R108 or R109 is present, then the other is required.
 3. P1011 — If either R110 or R111 is present, then the other is required.
 4. P1213 — If either R112 or R113 is present, then the other is required.

Implementation Note:

Use for air shipments only. Use data elements R106 through R113 only when additional air carriers and/or air terminals must be identified.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Conditional	R113	5	Airport Code Code (IATA) for airport.	C	ID	3/5

Segment: R2 Route Information
Level: Header
Loop: _____
Usage: Optional
Max Use: 13
Purpose: To specify carrier and routing sequences and details
Semantic: 1. R203 is the station or city name at which carriers interchange shipments.
2. R210 is the Billing Date.

Implementation Note:

Use one repetition as needed to identify carrier information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	R201	140	Standard Carrier Alpha Code Standard Carrier Alpha Code	M	ID	2/4
	Implementation Note: Use to identify the ocean carrier. Identify the carrier SCAC or cite MSC for Military Sealift Command.					
Mandatory	R202	133	Routing Sequence Code Code describing the relationship of a carrier to a specific shipment movement. B Origin/Delivery Carrier (Any Mode)	M	ID	1/2
	Code Value Implementation Note: Use to identify the ocean carrier.					
Not Used	R203	19	City Name	O	AN	2/30

Not Used	R213	742	Route Description	O	AN	1/35

Optional Segment: **R4 Port**
Level: Header
Loop: ____
Usage: Optional
Max Use: 5
Purpose: Contractual or operational port or point relevant to the movement of the cargo.
Syntax: **P0203** — If either R402 or R403 is present, then the other is required.
Comment: R4 is required for each port to be identified.

Implementation Note:

Use two repetitions to identify the water POE and POD.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	R401	115	Port Function Code Code defining function performed at the port with respect to a shipment. D Port of Discharge (Operational) L Port of Loading (Operational)	M	ID	1/1
Conditional	R402	309	Location Qualifier Code identifying type of location. IM Military Standard Movement Procedures (MILSTAMP) Code Value Implementation Note: Use to indicate DLMS water port code (see data element 1270, code 37).	C	ID	1/2
Conditional	R403	310	Location Identifier Code which identifies a specific location.	C	AN	1/30
Not Used	R404	114	Port Name	O	AN	2/24
Not Used	R405	26	Country Code	O	ID	2/3
Not Used	R406	174	Terminal Name	O	AN	2/30
Not Used	R407	113	Pier Number	O	AN	1/4
Not Used	R408	156	State or Province Code	O	ID	2/2

Implementation Note:

Use the appropriate water port code.

Segment: **H3** Special Handling Instructions
Level: Header
Loop: ____
Usage: Optional
Max Use: 20
Purpose: To specify special handling instructions in coded or free-form format
Syntax: **E0102** — Only one of H301 or H302 may be present.

Implementation Notes:

1. Use this segment to specify special handling requirements applicable to the entire shipment.
2. Use multiple repetitions as needed to describe multiple special services.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	H301	152	Special Handling Code Code specifying special transportation handling instructions. AMM A.M. Delivery Requirement COU Consignee Unload DNF Do Not Freeze EP Expedite EXC Exclusive Use of Vehicle FR Fragile - Handle with Care GOC Government-Owned Containers KMD Keep Material Dry NC Notify Consignee Before Delivery OTC Temperature Control PMM P.M. Required

Segment: **N1 Name**
Level: Header
Loop: N1 **Repeat:** 12
Usage: Optional
Max Use: 1
Purpose: To identify a party by type of organization, name and code
Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.
Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.

Implementation Note:

The 1/N1/390 loop will, at a minimum, cite consignee and consignor organizations.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual 30 Service Supplier Code Value Implementation Note: Use to indicate an organization providing special handling services applicable to the entire shipment. CA Carrier CI Consignor CN Consignee	M ID 2/2
Conditional	N102	93	Name Free-form name.	C AN 1/35
Recom.	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) 2 Standard Carrier Alpha Code (SCAC) 3 Federal Maritime Commission (Ocean) (FMC) 4 International Air Transport Association (IATA)	C ID 1/2
Conditional	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2

Optional

N106 98 Entity Identifier Code

O ID 2/2

Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/390 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Segment: N2 Additional Name Information
Level: Header
Loop: N1
Usage: Optional
Max Use: 2
Purpose: To specify additional names or those longer than 35 characters in length
Implementation Note:
Use only when using 1/N102/390.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N201	93	Name Free-form name.	M AN 1/35
Optional	N202	93	Name Free-form name.	O AN 1/35

Optional

Segment: N3 Address Information

Level: Header

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To specify the location of the named party

Implementation Note:

Use only when using 1/N102/390.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N301	166	Address Information Address information	M	AN	1/35
Optional	N302	166	Address Information Address information	O	AN	1/35

Segment: N4 Geographic Location

Level: Header

Loop: N1

Usage: Optional

Max Use: 1

Purpose: To specify the geographic place of the named party

Syntax: C0605 — If N406 is present, then N405 is required.

Comments: 1. A combination of either N401 through N404 (or N405 and N406) may be adequate to specify a location.
2. N402 is required only if city name (N401) is in the USA or Canada.

Implementation Note:

Use only when using 1/N102/390.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	N401	19	City Name Free-form text for city name.	O AN 2/30
Optional	N402	156	State or Province Code Code (Standard State/Province) as defined by appropriate government agency.	O ID 2/2
Optional	N403	116	Postal Code Code defining international postal zone code excluding punctuation and blanks (zip code for United States).	O ID 3/11
Optional	N404	26	Country Code Code identifying the country.	O ID 2/3
Conditional	N405	309	Location Qualifier Code identifying type of location.	C ID 1/2
Optional	N406	310	Location Identifier Code which identifies a specific location.	O AN 1/30

Optional

Segment: PER Administrative Communications Contact

Level: Header

Loop: N1

Usage: Optional

Max Use: 3

Purpose: To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.
2. P0506 — If either PER05 or PER06 is present, then the other is required.
3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use multiple repetitions as needed within each 1/N1/390 loop iteration.
2. Use to identify a POC and multiple communications numbers. When using multiple repetitions to identify different communications numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact	M ID 2/2

Optional

PER02	93	Name Free-form name.	O AN 1/35
-------	----	--------------------------------	------------------

Implementation Note:

Provide the last name, first name, middle initial, and rate, rank and title, when required, of the designated POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
-------	-----	---	-----------------

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of the PER segment to identify more than three numbers.
2. Do not include blank spaces or dashes between the numbers.

Not Used	H305	257	Tariff Application Code	O	ID	1/1

Optional

Segment: S5 Stop Off Details

Level: Header

Loop: S5 Repeat: 50

Usage: Optional

Max Use: 1

Purpose: To specify stop-off details in terms of weight, quantity and volume.

Syntax: 1. P0304 — If either S503 or S504 is present, then the other is required.
2. P0506 — If either S505 or S506 is present, then the other is required.
3. P0708 — If either S507 or S508 is present, then the other is required.

Semantic: S509 = stop reason description.

Implementation Notes:

1. Use the 1/S5/450 loop to identify stop-off locations, stop sequence, and the consignee and consignor of shipment units unloaded at that stop. Also, use the 1/S5/450 loop to provide consignee and consignor information for individual shipment units within consolidation shipments. Use the 1/REF/530 segment to link stop-off locations, sequence, and consignee and consignor information to one or more shipment units specified in table 2.
2. Shipments unloaded/loaded at a stop-off may be consigned to either the stop-off location or a different consignee by either the stop-off consignor or a different consignor. To accommodate this, indicate the stop number in 1/S501/450 and use multiple iterations of the 1/N1/490 loop to provide associated consignee and consignor information for shipment units unloaded at that stop. Index each consignee or consignor iteration sequentially, starting with 1, in 1/REF/530. This index number provides a link to individual shipment units in table 2.
3. Shipments consolidated within a consolidation pack may be consigned to the same consignee as the consolidation pack or a different consignee by either the consignor of the consolidation pack or a different consignor. To accommodate this, indicate the number 1 in 1/S501/450 and qualify as a consolidation shipment by indicating the code UL in 1/S502/450. Use multiple iterations of the 1/N1/490 loop to provide associated consignee and consignor information for the consolidation pack and shipment units consolidated within the pack. Index each consignee or consignor iteration sequentially starting with 1 in 1/REF/530. This index number provides a link to individual shipment units in table 2.
4. Do not use the 1/S5/450 loop in transactions that pertain only to one shipment unit with a single consignor and consignee. Use the 1/N1/390 loop in that case.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	S501	165	Stop Sequence Number	M	N0	1/2
			Identifying number for the specific stop and the sequence in which the stop is to be performed.			
			Implementation Notes:			
			1. For stop-off shipments, cite numeric 1 in the first 1/S5/450 loop iteration. In each subsequent loop iteration, increase incrementally by 1. Iterations of the 1/S5/450 loop should correspond to the stop-off sequence of the actual movement.			
			2. For consolidation pack shipments, cite numeric 1 in the only iteration of the 1/S5/450 loop.			
Mandatory	S502	163	Stop Reason Code	M	ID	2/2
			Code specifying the reason for the stop.			

CU Complete Unload

Code Value Implementation Note:

Use to indicate an unloading at the final stop.

PL Part Load

PU Part Unload

UL Unload

Code Value Implementation Note:

Use to indicate the unloading of a consolidation shipment.

Required

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 5**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. The 1/N1/490 loop will, at a minimum, identify the loading or the unloading location as appropriate.

2. Use multiple loop iterations as needed to identify the consignor(s) and/or consignee(s) for shipment units loaded/unloaded at this location.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CI Consignor	
		Code Value Implementation Note:	
		Use within each 1/SS/450 loop iteration to identify the consignor of one or more shipment units loaded/unloaded at this location.	
		CN Consignee	
		Code Value Implementation Note:	
		Use within each 1/SS/450 loop iteration to identify the consignee of one or more shipment units loaded/unloaded at this location.	
		LP Loading Party	
		Code Value Implementation Note:	
		Use within each 1/SS/450 loop, as needed, to identify the loading location.	
		UP Unloading Party	
		Code Value Implementation Note:	
		Use within each 1/SS/450 loop iteration, as needed, to identify the unloading location.	
Conditional	N102	93 Name	C AN 1/35
		Free-form name.	

Implementation Note:

Use only when the identified party does not have an assigned DoDAAC. When using, do not use N103 and N104.

Conditional	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC)	C	ID	1/2
Conditional	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Not Used	N106	98	Entity Identifier Code	O	ID	2/2

Optional	Segment: N2 Additional Name Information
	Level: Header
	Loop: N1
	Usage: Optional
	Max Use: 2
	Purpose: To specify additional names or those longer than 35 characters in length
	Implementation Note: Use only when using 1/N102/490.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N201	93	Name Free-form name.	M	AN	1/35
Optional	N202	93	Name Free-form name.	O	AN	1/35

Optional

Segment: N3 Address Information
Level: Header
Loop: N1
Usage: Optional
Max Use: 2
Purpose: To specify the location of the named party

Implementation Note:
Use only when using 1/N102/490.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N301	166	Address Information Address information	M AN 1/35
Optional	N302	166	Address Information Address information	O AN 1/35

Segment: N4 Geographic Location
Level: Header
Loop: N1
Usage: Optional
Max Use: 1
Purpose: To specify the geographic place of the named party
Syntax: C0605 — If N406 is present, then N405 is required.
Comments: 1. A combination of either N401 through N404 (or N405 and N406) may be adequate to specify a location.
2. N402 is required only if city name (N401) is in the USA or Canada.
Implementation Note:
Use only when using 1/N102/490.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	N401	19	City Name Free-form text for city name.	O AN 2/30
Optional	N402	156	State or Province Code Code (Standard State/Province) as defined by appropriate government agency.	O ID 2/2
Optional	N403	116	Postal Code Code defining international postal zone code excluding punctuation and blanks (zip code for United States).	O ID 3/11
Optional	N404	26	Country Code Code identifying the country.	O ID 2/3
Conditional	N405	309	Location Qualifier Code identifying type of location.	C ID 1/2
Optional	N406	310	Location Identifier Code which identifies a specific location.	O AN 1/30

Optional

Segment: REF Reference Numbers

Level: Header

Loop: N1

Usage: Optional

Max Use: 12

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. A single repetition is required for each 1/N1/490 loop iteration where N101 is CN or CI. Do not use when N101 is UP or LP.

2. Use to indicate a unique sequence number that links a stop-off consignee and/or consignor to one or more shipment units indicated in table 2. The 2/REF/060 will contain the matching sequence number to link a specific stop-off consignor and/or consignee to a shipment unit.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	REF01	128	Reference Number Qualifier Code qualifying the Reference Number. 55 Sequence Number	M ID 2/2
			Code Value Implementation Note: Use to indicate a stop-off consignor and/or consignee sequence number. For the first consignor (if known) cite a numeric 1. Also cite a 1 in the subsequent loop iteration to identify the corresponding consignor (if known). Increment each subsequent consignor/consignee loop iteration pair by one.	
Required	REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C AN 1/30
Not Used	REF03	352	Description	C AN 1/80

Optional

Segment: PER Administrative Communications Contact**Level:** Header**Loop:** N1**Usage:** Optional**Max Use:** 3**Purpose:** To identify a person or office to whom administrative communications should be directed

- Syntax:** 1. P0304 — If either PER03 or PER04 is present, then the other is required.
2. P0506 — If either PER05 or PER06 is present, then the other is required.
3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use to identify points of contact at stop-off locations.
2. Use to identify a POC and multiple communications numbers. When using multiple repetitions to identify different communications numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact	M	ID	2/2

Optional

PER02	93	Name Free-form name.	O	AN	1/35
-------	----	--------------------------------	---	----	------

Implementation Note:

Provide the last name, first name, middle initial, and rate, rank and title, when required, of the designated POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier Code identifying the type of communication number.	C	ID	2/2
-------	-----	---	---	----	-----

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of the PER segment to identify more than three numbers.
2. Do not include blank spaces or dashes between the numbers.

AU Defense Switched Network**Code Value Implementation Note:**

Not Used	N906	623	Time Code	O	ID	2/2

Optional

Segment: H3 Special Handling Instructions

Level: Detail

Loop: LX

Usage: Optional

Max Use: 1

Purpose: To specify special handling instructions in coded or free-form format

Syntax: E0102 — Only one of H301 or H302 may be present.

Implementation Notes:

1. Use this segment only to specify special handling requirements applicable to the individual shipment unit identified in the iteration of the 2/LX/010 loop.
2. Use multiple repetitions as needed to describe multiple special services.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Conditional	H301	152	Special Handling Code Code specifying special transportation handling instructions.	C	ID	2/3
			AMM A.M. Delivery Requirement			
			COU Consignee Unload			
			DNF Do Not Freeze			
			EP Expedite			
			EXC Exclusive Use of Vehicle			
			FR Fragile - Handle with Care			
			GOC Government-Owned Containers			
			KMD Keep Material Dry			
			NC Notify Consignee Before Delivery			
			OTC Temperature Control			
			PMM P.M. Delivery Requirement			
			PTS Protective Tarp For Security Purposes

Not Used	H305	257	Tariff Application Code	O	ID	1/1

Required

Segment: L5 Description, Marks and Numbers

Level: Detail

Loop: LX

Usage: Optional

Max Use: 10

Purpose: To specify the line item in terms of description, quantity, packaging, and marks and numbers.

Syntax: 1. P0304 — If either L503 or L504 is present, then the other is required.
2. C0706 — If L507 is present, then L506 is required.
3. P0809 — If either L508 or L509 is present, then the other is required.

Comment: L502 may be used to send quantity information as part of the product description.

Implementation Note:

Use to provide the commodity description. When using in the first 2/LX/010 loop for a consolidated shipment unit, use to indicate the commodity description applicable to the complete shipment unit.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	L501	213	Lading Line Item Number Sequential line number for a lading item.	O NO 1/3
Optional	L502	79	Lading Description Description of an item as required for rating and billing purposes.	O AN 1/50
Implementation Note: In the 200 loop, use the commodity description FREIGHT ALL KINDS. In all other cases, use the appropriate commodity description from the NMFC.				
Conditional	L503	22	Commodity Code Code describing a commodity or group of commodities.	C AN 1/30
Implementation Note: Use the appropriate air or water commodity code.				
Conditional	L504	23	Commodity Code Qualifier Code identifying the commodity coding system used for Commodity Code. I Milstamp AITC or Water Commodity Code	C ID 1/1
Code Value Implementation Note: Use to indicate air or water codes (see data element 1270, code 33 or code 34, respectively).				
Not Used	L505	103	Packaging Code	O AN 3/5
Not Used	L506	87	Marks and Numbers	C AN 1/45

Not Used	L510	595	Compartment ID Code	O ID 1/1

Optional

Segment: PER Administrative Communications Contact**Level:** Detail**Loop:** LX**Usage:** Optional**Max Use:** 5**Purpose:** To identify a person or office to whom administrative communications should be directed

- Syntax:**
1. P0304 — If either PER03 or PER04 is present, then the other is required.
 2. P0506 — If either PER05 or PER06 is present, then the other is required.
 3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use to identify POC for hazardous certification.
2. Use to identify a POC and multiple communications numbers. When using multiple repetitions to identify different communications numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PER01	366 Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact	M ID 2/2
Required	PER02	93 Name Free-form name.	O AN 1/35
Implementation Note: Provide the last name, first name, middle initial, and rate, rank and title, when required, of the designated POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.			
Conditional	PER03	365 Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
Implementation Notes:			
1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of the PER segment to identify more than three numbers.			
2. Do not include blank spaces or dashes between the numbers.			
AU Defense Switched Network			
Code Value Implementation Note: Use to identify the DSN telephone number.

--------------	------------	----------------------------------	-------------	-------------

Segment: **LH6** Hazardous Certification

Level: Detail

Loop: LX

Usage: Optional

Max Use: 5

Purpose: To specify the name of the person certifying that the shipment complies with the regulations and/or the actual certification.

Syntax: **P0203** — If either LH602 or LH603 is present, then the other is required.

Implementation Note:
Use multiple repetitions, as needed, to define applicable data.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	LH601	93	Name Free-form name.	O	AN	1/35
Conditional	LH602	272	Hazardous Certification Code Code indicating the form of the hazardous certification. 1 Abbreviated Hazardous Certification 2 Long Form of Hazardous Certification	C	ID	1/1
Conditional	LH603	273	Hazardous Certification Declaration Hazardous material certification verbiage as required by Title 49 of Code of Federal Regulations.	C	AN	1/25
Optional	LH604	273	Hazardous Certification Declaration Hazardous material certification verbiage as required by Title 49 of Code of Federal Regulations.	O	AN	1/25

Required

Segment: L0 Line Item - Quantity and Weight

Level: Detail

Loop: L0 **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To specify quantity, weight, volume and type of service for a line item including applicable "quantity/rate-as" data.

- Syntax:**
1. P0203 — If either L002 or L003 is present, then the other is required.
 2. P0405 — If either L004 or L005 is present, then the other is required.
 3. P0607 — If either L006 or L007 is present, then the other is required.
 4. P0809 — If either L008 or L009 is present, then the other is required.
 5. C1104.— If L011 is present, then L004 is required.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	L001	213	Lading Line Item Number	O	N0	1/3
Not Used	L002	220	Billed/Rated-as Quantity	C	R	1/11
Not Used	L003	221	Billed/Rated-as Qualifier	C	ID	2/2
Conditional	L004	81	Weight Numeric value of weight.	C	R	1/10

Implementation Note:

For shipments loaded in MILVAN and RORO trailers, the gross shipment weight equals the weight of the cargo plus the weight of the MILVAN or RORO trailer. In all other cases, the gross shipment weight equals the cargo weight only. Express as a whole number without decimals; fractions are rounded up to next whole number.

Conditional	L005	187	Weight Qualifier Code defining the type of weight. G Gross Weight	C	ID	1/2
-------------	------	-----	---	---	----	-----

Conditional	L006	183	Volume Value of volumetric measure.	C	R	1/8
-------------	------	-----	--	---	---	-----

Implementation Notes:

1. For shipments loaded in MILVAN and RORO trailers, volume equals the outside cube of the MILVAN or RORO trailer. For example, the volume of an 8' X 8' X 20' MILVAN is 1280 cubic feet.
2. For SEAVAN, other palletized, and unitized shipment units, volume equals the actual cube of the cargo being shipped.
3. Express as a whole number without decimals; fractions are rounded up to next whole number.

Conditional	L007	184	Volume Unit Qualifier Code identifying the volume unit. E Cubic Feet	C	ID	1/1
-------------	------	-----	--	---	----	-----

Conditional	L008	80	Lading Quantity Number of units (pieces) of the lading commodity.	C	N0	1/7
			Implementation Note: <i>Number of shipment units in RORO.</i>			
Conditional	L009	211	Packaging Form Code Code for packaging form of the lading quantity	C	ID	3/3
			BAG Bag			
			BAL Bale			
			BBL Barrel			
			BDL Bundle			
			BOT Bottle			
			BOX Box			
			BSK Basket or hamper			
			Code Value Implementation Note: <i>Use to identify a basket.</i>

			Code Value Implementation Note: <i>Use to identify tote.</i>			
Optional	L010	458	Dunnage Description Material used to protect lading.	O	AN	2/25
			Implementation Note: <i>For SEAVANs and MILVANs equipped with mechanical loading devices, cite the number of bracing bar/beams furnished with the SEAVAN or MILVAN.</i>			

Optional	L011	188	Weight Unit Code Code specifying the weight unit	O	ID	1/1
			L Pounds			
Optional	L012	56	Type of Service Code Code specifying extent of transportation service requested.	O	ID	2/2
			HH House-to-house			
			HP House-to-pier			
			PH Pier-to-house			
			PP Pier-to-pier			

Optional

Segment: MEA Measurements

Level: Detail

Loop: L0

Usage: Optional

Max Use: 10

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances, and weights

(See Figures Appendix for example of use of C001.)

Syntax: 1. R03050608 — At least one of MEA03, MEA05, MEA06 or MEA08 is required.

2. C0504 — If MEA05 is present, then MEA04 is required.

3. C0604 — If MEA06 is present, then MEA04 is required.

4. L07030506 — If MEA07 is present, then at least one of MEA03, MEA05 or MEA06 are required.

5. E0803 — Only one of MEA08 or MEA03 may be present.

Semantic: MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

Comment: When citing dimensional tolerances, any measurement requiring a sign (+ or -), or any measurement where a positive (+) value cannot be assumed use MEA05 as the negative (-) value and MEA06 as the positive (+) value.

Implementation Notes:

1. Use to indicate supplemental information for ammunition, lift limitations, and oversize/outsize cargo.

2. Use multiple repetitions to identify the unique data associated with the transaction.

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
MEA01	737	Measurement Reference ID Code	O ID 2/2
		Code identifying the broad category to which a measurement applies	
		CT Counts	
		LL Lift Limitation	
		Code Value Implementation Note:	
		Use to identify lift limits at either the origin or destination and the lift limits of the ship's gear.	
		NX Net Explosive Weight	
		PK Package Dimensions	

Required

MEA02	738	Measurement Qualifier	O ID 1/3
		Code identifying a specific product or process characteristic to which a measurement applies	
		HT Height	
		LN Length	
		RT Rounds Ammunition/Military	

		WD Width				
		WT Weight				
Conditional	MEA03	739	Measurement Value	C	R	1/20
			The value of the measurement.			
			Implementation Note: <i>Express as a whole number with decimal positions, as needed.</i>			
Conditional	MEA04	C001	COMPOSITE UNIT OF MEASURE	C		
			To identify a composite unit of measure			
			(See Figures Appendix for examples of use.)

Optional

Segment: LH1 Hazardous Identification Information

Level: Detail

Loop: LH1 **Repeat:** 100

Usage: Optional

Max Use: 1

Purpose: To specify the hazardous commodity identification reference number and quantity.

- Comments:**
1. LH101 and LH102 are used to convey the number and type of packages for bulk and non-bulk movements.
 2. LH106 and LH107 are used to convey the quantity or volume and unit of measure for non-bulk shipments only.
 3. LH109 value of "R" requires that the receiver generate the words "Residue: Last Contained" prior to the shipping name in accordance with regulations and the words "- Residue" following all placards associated with this description.

Implementation Note:

Use multiple loop iterations, as needed.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LH101	355	Unit or Basis for Measurement Code	M ID 2/2
		Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	

Implementation Note:

Use to identify the type package containing hazardous material.

BC Bucket
BG Bag
BO Bottle
BR Barrel
BX Box
CA Case
CB Carboy
CL Cylinder
CN Can
CT Carton
DR Drum
JR Jar
JU Jug
KE Keg
PF Pallet (Lift)
PK Package
PL Pallet/Unit Load

Mandatory	LH102	80	Lading Quantity Number of units (pieces) of the lading commodity.	M	N0	1/7
Implementation Note: Use to indicate the quantity of hazardous material packages.						
Optional	LH103	277	UN/NA Identification Code Code identifying the hazardous material identification number as required by Title 49 of the code of Federal Regulators. UN/NA stands for United Nations/North America.	O	ID	6/6
Implementation Note: Use to indicate the identification number from column 4 of the CFR 49 Hazardous Materials Table (172.101).						
Not Used	LH104	200	Hazardous Materials Page	O	AN	1/6
Not Used	LH105	22	Commodity Code	O	AN	1/30
Optional	LH106	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	O	ID	2/2
Implementation Note: Use to identify the unit of measurement of hazardous material.						
2A Radians Per Second						
2B Radians Per Second Squared						
2R Kilocurie						
3E Pounds Per Pound of Product						
4D Curie

61 Parts Per Billion						
AZ British Thermal Units (BTUs) per Pound						
B0 British Thermal Units (BTUs) per Cubic Foot						
FA Fahrenheit						
GA Gallon						
GH Half Gallon						
MU Millicurie						
Optional	LH107	380	Quantity Numeric value of quantity.	O	R	1/15
Implementation Note: Use to indicate the quantity of hazardous material. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.						
Not Used	LH108	595	Compartment ID Code	O	ID	1/1
Optional	LH109	665	Residue Indicator Code Code indicating that the shipment is not a loaded movement but contains a residue from a prior movement.	O	ID	1/1
Implementation Note: Use for empty packages containing hazardous material residue.						
R Residue Last Contained Description						
Optional	LH110	254	Packing Group Code Code indicating degree of danger in terms of Roman number I, II or III.	O	ID	1/3

Implementation Note:

Use to indicate the packaging group from column 3 of the CFR 49 Hazardous Materials Table. Also use for shipments going to or passing through Canada.

Not Used

LH111 1375 Interim Hazardous Material Regulatory Number

O AN 1/5

Segment: LH2 Hazardous Classification Information

Level: Detail

Loop: LH1

Usage: Optional

Max Use: 4

Purpose: To specify the hazardous classification, placard notation and endorsement information.

Syntax: P0607 — If either LH206 or LH207 is present, then the other is required.

Semantic: LH206 and LH207 indicates the flashpoint temperature.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	LH201	215	Hazardous Classification The hazardous classification corresponding to the shipping name of the hazardous commodity.	O ID 1/30
Optional	LH202	983	Hazardous Class Qualifier Code qualifying hazardous class. P Primary S Secondary	O ID 1/1
Optional	LH203	218	Hazardous Placard Notation The placard notation corresponding to the hazard class of the hazardous commodity.	O ID 14/40
Optional	LH204	222	Hazardous Endorsement The placard endorsement that is to be shown on the shipping papers for the hazardous commodity.	O ID 4/25
Optional	LH205	759	Reportable Quantity Code Code to identify presence of hazardous substance. RQ Reportable Quantity	O ID 2/2
Conditional	LH206	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken CE Centigrade, Celsius FA Fahrenheit	C ID 2/2
Conditional	LH207	408	Temperature Temperature.	C R 1/4

Segment: **LH3** Hazardous Material Shipping Name

Level: Detail

Loop: LH1

Usage: Optional

Max Use: 12

Purpose: To specify the hazardous material shipping name and additional descriptive requirements.

Syntax: P0102 — If either LH301 or LH302 is present, then the other is required.

Implementation Note:
Use one repetition, as needed, to identify hazardous material name and source information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Conditional	LH301	224	Hazardous Material Shipping Name The proper shipping name of the hazardous commodity as specified by the Code of Federal Regulations, Title 49.	C AN 1/25
Conditional	LH302	984	Hazardous Material Shipping Name Qualifier Qualifier indicating the source (regulatory) of the proper shipping name. C Canadian Shipping Name D Domestic (United States) Shipping Name I International Shipping Name	C ID 1/1
Optional	LH303	985	N.O.S. Indicator Code Code indicating the type of regulatory requirements that apply to a description. N.O.S. stands for Not Otherwise Specified.	O ID 3/3

Segment: **LFH** Freeform Hazardous Material Information

Level: Detail

Loop: LH1

Usage: Optional

Max Use: 20

Purpose: To uniquely identify the variable information required by government regulation covering the transportation of hazardous material shipments

Implementation Note:

Use multiple repetitions, as needed, to identify hazardous material shipment information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	LFH01	808	Hazardous Material Shipment Information Qualifier Qualifier indicating the type of information being passed so that a receiver may format a description of hazardous commodity movements that meets regulatory requirements. ADI Additional Descriptive Information Not Required by Regulation but Desired to Accompany the Movement by the Shipper DWW "Dangerous When Wet" Declaration HZC Hazardous Substance Constituents INH Inhalation Hazard LQY "Limited Quantity" Declaration PIH "Poison - Inhalation Hazard" Declaration POI "Poison" Declaration RAM Radioactive Material Data TEC Technical or Chemical Group Name TNM Trade Name	M ID 3/3
Mandatory	LFH02	809	Hazardous Material Shipment Information Specific information required by law for hazardous material shipments.	M AN 1/25
Optional	LFH03	809	Hazardous Material Shipment Information Specific information required by law for hazardous material shipments.	O AN 1/25
Optional	LFH04	1023	Hazard Zone Code Code specifying the Department of Transportation assigned zone designating the Inhalation Toxicity Hazard Zone.	O ID 1/1

Implementation Note:

Use one code when LFH01 contains either INH or PIH.

- A Hazard Zone A
- B Hazard Zone B
- C Hazard Zone C
- D Hazard Zone D

Segment: **LH4** Canadian Dangerous Requirements

Level: Detail

Loop: LH1

Usage: Optional

Max Use: 1

Purpose: To specify additional Canadian Transport Goods Directorate requirements covering transportation of dangerous commodities in Canada.

Comments: 1. LH402 is used for the emergency response plan telephone number.
2. LH404 is for the first subsidiary classification.
3. LH405 is for the second subsidiary classification.
4. LH406 is for the third subsidiary classification.

Implementation Note:

Must use for shipments from, to, or passing through Canada.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	LH401	238 Emergency Response Plan Number The identity number of a specific hazardous emergency response plan that is assigned by the Director General of Canada.	O AN 1/12
Not Used	LH402	364 Communication Number	O AN 1/80
Optional	LH403	254 Packing Group Code Code indicating degree of danger in terms of Roman number I, II or III.	O ID 1/3
Optional	LH404	230 Subsidiary Classification Code indicating the classification of dangerous goods, other than the primary classification, that is associated with a number or a set of numbers.	O ID 1/3
Optional	LH405	230 Subsidiary Classification Code indicating the classification of dangerous goods, other than the primary classification, that is associated with a number or a set of numbers.	O ID 1/3
Optional	LH406	230 Subsidiary Classification Code indicating the classification of dangerous goods, other than the primary classification, that is associated with a number or a set of numbers.	O ID 1/3
Optional	LH407	271 Subsidiary Risk Indicator Code identifying the type of subsidiary risk.	O ID 1/2
Optional	LH408	267 Net Explosive Quantity Net weight of the explosive quantity of the hazardous commodity.	O NO 1/6
Optional	LH409	805 Canadian Hazardous Notation Notation required by Canadian regulatory agencies.	O AN 1/25
Not Used	LH410	986 Special Commodity Indicator Code	O ID 1/1

Segment: **LHT** Transborder Hazardous Requirements
Level: Detail
Loop: LH1
Usage: Optional
Max Use: 3
Purpose: To specify the placard information required by the second government agency when shipment is to cross into another country

Implementation Note:

Use multiple repetitions, as needed, to identify placard information.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	LHT01	215	Hazardous Classification The hazardous classification corresponding to the shipping name of the hazardous commodity.	O ID 1/30
Optional	LHT02	218	Hazardous Placard Notation The placard notation corresponding to the hazard class of the hazardous commodity.	O ID 14/40
Optional	LHT03	222	Hazardous Endorsement The placard endorsement that is to be shown on the shipping papers for the hazardous commodity.	O ID 4/25

Segment: **LHE** Empty Equipment Hazardous Material Information
Level: Detail
Loop: LH1
Usage: Optional
Max Use: 1
Purpose: To specify the "last contained" hazardous shipping name, placard notation and reference numbers for empty equipment.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	LHE01	224	Hazardous Material Shipping Name The proper shipping name of the hazardous commodity as specified by the Code of Federal Regulations, Title 49.	M AN 1/25
Mandatory	LHE02	218	Hazardous Placard Notation The placard notation corresponding to the hazard class of the hazardous commodity.	M ID 14/40
Not Used	LHE03	128	Reference Number Qualifier	M ID 2/2
Not Used	LHE04	127	Reference Number	M AN 1/30
Optional	LHE05	759	Reportable Quantity Code Code to identify presence of hazardous substance.	O ID 2/2

Segment: SE Transaction Set Trailer

Level: Summary

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

APPENDIX 2B

TRANSPORTATION CONTROL NUMBER

2B APPENDIX 2B - TRANSPORTATION CONTROL NUMBER

The TCN is a 17 position data element assigned by the shipper to control and manage a shipment unit throughout the transportation pipeline. The TCN for each shipment unit is unique and not duplicated.

2B.1 TCN CONSTRUCTION

Instructions for constructing the TCN for various types of shipments are detailed in the subsections listed below:

<u>Type of Shipment</u>	<u>Subsection</u>
Shipments in response to requisitions	2B.1.1
Security Assistance (FMS/MAP) shipments	2B.1.2
Nonappropriated fund activity shipments	2B.1.3
Unit move shipments	2B.1.4
ARFCOS shipments	2B.1.5
Mail shipments from postal activities	2B.1.6
Cargo shipments not otherwise listed	2B.1.7
Personal property shipments	2B.1.8
SEAVAN or MILVAN shipments	2B.1.9

2B.1.1 SHIPMENTS IN RESPONSE TO REQUISITIONS

<u>TCN Position</u>	<u>Explanation</u>
1-14	Use the transaction reference number of the requisition. If multiple requisitions are in one shipment, use any one of the transaction reference numbers.
15	Use the assigned suffix; if none, indicate "X."
16	Enter the partial shipment code from section 2B.2, below.
17	Enter the split shipment code from section 2B.2, below.

2B.1.2 SECURITY ASSISTANCE (FMS/MAP) SHIPMENTS

<u>TCN Position</u>	<u>Explanation</u>
1-14	Indicate the transaction reference number of the requisition. If multiple requisitions are in one shipment, use any one of the transaction reference numbers.
15	Indicate the assigned suffix; if none enter "X."

16 Enter the partial shipment code from section 2B.2, below.

17 Enter the split shipment code from section 2B.2, below.

2B.1.3 NONAPPROPRIATED FUND ACTIVITY SHIPMENTS

TCN Position

Explanation

1-6 Enter the DoDAAC of the consignee or ordering activity, if assigned; if not, enter the DoDAAC of the facility where the consignee or ordering activity is located.

7 Enter the last digit of the calendar year in which the shipment is made.

8-10 Enter the day-of-the-year when the TCN is constructed.

11 Enter a type shipment code from the following list:

Code

Definition

M Service clubs and messes

W Welfare and recreation (Special Services)

N All other non-AAFES/NRSO shipments

0-9 AAFES or NRSO shipments (any alpha except I, L, M, N, O, V, or W may also be used).

12-14 Enter the last three digits of the purchase order or any alpha except I or O for AAFES or NRSO shipments

15 Enter "X" unless the shipment must be shipped from multiple plant or warehouse locations. For multiple locations, identify each shipping point as indicated below:

Code

Definition

A 1st location

B 2nd location

C-Z 3rd through 23rd location (I, O, and X are not used.)

16 Enter the partial shipment code from section 2B.2, below.

17 Enter the split shipment code from section 2B.2, below.

2B.1.4 UNIT MOVE SHIPMENTS

TCN Position

Explanation

1 Service code (A = Army, N = Navy, F = Air Force, and M = Marine Corps).

<u>TCN Position</u>	<u>Explanation</u>
2-8	Army units will enter unit identification code and unit line number. Navy, Air Force, and Marine Corps units will enter unit line number.
9-10	For Service use. This field requires a data entry. Do not leave blank. If no data available or applicable, zero fill.
11-14	Enter the shipment number, increment number, or serial number.
15	Enter "0" to indicate unit cargo TCN.
16	Enter the partial shipment code from section 2B.2, below.
17	Enter the split shipment code from section 2B.2, below.

2B.1.5 ARFCOS SHIPMENTS

<u>TCN Position</u>	<u>Explanation</u>
1-3	Enter the letters "CTS."
4-6	Enter the air terminal identifier.
7	Enter the last digit of the calendar year.
8-10	Enter the day-of-the-year.
11	Enter the letter "X."
12-14	Enter a sequential serial number beginning with 001 and ending with ZZZ
15-17	Enter the letters "XXX."

2B.1.6 MAIL SHIPMENTS FROM POSTAL ACTIVITIES

<u>TCN Position</u>	<u>Explanation</u>
1-6	Enter the abbreviation or 5 digit ZIP code, preceded by a 0 (zero), of the postal activity making the shipment, e.g., NYCPCC or 009633.
7	Enter the last digit of the calendar year.
8-10	Enter the day-of-the-year.
11	Enter the letter "X."
12-14	Enter a sequential serial number beginning with 001 and ending with ZZZ
15-17	Enter the letters "XXX."

2B.1.7 CARGO SHIPMENTS NOT OTHERWISE LISTED

<u>TCN Position</u>	<u>Explanation</u>												
1-6	Enter the DoDAAC of the activity assigning the TCN.												
7	Enter the last digit of the calendar year.												
8-10	Enter the day-of-the-year the TCN is assigned.												
11	Enter a type shipment code from the following list.												
	<table> <tr> <th><u>Code</u></th><th><u>Definition</u></th></tr> <tr> <td>R</td><td>Red disk, unit moves</td></tr> <tr> <td>S</td><td>Subsistence, resale</td></tr> <tr> <td>T</td><td>Subsistence, issue</td></tr> <tr> <td>X</td><td>Miscellaneous, not otherwise listed</td></tr> <tr> <td>Z</td><td>Unit organizational equipment other than red or yellow disk, unit moves</td></tr> </table>	<u>Code</u>	<u>Definition</u>	R	Red disk, unit moves	S	Subsistence, resale	T	Subsistence, issue	X	Miscellaneous, not otherwise listed	Z	Unit organizational equipment other than red or yellow disk, unit moves
<u>Code</u>	<u>Definition</u>												
R	Red disk, unit moves												
S	Subsistence, resale												
T	Subsistence, issue												
X	Miscellaneous, not otherwise listed												
Z	Unit organizational equipment other than red or yellow disk, unit moves												
12-14	Enter a sequential serial number beginning with 001 and ending with ZZZ.												
15	Enter "X" unless the shipment must be shipped from multiple plant or warehouse locations. For multiple locations, identify each shipping point as indicated below:												
	<table> <tr> <th><u>Code</u></th><th><u>Definition</u></th></tr> <tr> <td>A</td><td>1st location</td></tr> <tr> <td>B</td><td>2nd location</td></tr> <tr> <td>C-Z</td><td>3rd through 23rd location (I, O, and X not used.)</td></tr> </table>	<u>Code</u>	<u>Definition</u>	A	1st location	B	2nd location	C-Z	3rd through 23rd location (I, O, and X not used.)				
<u>Code</u>	<u>Definition</u>												
A	1st location												
B	2nd location												
C-Z	3rd through 23rd location (I, O, and X not used.)												
16	Enter the partial shipment code from section 2B.2, below.												
17	Enter the split shipment code from section 2B.2, below.												

2B.1.8 PERSONAL PROPERTY SHIPMENTS

<u>TCN Position</u>	<u>Explanation</u>
1	Enter the appropriate sponsoring Service code, i.e., A = Army, N = Navy, F = Air Force, or M = Marine Corps.
2	Enter the last digit of the fiscal year.
3-5	Enter the day-of-the-year for the date a POV is delivered to the POE or date the shipment is to be picked up.

6-14 Enter the member's or employee's social security number.

15 Enter a type shipment code from the following list:

<u>Code</u>	<u>Definition</u>
B	Unaccompanied baggage (DPM)
J	Unaccompanied baggage (TGBL)
H	Household goods (DPM)
K	Household goods (TGBL)
P	POV

16 Enter the partial shipment code from section 2B.2, below.

17 Enter the split shipment code from section 2B.2, below.

2B.1.9 SEAVAN OR MILVAN SHIPMENTS

<u>TCN Position</u>	<u>Explanation</u>
1-6	Enter the DoDAAC of the activity loading the SEAVAN or MILVAN.
7-10	Enter the last four positions of the voyage document number assigned during booking process.
11	Enter the letter "V."
12-14	Enter the serial number assigned by the clearance authority or booking office.
15-16	Enter the SEAVAN service codes from the following list. Enter the origin service code in position 15 and the destination service code in position 16:

<u>Code</u>	<u>Definition</u>
K	At carrier's terminal (pier service)
L	In the commercial zone of the U.S. port city or, outside the United States, within 10 miles of the port city limits. Certain port cities that are divided into modified zones as listed in the MSC Container Agreement and Rate Guide (see volume 1 references) are assigned codes 1-9 instead of code L (local drayage).
M	At any point not covered by codes K, L, or 1-9 (line haul).

17

<u>Code</u>	<u>Definition</u>
P	Same as code M, except one or more stop-offs enroute to final destination have been booked with the ocean carrier.

Enter the type SEAVAN code from the following list:

<u>Code</u>	<u>Definition</u>
2	Dry cargo
3	Platform or flatbed
4	Open top
5	Refrigerated
6	Top filling
7	Insulated
8	Open frame or rack
9	Tank type
A	High cube dry van (9 feet 6 inches or higher)
B	High cube refrigerated
C	High cube insulated
D	Trailer
E	Dry rail car
F	Reefer rail car
G	Garment container
H	Rail flatrack
X	Special or experimental

2B.2 PARTIAL AND SPLIT SHIPMENT CODES

The partial and split shipment codes indicate whether or not a shipment unit has been separated into increments, and if separated, identify the increments. The partial and split shipment codes are required to ensure TCNs are not duplicated. While the same letter codes are used for both partial and split shipment entries, the partial shipment entry (TCN position 16) is made by the shipper and the split shipment entry (TCN position 17) is made by the transshipper. The procedures for assignment of partial and split shipment codes for air and ocean mode in construction of the TCN are the same; i.e., the last position in the TCN should reflect nothing follows.

2B.2.1 AIR SHIPMENTS

Partial shipment codes. When assigning a TCN to air cargo, the shipper selects a partial shipment code from section 2B.2.1.1, below, for each increment of the shipment unit moved on a separate conveyance. In addition, by assigning each 23 pieces, or fraction thereof, a separate partial shipment code, the shipper ensures no partial contains more than 23 pieces. Limiting each partial shipment to 23 pieces allows the air terminal operator to assign a split shipment code to each piece of the shipment unit. The shipper enters the appropriate partial shipment code in TCN position 16 and the letter "X" in position 17.

Split shipment codes. As indicated above, the shipper the enters the letter "X" in TCN position 17. Whenever the shipment contains more than one piece, the air terminal entering the shipment into the airlift system assigns a unique TCN to each piece by entering the appropriate TCN position 17 split shipment code and lists the TCNs for each piece on the air manifest. The split shipment codes are listed in section 2B.2.1.1, below.

2B.2.1.1 AIR PARTIAL AND SPLIT SHIPMENT CODES

When identifying partial and split shipments, enter one of the following codes:

<u>Code</u>	<u>Partial Shipments</u>	<u>Split Shipments</u>
X	Complete shipment unit not separated into partials and containing 23 pieces or less	Complete shipment unit consisting of only one piece
A	1st partial shipment	1st piece
B	2d partial shipment	2d piece
C	3d partial shipment	3d piece
D	4th partial shipment	4th piece
E	5th partial shipment	5th piece
F	6th partial shipment	6th piece
G	7th partial shipment	7th piece
H	8th partial shipment	8th piece
J	9th partial shipment	9th piece
K	10th partial shipment	10th piece
L	11th partial shipment	11th piece
M	12th partial shipment	12th piece
N	13th partial shipment	13th piece
P	14th partial shipment	14th piece
Q	15th partial shipment	15th piece

<u>Code</u>	<u>Partial Shipments</u>	<u>Split Shipments</u>
R	16th partial shipment	16th piece
S	17th partial shipment	17th piece
T	18th partial shipment	18th piece
U	19th partial shipment	19th piece
V	20th partial shipment	20th piece
W	21st partial shipment	21st piece
Y	22d partial shipment	22d piece
Z	23d partial shipment	23d piece

2B.2.2 OCEAN SHIPMENTS

Partial shipment codes. When assigning a TCN to ocean cargo, the shipper selects a partial shipment code from section 2B.2.2.1, below, for each increment of the shipment unit moved on a separate conveyance. The shipper enters the appropriate partial shipment code in TCN position 16 and enters the letter "X" in position 17.

Split shipment codes. As indicated above, the shipper enters the letter "X" in TCN position 17. The ocean terminal does not alter the TCN unless it is necessary to split the shipment unit and move it onward by more than one conveyance. Such a split includes loading into more than one SEAVAN, MILVAN, or RORO container. Stowage in multiple holds on the same ship is indicated by separate manifest entries, not split TCN entries. Split shipment codes are listed in section 2B.2.2.1, below.

2B.2.2.1 OCEAN PARTIAL AND SPLIT SHIPMENT CODES

When identifying partial and split shipments, enter one of the following codes:

<u>Code</u>	<u>Definition</u>
X	Entire shipment unit moved together
A	1st increment of a partial or split shipment
B	2d increment of a partial or split shipment
C	3d increment of a partial or split shipment
D	4th increment of a partial or split shipment
E	5th increment of a partial or split shipment
F	6th increment of a partial or split shipment
G	7th increment of a partial or split shipment
H	8th increment of a partial or split shipment

<u>Code</u>	<u>Definition</u>
J	9th increment of a partial or split shipment
K	10th increment of a partial or split shipment
L	11th increment of a partial or split shipment
M	12th increment of a partial or split shipment
N	13th increment of a partial or split shipment
P	14th increment of a partial or split shipment
Q	15th increment of a partial or split shipment
R	16th increment of a partial or split shipment
S	17th increment of a partial or split shipment
T	18th increment of a partial or split shipment
U	19th increment of a partial or split shipment
V	20th increment of a partial or split shipment
W	21st increment of a partial or split shipment
Y	22d increment of a partial or split shipment
Z	Last increment of a partial or split shipment

APPENDIX 2C

SHIPMENTS TO TURKEY

2C APPENDIX 2C - SHIPMENTS TO TURKEY

Prior approval is required to import the following material: vehicles (all types), computers and communications systems, generators, classified cargo (refer to classified supplement of the DoD Foreign Clearance Guide), major items of equipment (MIE) which are listed in the Defense and Economic Agreement (DECA), arms, ammunition, and new equipment which has been identified by the TGS as requiring customs clearance. Separate project approval is required prior to requesting cargo clearance for new equipment, generators, and MIE which will result in a mission or capability change, or revision to the MIE listing (see USDRT Memoranda 3, 8, and 25). Cargo for Foreign Military Sales (FMS) is exempt from requirement.

2C.1 LEAD TIME REQUIREMENT

Assuming the Host Nation Agreement (HNA) has already been granted, TGS clearance for major equipment should be requested as soon as requirement is known but not later than 30 days prior to movement. Any changes in cargo to be shipped after initial submission constitutes a new clearance and must be submitted with a new 30-day lead time. ODC Ankara will advise of approval or disapproval in all cases and provide a Turkish Defense Agreement (TDA) number to the requesting unit. Cargo must not be sent if a TDA number has not been issued. Cargo arriving in Turkey without a TDA number is seized by Turkish customs. This last point cannot be emphasized enough: **"DO NOT SHIP CARGO WITHOUT A TDA NUMBER!"** DoD shipping activities will ensure the TDA number is included on the military shipping label (DD Form 1387) in the "mark for" block. All cargo requiring TGS clearance arriving at any aerial or water ports without TDA number identified on the MSL should be frustrated until such time as disposition instructions are received from the shipper.

2C.2 CONTENTS OF CLEARANCE REQUEST

Cargo clearance for TGS prior approval will include the following:

2C.2.1 GENERATORS

Must specify nomenclature, stock number, serial number (existing and new), model, KW capacity, whether fixed or mobile, purpose, impact, method of movement, and routing within Turkey. Vehicle requests must include vehicle number, year and model number, point of departure, point of entry into Turkey, final destination, and mode of shipment.

2C.2.2 CONVENTIONAL MUNITIONS/ARMS

Requests for movement of conventional munitions/arms will be processed in accordance with USDRT Memoranda Seven. These requests must be coordinated with DET 2 39 WG ANKARA TU//LGW and provide at a minimum the following information:

- A. Action requested (import, export, transfer)
- B. Origin
- C. Destination
- D. Transfer point within Turkey
- E. DoDIC
- F. Nomenclature (use complete nomenclature found in appropriate technical orders or supply manuals)
- G. Quantity (rounds/each individual item)
- H. TGS authorized quantity

- H. TGS authorized quantity
- I. Current quantity on hand
- J. Previous requests approved by TGS, but not yet received (for same type weapon/munitions, indicate TDA number and quantity)
- K. Previous requests pending TGS approval (indicate date-time group of message)
- L. Mode of transportation

2C.2.3 CLASSIFIED CARGO

For classified cargo consult the Turkey pages of the DoD Foreign Clearance Guide (FCG) classified supplement.

2C.2.4 EXERCISES INVOLVING TURKISH PARTICIPATION

Cargo in support of exercises involving Turkish participation does not require prior clearance. Such cargo must be clearly marked "IN SUPPORT OF EXERCISE _____" and must reference an EXOPORD or Exercise Memorandum of Understanding.

2C.3 MESSAGE ADDRESS FOR CARGO TGS CLEARANCES

2C.3.1 CARGO DESTINED TO 39TH WING

Vehicles: 39 LG INCIRLIK AB TU//LGTV//
Info: 39 ABW INCIRLIK AB TU//LGT//

Generators, arms, and MIE: 39 LG INCIRLIK AB TU//LGSM//
Info: 39 CS INCIRLIK AB TU//LGS//

Munitions: 39 LG INCIRLIK AB TU//LGWO//
Info: 39 ABW INCIRLIK AB TU//LGW//

Computers and Communications: 39 CS INCIRLIK AB TU//SCX//
Info: 39 CS INCIRLIK AB TU//CC//

2C.3.2 OTHER TURKEY-WIDE CARGO CLEARANCE REQUESTS

All other Turkey-wide cargo clearance requests are sent directly to the appropriate functional area at DET 2 39 WG ANKARA TURKEY for action, for example:

Vehicles, generators, and MIE: DET 2 39 WG ANKARA TU//LGT//
Info: ODC ANKARA TU//AFD//

Computers and Communications: DET 2 39 WG ANKARA TU//SC//
Info: ODC ANKARA TU//AFD//

Arms, munitions, and all CTF provide comfort equipment: DET 2 39 WG ANKARA TU//LGW//
Info: ODC ANKARA TU//AFD//

APPENDIX 2D

TRANSACTION SET 856 IMPLEMENTATION CONVENTION INTRANSIT DATA REPORT

856 Ship Notice/Manifest

This Draft Standard for Trial Use contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics, type of packaging, marking, carrier information, and configuration of goods within the transportation equipment. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail and provides an ordered flexibility to convey information.

The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment.

Implementation Note

Organizations use this transaction set to report item tracking, tracing and diversion information to the DAAS and the next intransit processing point organization (transshipper or consignee) along the route of movement for items intransit from the original shipping organization to the ultimate consignee. This information includes palletized and/or containerized shipment unit information.

21	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

2/010 The HL segment is the only mandatory segment within the HL loop, and by itself, the HL segment has no meaning.

3/010 Number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of units shipped (SN102) for each SN1 segment.

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 856 X12.10 Ship Notice/Manifest	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BSN Beginning Segment for Ship Notice

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To transmit identifying numbers, dates and other basic data relating to the transaction set

Syntax: C0706 — If BSN07 is present, then BSN06 is required.

Semantic: 1. BSN03 is the date the shipment transaction set is created.
2. BSN04 is the time the shipment transaction set is created.
3. BSN06 is limited to shipment related codes

Comment: BSN06 and BSN07 differentiate the functionality of use for the transaction set

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BSN01 353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise Code Value Implementation Note: <i>Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.</i>	M ID 2/2
Mandatory	BSN02 396	Shipment Identification A unique control number assigned by the original shipper to identify a specific shipment. Implementation Note: <i>Use to identify the single TCN that encompasses the entire shipment. If needed, additional TCNs assigned to consolidated shipment units will be identified in the 2/REF/150 segment.</i>	M AN 2/30
Mandatory	BSN03 373	Date Date (YYMMDD).	M DT 6/6
Mandatory	BSN04 337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) Implementation Notes: 1. Express the originating activity's time in GMT.	M TM 4/8

2. Express time in a four-position (HHMM) format.

Not Used	BSN05	1005	Hierarchical Structure Code	O	ID	4/4
Required	BSN06	640	Transaction Type Code	C	ID	2/2
			Code specifying the type of transaction.			
			60 Material In Transit

	Level: Header			
	Loop: _____			
	Usage: Optional			
	Max Use: 10			
	Purpose: To specify pertinent dates and times			
	Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.			
	2. P0607 — If either DTM06 or DTM07 is present, then the other is required.			
	Implementation Note:			
	Use two repetitions to specify actual shipment and estimated delivery dates.			
	Data Element Summary			
	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M ID 3/3
	Implementation Notes:			
	1. For surface shipments, express as the receiving activity's local date.			
	2. For air shipments, express the date in GMT.			
			011 Shipped	
			017 Estimated Delivery	
Required	DTM02	373	Date Date (YYMMDD).	C DT 6/6
Conditional	DTM03	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	C TM 4/8
	Implementation Notes:			
	1. Express the originating activity's time in GMT.			
	2. Express time in a four-position (HHMM) format.			
	3. Use only for air shipments.			
Optional	DTM04	623	Time Code Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a + or - and an indication in hours in relation to Universal Time Coordinate (UTC) time. Since + is a restricted character, + and - are substituted by P and M in the codes that follow. GM Greenwich Mean Time	O ID 2/2
Not Used	DTM05	624	Century	O NO 2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C ID 2/3
Not Used	DTM07	1251	Date Time Period	C AN 1/35

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** 200000

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. The transaction set hierarchical data structure is: Address loop, Equipment loop(s), Pack loop(s), Subpack loop(s), and Unit loop(s).

2. Must use the first 2/HL/010 loop iteration to provide transaction set address information.

3. Use one or more Equipment loops to define the type of conveyance (mode) and optional identification of the specific pieces of equipment. No TCNs should be assigned at this level.

4. Use Pack, Subpack, and Unit loops to identify shipment units (TCN's) and to describe levels of consolidation of these units as needed.

Unit loops represent the lowest level of consolidation. At least one Unit level loop is required for each Equipment loop. If items are consolidated to two levels use Pack and Unit. If items are consolidated to three levels use Pack, Subpack, and Unit.

Every Pack, Subpack, and Unit loop iteration must identify a single TCN.

NOTE: The TCN representing the highest level of consolidation will be the same TCN as identified in 1/BSN02/20.

5. **EXAMPLE 1:** A SEAVAN containing 2 pallets, the first pallet containing 3 separate shipment units each with a TCN and the second pallet containing 4 shipment units each with a TCN would utilize 12 iterations of this 2/HL/010 loop structured as:

1 Address loop, 1 Equipment loop (describing the equipment conveying the SEAVAN), 1 Pack loop with the TCN assigned to the SEAVAN. A first Subpack loop with the TCN assigned to the first pallet. Three unit loops each with a TCN. A second Subpack loop with the TCN assigned to the second pallet. Four Unit loops each with a TCN.

6. **EXAMPLE 2:** A railroad flat car containing a single vehicle would be structured as: A single Address loop, a single Equipment loop, and a single Unit loop with the TCN assigned to the vehicle.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12
			Implementation Note: In the first 2/HL/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by one.	
Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O AN 1/12
			Implementation Note: Use in Equipment, Pack, Subpack, and Unit loops to cite the number contained in HL01 of the appropriate parent or next higher level 2/HL/010 loop.	
Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure.	M ID 1/2
			E Transportation Equipment Code Value Implementation Note: Must use to indicate an Equipment loop. There must be at least one Equipment loop iteration. An Equipment loop must have the Address loop as its parent. Each Equipment loop must have at least one subordinate Pack or Unit loop.	
			P Pack Code Value Implementation Note: Use to indicate a Pack loop. If present, a Pack loop must have an Equipment loop as its parent. Each Pack loop must have at least one subordinate Subpack or Unit loop.	
			Q Subpack Code Value Implementation Note: Use to indicate a Subpack loop. If present a Subpack loop must have a Pack loop as its parent. Each Subpack loop must have at least one subordinate Unit loop.	
			UT Unit or Lot Code Value Implementation Note: Must use to indicate a Unit loop. At least one Unit loop must be used. A Unit loop must have an Equipment, Pack, or Subpack loop as its parent. A Unit loop cannot have a subordinate loop.	
			V Address Information Code Value Implementation Note: Must use to indicate the Address loop. The single Address loop must be the first iteration of the 2/HL/010 loop. The Address loop must have at least one subordinate Equipment loop.	

Not Used	HL04	736	Hierarchical Chlld Code	O	ID	1/1
----------	------	-----	-------------------------	---	----	-----

Optional

Segment: TD1 Carrier Details (Quantity and Weight)

Level: Detail

Loop: HL

Usage: Optional

Max Use: 20

Purpose: To specify the transportation details relative to commodity, weight and quantity.

Syntax:

1. C0102 — If TD101 is present, then TD102 is required.
2. C0304 — If TD103 is present, then TD104 is required.
3. C0607 — If TD106 is present, then TD107 is required.
4. P0708 — If either TD107 or TD108 is present, then the other is required.

Implementation Note:

Use in Pack, Subpack, and Unit loops to identify a MILVAN/SEAVAN, RORO trailer, or 463L pallet as the type of packaging. Other types of packaging are not specifically identified.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	TD101	103	Packaging Code Code identifying the type of packaging. Part 1. Packaging form. Part 2. Packaging Material.	O AN 3/5
			PLT Pallet	
			Code Value Implementation Note: Use in Pack, Subpack, or Unit loops to indicate the shipment unit is a pallet with an assigned TCN.	
			VPK Van Pack	
			Code Value Implementation Note: Use in Pack or Unit loops to indicate the shipment unit is a MILVAN or SEAVAN with an assigned TCN.	
			WLC Wheeled Carrier	
			Code Value Implementation Note: Use in Pack or Unit loops to indicate the shipment unit is a RORO trailer with an assigned TCN.	
Not Used	TD102	80	Lading Quantity	C NO 1/7
Not Used	TD103	23	Commodity Code Qualifier	O ID 1/1
Not Used	TD104	22	Commodity Code	C AN 1/30
Not Used	TD105	79	Lading Description	O AN 1/50
Not Used	TD106	187	Weight Qualifier	O ID 1/2
Not Used	TD107	81	Weight	C R 1/10
Not Used	TD108	355	Unit or Basis for Measurement Code	C ID 2/2

Optional

Segment: TD5 Carrier Details (Routing Sequence/Transit Time)

Level: Detail

Loop: HL

Usage: Optional

Max Use: 12

Purpose: To specify the carrier, sequence of routing and to provide transit time information

Syntax: 1. R0204050612 — At least one of TD502, TD504, TD505, TD506 or TD512 is required.

2. C0203 — If TD502 is present, then TD503 is required.

3. C0708 — If TD507 is present, then TD508 is required.

4. C1011 — If TD510 is present, then TD511 is required.

Comment: When specifying a routing sequence to be used for the shipment movement in lieu of specifying each carrier within the movement: use TD502 to identify the party responsible for defining the routing sequence; use TD503 to identify the actual routing sequence, specified by the party identified in TD502.

Implementation Note:

Use at most a single occurrence in each 2/HL/010 Equipment loop to identify shipment routing and carrier.

Data Element Summary

Optional

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
TD501	133	Routing Sequence Code	O ID 1/2
		Code describing the relationship of a carrier to a specific shipment movement.	

Implementation Note:

Use for rail transactions to identify mandatory rail routing requirements. Use as needed for motor transactions.

- 1 1st Carrier after Origin Carrier
- 2 2nd Carrier after Origin Carrier
- 3 3rd Carrier after Origin Carrier
- 4 4th Carrier after Origin Carrier
- 5 5th Carrier after Origin Carrier
- 6 6th Carrier after Origin Carrier
- 7 7th Carrier after Origin Carrier
- 8 8th Carrier after Origin Carrier
- 9 9th Carrier after Origin Carrier
- A Origin Carrier, Agent's Routing (Rail)
- B Origin/Delivery Carrier (Any Mode)
- D DELY (Delivery Switch Carrier)
- I Origin Switch Carrier
- O Origin Carrier (Air, Motor, or Ocean)
- R Origin Carrier, Rule 11 Shipment

			S Origin Carrier, Shipper's Routing (Rail)			
			V Intermediate Switch Carrier			
Required	TD502	66	Identification Code Qualifier	C	ID	1/2
			Code designating the system/method of code structure used for Identification Code (67).			
			Implementation Note:			
			Use one of codes 2, 3, or 4 to identify a commercial carrier. In TD503 use the commercial carrier code from the appropriate source reference.			
			2 Standard Carrier Alpha Code (SCAC)			
			3 Federal Maritime Commission (Ocean) (FMC)			
			4 International Air Transport Association (IATA)			
			GA Primary Agent Identification			
			Code Value Implementation Note:			
			Use for military aircraft or sealift movement; in TD503, use AMC for Air Mobility Command or MSC for Military Sealift Command.			
Required	TD503	67	Identification Code	C	AN	2/20
			Code identifying a party or other code.			
Not Used	TD504	91	Transportation Method/Type Code	C	ID	1/2
Not Used	TD505	387	Routing	C	AN	1/35
Not Used	TD506	368	Shipment/Order Status Code	C	ID	2/2
Not Used	TD507	309	Location Qualifier	O	ID	1/2
Not Used	TD508	310	Location Identifier	C	AN	1/30
Not Used	TD509	731	Transit Direction Code	O	ID	2/2
Not Used	TD510	732	Transit Time Direction Qualifier	O	ID	2/2
Not Used	TD511	733	Transit Time	C	R	1/4
Not Used	TD512	284	Service Level Code	C	ID	2/2

Optional

Segment: TD3 Carrier Details (Equipment)

Level: Detail

Loop: HL

Usage: Optional

Max Use: 12

Purpose: To specify transportation details relating to the equipment used by the carrier.

Syntax: 1. C0203 — If TD302 is present, then TD303 is required.
2. C0405 — If TD304 is present, then TD305 is required.
3. P0506 — If either TD305 or TD306 is present, then the other is required.

Implementation Notes:

1. Must use only in 2/HL/010 Equipment loops to identify the military or commercial equipment (air, motor, water, or rail) used to convey the shipment unit.
2. Use multiple occurrences as needed within a single Equipment loop iteration to identify multiple pieces of equipment conveying a single shipment unit (many-to-one).
Otherwise, use only a single occurrence within each Equipment loop iteration to identify a piece of equipment conveying one or more shipment units (one-to-many).
In those movements where several pieces of equipment are conveying several distinct shipment units, generate sufficient Equipment loop iterations to create one of the two situations above (i.e., many-to-many is not allowed).

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
TD301	40	Equipment Description Code Code identifying type of equipment used for shipment.	M ID 2/2

Implementation Note:

Use only one code to identify carrier equipment.

AP Aircraft

Code Value Implementation Note:

Use to identify the aircraft tail number.

CN Container

Code Value Implementation Note:

Use for MILVAN or SEAVAN.

TL Trailer (not otherwise specified)

Code Value Implementation Note:

Use for RORO trailer shipment.

TR Tractor

Code Value Implementation Note:

Use to identify a tractor's identifying number.

TV Truck, Van

Code Value Implementation Note:

Use to identify a truck or van identifying number.

VT Vessel, Ocean, Containership

		Code Value Implementation Note: <i>Use to identify a ships name and/or identification number.</i>			
Optional	TD302	206	Equipment Initial Prefix or alphabetic part of an equipment unit's identifying number.	O AN	1/4
		Implementation Note: <i>Use only to cite an equipment prefix number where the entire number cannot be cited in TD303.</i>			
Conditional	TD303	207	Equipment Number Sequencing or serial part of an equipment unit's identifying number (pure numeric form for equipment number is preferred).	C AN	1/10
Not Used	TD304	187	Weight Qualifier	O ID	1/2
Not Used	TD305	81	Weight	C R	1/10

Not Used	TD308	407	Seal Status Code	O ID	2/2
Not Used	TD309	225	Seal Number	O AN	2/15

Required

Segment: REF Reference Numbers**Level:** Detail**Loop:** HL**Usage:** Optional**Max Use:** >1**Purpose:** To specify identifying numbers.**Syntax:** R0203 — At least one of REF02 or REF03 is required.**Implementation Notes:**

1. Must use at least one occurrence in the 2/HL/010 address loop to identify shipment control number(s) associated with the movement.
2. Use a single occurrence as needed in any equipment loop to identify a flight or voyage number.
3. Must use at least one occurrence in every Pack, Subpack, or Unit loop to identify the TCN.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2
		AF Airlines Flight Identification Number Code Value Implementation Note: Use only in 2/HL/010 address loops to identify the commercial or military flight number.	
		AW Air Waybill Number Code Value Implementation Note: Use only in 2/HL/010 address loops to identify the air waybill associated with the movement.	
		BL Government Bill of Lading Code Value Implementation Note: Use only in 2/HL/010 address loops to identify the GBL associated with the movement.	
		BM Bill of Lading Number Code Value Implementation Note: Use only in 2/HL/010 address loops to identify the CBL associated with the movement.	
		CN Carrier's Reference Number (PRO/Invoice) Code Value Implementation Note: Use only in 2/HL/010 address loops.	
		OB Ocean Bill of Lading Code Value Implementation Note: Use only in 2/HL/010 address loops.	
		OC Ocean Container Number Code Value Implementation Note: Use in 2/HL/010 Pack, Sub-pack or, Unit loops to identify a MILVAN, SEAVAN, or RORO identification number.	
		TG Transportation Control Number (TCN) Code Value Implementation Note: Must use in every 2/HL/010 Pack, Sub-pack, and Unit loop to identify the TCN associated with the shipment unit.	

V3 Voyage Number

Code Value Implementation Note:

Use only in 2/HL/010 equipment loops to identify the voyage number associated with the shipment.

Conditional	REF02	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			

Not Used	REF03	352	Description	C	AN	1/80
----------	-------	-----	-------------	---	----	------

Optional

Segment: N1 Name**Level:** Detail**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:*Use only in the 2/HL/010 address loop to identify the activities preparing and receiving the transaction set and the ship-to activity.***Data Element Summary**

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual CJ Automated Data Processing (ADP) Point Code Value Implementation Note: <i>Use to identify the DAASC as the activity receiving the transaction set.</i> SH Shipper Code Value Implementation Note: <i>Use to identify the shipping or transshipping activity preparing the transaction set.</i> ST Ship To Code Value Implementation Note: <i>Use to identify the next activity along the shipment route of movement. This activity will be the next location to receive and/or process the shipment.</i>	M ID 2/2

Conditional

N102	93	Name Free-form name.	C AN 1/35
------	----	--------------------------------	-----------

Implementation Note:*Use only to identify an activity not assigned a DoDAAC.*

Conditional

N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C ID 1/2
------	----	--	----------

Conditional

N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
------	----	---	-----------

Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code	O	ID	2/2
			Code identifying an organizational entity, a physical location, or an individual			

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 2/N101/220 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: N3 Address Information

Level: Detail

Loop: N1

Usage: Optional

Max Use: 2

Purpose: To specify the location of the named party

Implementation Note:

Use only to identify an activity not assigned a DoDAAC.

Data Element Summary

APPENDIX 2E

**TRANSACTION SET 861 IMPLEMENTATION CONVENTION
SHIPMENT RECEIPT INFORMATION**

861 Receiving Advice/Acceptance Certificate

This Draft Standard for Trial Use contains the format and establishes the data contents of the Receiving Advice/Acceptance Certificate Transaction Set (861) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide for customary and established business and industry practice relative to the notification of receipt or formal acceptance of goods and services.

Implementation Note

Receiving activities (consignees) and/or intransit processing point organizations (transhippers) use this transaction set to report actual or intransit shipment receipt dates and times to DAASC.

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT
N/U	010	CTT	Transaction Totals	O	1	
14	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

1/020 This transaction set is a receiving advice unless BRA04 contains a value of "8". When BRA04 contains a value of "8", the transaction set is an Acceptance Certificate and the units received is the units accepted.

3/010 The number of line items (CTT01) is the accumulation of the number of RCD segments. If used, hash total (CTT02) is the sum of the value of quantities received (RCD02) for each RCD segment.

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 861 X12.12 Receiving Advice	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BRA Beginning Segment for Receiving Advice or Acceptance Certificate

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of a receiving advice or acceptance certificate transaction set and to transmit an identifying number, date and time

Semantic: 1. BRA02 is the date that the receiving advice transaction set is created.
2. BRA05 is the time that the receiving advice transaction set is created.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BRA01	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	M AN 1/30
			Implementation Note: Use to identify the single TCN that identifies the received shipment in entirety. This TCN should match the TCN in 11BSN02/010 of a previously received 856 Intransit Visibility Report.	
Mandatory	BRA02	373	Date Date (YYMMDD).	M DT 6/6
			Implementation Note: Express the originating activity's date in GMT.	
Mandatory	BRA03	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 77 Simulation Exercise	M ID 2/2
			Code Value Implementation Note: Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.	
Mandatory	BRA04	962	Receiving Advice or Acceptance Certificate Type Code Code specifying type of receiving advice 1 Receiving Dock Advice	M ID 1/1
			Code Value Implementation Note: Use to indicate actual receipt of shipment.	
Required	BRA05	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O TM 4/8

Required

Segment: N1 Name

Level: Header

Loop: N1 **Repeat:** 200

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

Must use two loop iterations to identify the shipment receiving activity preparing the transaction set and the DAASC.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual CJ Automated Data Processing (ADP) Point Code Value Implementation Note: Use to indicate the DAASC as the activity receiving the transaction set. CN Consignee Code Value Implementation Note: Use to identify the ultimate or intermediate receiving activity which is preparing the transaction set.	M ID 2/2

Conditional

N102	93	Name Free-form name.	C AN 1/35
------	----	--------------------------------	-----------

Implementation Note:

Use only to identify an activity not assigned a DoDAAC.

Conditional

Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

3 REQUIREMENTS FOR MOVING SHIPMENTS IN THE DTS

3.1 GENERAL

Shipments moving in the DTS are processed through one or more transshippers. A transshipper is any transportation activity, other than the shipper or consignee, that handles or documents the transfer of a shipment between conveyances and/or modes. For air cargo, the transshipper is the air terminal. The transshipper is the water port for ocean cargo. A CCP may be the transshipper servicing either air and/or surface shipments. These terminals may perform more than one type of transshipper service. For example, an air terminal or a typical water port may act as a POE and a POD. On occasion, the POE may act as a CCP and a POD as a breakbulk point.

AMC operates or arranges operation of air terminals serving AMC channels flown by scheduled AMC aircraft. Air terminals that are not operated by AMC are provided by the DoD component that operates them or, in the case of the Air Force, by the major command concerned.

Individual shipments arrive at the POE by any mode of transport, usually land by motor carrier for air terminals and by land, rail or motor carrier for water terminals. Individual unitized and containerized shipments arrive at the POD by air or ocean carrier.

Prior to receipt of shipment, the transshipper receives TS 856 IC - Intransit Data Report and TS 858 - IC International Shipment Information from the shipper and/or clearance authority. In addition, the POD receives TS XXX IC - Air Cargo Manifest/Ocean Cargo Manifest (To be determined) prior to arrival of the aircraft/ship. There may also be both carrier and shipper prepared documentation accompanying the shipment.

3.2 RECEIVING REQUIREMENTS

3.2.1 PLANNING FOR ARRIVAL OF SHIPMENTS

The POE uses available prepositioned data; and, if not available, the assistance of the shipper, sponsoring DoD component, and ACA/OCCA is rendered to prepare documentation for shipments arriving without proper or with inadequate documentation. In all cases, the sponsoring DoD component's shipper is notified of the late or inadequate submission of documentation. Time standards for documentation submission are shown in figures 2-2 and 2-3.

The POD establishes a file for each ship scheduled to arrive for unloading. The file contains transaction sets, cargo traffic messages, CORMs, CORMRs, stow plans, manifests, and any other available information about the ship. The POD also establishes procedures and followup actions to ensure information in the ship file is complete.

The POD uses manifests and other available documentation to plan for arrival of the cargo, assemble unloading tallies and clearance forms, produce forwarding documents, expedite shipments, and notify consignees or personal property carriers of cargo arrival.

- The POD uses manifest data to prepare documentation for use by the DoD component and to provide commercial carriers with documentation for onward movement. For ocean arrivals, the DoD component terminal provides customs clearance documentation to the ocean carriers for ships unloading at military ports. The DoD component terminal furnishes clearance documentation only on request for ships unloading at commercial facilities. The POD coordinates with local customs officials and provides the documentation prescribed by DoD 5030.49-R in CONUS or applicable area OCONUS publications.
- The Military activity responsible for the POD notifies household goods and baggage carriers or their agents of the impending or actual arrival of personal property shipments. To ensure prompt pickup and delivery, the notification is made as soon as possible, but not later than 48 hours after receipt of the manifest. The carrier or its agent is advised of the sponsoring member's name and grade, the shipment unit TCN, the ship name and voyage number for ocean shipments, and the actual or estimated date of arrival.
- The POD also uses the manifest to plan security and prompt onward movement of all shipments and especially for safeguarding hazardous, classified, and protected cargo.

3.2.2 NON-RECEIPT OF SHIPMENTS

The transshipper verifies shipment receipt to support intransit data requirements. For air shipments, if TP-1 shipments are not received at or offered for delivery to the POE within 1 day and TP-2 shipments within 5 days of the ETA, the POE advises the shipper and the ACA by priority message. For water shipments that are not received at or offered for delivery to the transshipper within 5 days of the ETA, the transshipper advises the shipper and the clearance authority by priority message. At a minimum, the message will identify the shipment unit TCN (and/or GBL number for water shipments), commodity description, pieces, weight, and cube data, and the ETA. Subsequent tracing actions may be requested and must be coordinated with the shipper, ACA/OCCA, carrier(s), and the transshippers.

3.2.3 RECEIPT AND UNLOADING OF CARGO

The POD documents actual receipt of cargo and maintains an audit trail using the manifest, TS 858 - IC International Shipment Information or locally produced unloading tallies. Whenever cargo is to be unloaded by a Military activity or its designated agent, every effort is made to inspect the cargo for damage or pilferage prior to removal from the aircraft/ship. If the cargo cannot be inspected before unloading, the inspection is accomplished at a point not later than the first point of rest after unloading.

Unloading documents are not classified, do not identify the classification of cargo, and contain only that information necessary to properly identify the material for accurate piece count and processing. Classified and protected cargo is, however, unloaded as soon as possible after aircraft's/ship's arrival.

The POD prepares a complete tally for cargo unloaded, including cargo not manifested. Such cargo is reported to the POE and all other stops on the itinerary. The cargo is then processed for onward movement to the consignee.

3.2.4 SHIPMENT DISCREPANCIES

Cargo unloading discrepancy information is prepared as explained below:

- For air shipments, the POD reports cargo damage and reconciles discrepancies between manifested shipments and those actually discharged. The POD eliminates many of the differences by comparison with previous overage or shortage reports, and by communicating with the POE and any other stops on the aircraft itinerary. PODs report discrepancies within the period designated by the major command (e.g., AFMC, AMC, etc.). Overages are recorded by the activities which processed the shipment. Unreconciled shortages are reported by the POD to the requisitioner to allow reordering.
- The POD forwards shipments received, but not manifested for unloading at that activity, as soon as possible. Those shipments for consignees serviced by the POD are forwarded with applicable documentation, including discrepancies, produced by the POD. Shipments for consignees not serviced by the POD are forwarded according to the following:
 - Air: The POD reports the unmanifested shipment to the POE within 24 hours of receipt. To preclude further delay, the POD processes the cargo as an intransit shipment and forwards it to the correct destination terminal by the first available aircraft. The POD also prepares any necessary documentation for manifesting and further cargo accountability.
 - Surface: The POD reports, as soon as possible, cargo which has been discharged prior to reaching the destination port (shortlanded) or cargo for a previous port found still onboard the vessel (overcarried). The report is made by priority ETM to the consignee, the POD shown on the cargo, the POE, the appropriate booking activity, and (when prescribed by the theater commander or sponsoring Service) the supply management activity.

When a shipment discrepancy (over, short, and damaged) is discovered, the transshipper documents and reports the discrepancy according to the requirements of joint regulation AR 55-38, et al. Prior to forwarding damaged shipments, the transshipper coordinates with the shipper, consignee, and/or sponsoring DoD component to ensure proper disposition of the material.

Recoopering, remarking, repacking, and similar services necessary for safe onward movement are provided by the POE.

If the shipment was not prepared by the shipper according to military standards, except marking, the POE obtains either a fund citation to correct the deficiency or disposition instructions from the sponsoring DoD component.

The transshipper reports inadequate shipment preparation according to the requirements of volume 2, chapter 18.

- The transshipper transmits TS 842 IC - Nonconformance Report - Transportation (To be developed) to report transportation discrepancies discovered at the time of delivery. The transaction set is sent to the shipper via the DAASC.
- The transshipper uses TS 842 IC - Nonconformance Report to report supply discrepancies discovered at the time of delivery. The transaction set is sent to the supply source via the DAASC.
- Refer to volume 2, chapter 18 for processing supply discrepancies.

3.2.5 CORM

For ocean shipments, the POD prepares the CORM within 10 calendar days. The CORM consists of two parts:

- Part I, the advisory, is the POD's report to MSC, the POE, activities with jurisdiction over the cargo movement beyond the POD, and other selected addressees. It reports the ships' arrival and unloading dates and whether the manifested cargo has or has not changed in quantity or condition while under the control of the ocean carrier. It also advises of any variance from contract terms that may affect payment of freight charges and permits MSC to promptly process for payment all invoices submitted by ocean carriers.
- Part II, the reconciliation, is the POD's report to the POE and intermediate ports. It reports apparent damage or pilferage, identifies overages and shortages, and requests verification of shipment details to reconcile any discrepancies. Consolidation containers, including SEAVANs, MILVANs, ROROs, etc., are reconciled on a one-for-one basis. Breakbulk cargo is reconciled only when there is an overage or shortage in total manifest line or if individual variances are significant due to value, commodity, etc.
- The CORM is sent to the OCCA responsible for the POE, the MSC areas/subareas where cargo is/was loaded or unloaded, and for information, to the OCCA that booked the cargo and the OCCAs responsible for each port on the ship's itinerary where DoD cargo is/was unloaded.

Refer to figure 3-5 for the CORM data requirements.

3.3 LOAD PLANNING

The transshipper uses actual receipt information and advanced shipment data to plan for the onward movement of both container and breakbulk cargo. Generally, shipments are processed on a first-in, first-out basis within assigned transportation priorities.

The load planning process is designed to make the most efficient use of space consistent with the safe operation of aircraft, container, breakbulk whips, truck, trailer, railcar, barge, etc. Preload planning minimizes in port and on ground/onberth time, considers the capabilities of the aircraft/ship, the weight, dimensions, perishability, and compatibility of the cargo. When cargo is containerized/unitized, the transshipper complies with the requirements of chapter 2, section 2.2.6.1.

The air POE makes the necessary plans in coordination with the AMC, the ACAs, and the aircraft crew to ensure planning is complete prior to loading for air shipments. The water port makes the necessary plans in coordination with the OCCA, booking office, and representatives of the ship operator, including crew members.

- The DoD component responsible for the water POE prepares the prestowage plan when MSC controlled ships are used. When cargo is loaded on MSC arranged commercial ships, the OCCA and/or booking office coordinates the preparation of stowage plans with the commercial ship operator. MSC representatives resolve any problems that may arise between the OCCA, booking office and the carrier.
- The ocean terminal or booking office provides the carrier with berth space planning information at least 72 hours, excluding Sundays and holidays, before the ship's onberth

date. The planning information provided includes the specific location, dimensions, and total cube of the available stowage space as provided by the ship operator. In turn, the ship operator confirms the hour and day the ship will be ready for loading.

The POD or port (for ocean shipments) makes necessary plans in coordination with inland carriers, their representatives, and the consignees.

Aircraft, ships and other carrier equipment are loaded according to standard practice for the type of aircraft/ship being used. To assist in maintaining shipment integrity, multiple piece shipment units are loaded/stowed together when reasonably possible. Split shipments/stowage are clearly and fully documented on the manifest/final stow plan.

3.4 SHIPMENT DOCUMENTATION

3.4.1 AIR SHIPMENTS

The documentation requirements listed below are the responsibility of POE or HQ AMC for air shipments.

3.4.1.1 LOAD/SEQUENCE BREAKDOWN WORKSHEET

After loading, a final plan showing the location of cargo on the aircraft is prepared. A load/sequence breakdown worksheet is prepared by the aircraft load planner. The worksheet is used to document the location of cargo, mail, and passengers aboard the aircraft and as a supportive document for preparing the DD Form 365-4, Weight and Balance Clearance Form F, or civilian equivalent.

3.4.1.2 AIR CARGO MANIFEST

A manifest listing the cargo loaded on each aircraft is prepared by the POE or its clearance authority. The information contained in appendices 2A, 2D and 2E provides the basis for preparing the manifest with the terminal operator adding necessary loading detail. The manifest is used to verify delivery of cargo, support billing for services, and to justify claims resulting from cargo discrepancies. Manifest documents are unclassified except when the sponsoring DoD component indicates a need for security classification. When classified, manifests are processed as prescribed in DoD 5200.1-R.

For air shipments by AMC, the air cargo manifest is prepared as detailed below and in regulations and instructions issued by the air system sponsor. When preparing air manifests, the POE:

- Completes separate manifests for cargo and mail. Each manifest prepared is assigned a separate air cargo manifest reference code.
- Groups palletized shipment unit data under separate sections within each manifest.
- Lists palletized shipment unit data first when the aircraft load consists of both palletized and nonpalletized cargo on a single manifest reference number and arranges nonpalletized shipment unit data in TCN sequence within each manifest.
- Prepares manifest corrections upon discovery of errors (e.g., incorrect pieces, weight, or cube). The corrected manifest prominently marked "**CORRECTED MANIFEST**" is promptly forwarded to the POD.

- The POE distributes the manifest to ensure its receipt by the time of aircraft arrival. A copy of the manifest is sent with the aircraft whenever feasible and also transmitted to the POD when communications facilities permit timely transmission and receipt. In addition, the POE sends a copy of the manifest or similar lift data to the ACA.

3.4.2 WATER SHIPMENTS

The documentation requirements listed below are the responsibility of POE and/or the ocean carrier or its agent(s) for water shipments.

3.4.2.1 OCEAN CARGO STOW PLAN

After loading is completed, a final stow plan showing the location of all DoD sponsored breakbulk cargo on the ship is prepared. Cargo stow plans need not be prepared for DoD cargo loaded and discharged at commercial terminals and transported under MSC Shipping Contract, Shipping Agreement, Container Agreement, berth term tariff, berth term reduced rates, or TGBL SEAVAN arrangements. On a LASH or SEABEE ship, the last four digits of the barge number are considered the stow location and a stow plan for cargo in or on the barge is not required.

- The cargo stow plan includes a graphic representation of the cargo onboard by tonnage, location and POD. Cargo stowed in lower holds is shown by side view while cargo stowed on deck and between decks is shown in top view. The stow plan also includes a summary, by hatch location, of cargo to be discharged at each POD, a summary and location of heavy lifts, capacity and location of the ship's booms, ship characteristics, and remarks on cargo of unusual value, protected cargo, mail, etc.
- The plan is used for loading and discharge at each subsequent port. It is a cumulative plan and shows all cargo on board regardless of loading port. When ships load or discharge at more than one port on a voyage, each terminal prepares and distributes the required number of load plans to all subsequent terminals, their representative MSC activities and area commanders, and the MTMC area command (for CONUS ports), regardless of whether loading and/or discharging is planned at those ports. Refer to figure 3-1 for cargo stow plan distribution instructions.

3.4.2.2 OCEAN CARGO MANIFEST

A manifest listing of cargo loaded on each vessel is prepared by the port operator. The information contained in the TS 858 IC - International Shipment Information provides the basis for preparing the manifest with the carrier adding necessary loading detail. The manifest is used to verify delivery of cargo, support billing for services, and to justify claims resulting from cargo discrepancies. Manifest documents are unclassified. When the sponsoring Service or Agency indicates a need for security classification, the cargo traffic message is used to convey the classified nature of the cargo. When classified, cargo traffic messages are processed in a manner consistent with DoD 5200.1-R.

A manifest is prepared for each POD and segregated according to the type of ship and/or load method. In addition, hazardous materials and dunnage and lashing gear are listed separately. Hazardous material is listed separately for each POD. Inert component parts and ORM-D material are manifested as general cargo and are not included in the hazardous material section of the manifest; however, consumer commodities, ORM-D, loaded on a ship at a military pier are documented in a separate section unless other material in the SEAVAN or MILVAN requires inclusion in the hazardous materials section of the manifest. The ORM-D section of the manifest

placed on the ship is prominently identified by the statement: "ORM-D HAZARDOUS MATERIALS OF VARIOUS CLASSES IN SMALL RECEPTACLES. IMO COMPETENT AUTHORITY CERTIFICATION(S) - USA NUMBER(S) ATTACHED." Government-owned dunnage and lashing gear, along with distribution instructions, are listed in a separate section of the manifest recapitulation for each POD.

Transaction Set (to be determined) is used by the carrier to prepare and transmit manifest data to the Government and each POD. Refer to figure 3-3 for manifest transmission time standards. The manifesting activity establishes procedures to ensure the manifest is received by the POD as early as possible before the ship arrives. Manifests for destinations with the shortest sailing times are given priority.

To allow a ship to sail from military terminals without waiting for complete manifest documentation, the POE places vessel papers onboard. Vessel papers are used to satisfy port clearance requirements and include TS 858 IC - International Shipment Information data such as destination, commodity, TCN, pieces, weight, cube, stow location, voyage number, ship name, and sailing date. A dangerous cargo list is also included when applicable.

Manifest adjustments are issued whenever an error or omission is discovered in an already dispatched or transmitted manifest.

- Changes to ship data and additions to list of PODs are forwarded to all original manifest addressees by message instead of complete retransmission of the entire manifest.
- Manifest supplements are issued to add complete shipment unit or consolidation container and content data to the manifest. The manifest supplement contains data for all shipment units or consolidation containers lifted, but not included in the original manifest. The supplemental manifest is transmitted to the same addressees as the original manifest.
- Manifest deletions are issued to delete shipment unit or consolidation container data from the original manifest when the cargo was not lifted.
- Manifest corrections are issued to change information about any shipment unit described on the original manifest. The manifest correction is also used to add or delete shipment units to or from a previously listed consolidation container.

Refer to figure 3-1 for cargo manifest distribution instructions. Refer to figure 3-3 for manifest transmission time standards.

3.4.2.3 MANIFEST RECAPITULATION

Transaction Set (To be determined) is also used for the manifest recapitulation. The recapitulation is a summation of a cargo loaded on the ship. For each POD, the recapitulation lists the consignee(s) by Service and Agency, number of long tons and measurement tons, heavy lifts by stow location and ability of ship's gear to discharge such cargo, mail by stow location, Government-owned dunnage and lash gear along with disposition instructions, terms of carriage, and the number of SEAVANs and MILVANs grouped by terms of carriage and type of SEAVAN or MILVAN.

When SEAVANs or MILVANs are transported according to the MSC Container Agreement and Rate Guide, the following statement, signed by the designated administrating contracting officer representative, is included in the manifest:

"THIS CERTIFIES THAT BASED ON INFORMATION PROVIDED BY THE OCEAN CARRIER PURSUANT TO THE MSC CONTAINER AGREEMENT AND RATE GUIDE, ALL CONTAINERS SUMMARIZED ON THE MANIFEST WERE LIFTED ON THE NAMED SHIP."

Refer to figure 3-1 for manifest recapitulation distribution instructions.

3.4.2.4 MANIFEST SUMMARY

The manifest summary is a summation by TAC, of all of the DoD-sponsored cargo loaded on one ship. A manifest summary is prepared for each manifest. For each Service or Agency responsible for paying transportation charges, the summary includes the following, separately listed for each POD:

- A summary of measurement tons of cargo grouped by TAC, including nonsignificant TACs. Within each TAC grouping, measurement tons are totaled by commodity group. Measurement tons are rounded to the nearest whole number; i.e., 6.5 to 6.9 measurement tons are rounded to 7 while 6.1 to 6.4 are rounded to 6.
- A separate summary is provided for all cargo loaded on deck.
- Cargo summarized under a nonsignificant TAC is listed last along with its related TS 858 IC - International Shipment Information data. The DoD component finance offices are responsible for resolving and reconciling TAC errors.

Whenever SEAVANs and MILVANs are transported under the MSC Container Agreement and Rate Guide, the certification shown in subsection 3.4.2.3, above, is included on the summary.

Refer to figure 3-1 for manifest summary distribution instructions.

3.4.2.5 CARGO TRAFFIC MESSAGE

The military activity having jurisdiction over the loading terminal prepares the cargo traffic message for all manifested shipments. The cargo traffic message is sent to the military terminal(s) having jurisdiction over the ship's ports of call.

When classified material is shipped, the loading terminal prepares a separate cargo traffic message identifying each classified shipment unit, its TCN, container number, seal number, stow location, degree of classification, and any additional appropriate instructions. The cargo traffic message is not classified unless required by procedures implemented under DoD 5200.1-R.

The information in the cargo traffic message includes:

- Commodities and measurement tons of cargo and, when applicable, the number of SEAVANs or MILVANs.
- Transshipment ports and manifested PODs along with the ETA at transshipment ports and PODs.
- Responsibility for transshipment costs and the name(s) of each on-carrying ship or the letters TBN when unknown or designation of overland mode if not by ship.

When the transshipment ship(s) is(are) identified, or when another ship is substituted, or when it is determined after shipping that the cargo will be transshipped, a supplemental cargo traffic message is sent to all addressees of the original cargo traffic message.

The military activity preparing the cargo traffic message transmits the message according to the time schedule set forth in figure 3-4.

3.4.2.6 CARGO OUTTURN ADVISORY AND RECONCILIATION MESSAGE REPLY

The final document prepared by the POE is the CORMR which is prepared in response to the CORM. The POE receives the CORM from the POD. The content of the CORM is described below. If the POE has not received the CORM within 20 calendar days following ship's ETA, the POE sends a message to the POD requesting the CORM.

Within 10 days of the date of receipt of the CORM, the POE reconciles any discrepancies shown. The POE then prepares and sends the CORMR to the originator of the CORM and all addressees of the CORM. The CORMR contains the following information in the order indicated:

- Message subject: CORM REPLY.
- Line 1: Ports of loading and unloading in code and clear text, e.g., 1GC MOT BAYONNE, JF1 BREMERHAVEN.
- Line 2: Ship name and voyage number as indicated in the CORM.
- Line 3 and as many additional lines as necessary, in columns with the following headings:
 - ITEM: Cite the item number from the CORM.
 - TCN from the CORM.
 - DISPOSITION: Indicate the status of the shipment unit identified by the above cited TCN in the overage or shortage section of the CORM, i.e., SHIPPED ON VOY A1266, INCLUDED IN MANIFEST SUPPLEMENT NUMBER 3, ETC.

3.4.3 INTRANSIT DATA

The TS 861 IC - Shipment Receipt Information is used by the transshipper and the consignee to report the actual date and time of shipment receipt. This transaction set provides the transshipper and the consignee a positive method of reporting shipment receipt. The transaction set is prepared by the transshipper or consignee and sent to the DAASC.

The TS 856 IC - Intransit Data Report is used by the transshipper to record and report the movement of shipment units through the DTS. This transaction set provides the transshipper a positive method of reporting the actual date and time of shipment for each shipment unit. The transaction set is prepared by the transshipper and transmitted to the next receiving point (i.e., the POD or the consignee) and then on to DAASC.

3.4.4 ADDITIONAL POD DOCUMENTATION REQUIREMENTS

The POD is responsible for producing documentation necessary to effect movement of the cargo from the POD to the appropriate inland destination. Information relating to documentation requirements and instructions for completing such documentation are contained in chapter 2, sections 2.2 and 2.3.

3.4.5 CONSIGNEE PROCESSING REQUIREMENTS

The consignee receives advanced documentation on inbound shipments via the TS 858 IC - International Shipment Information and TS 856 IC - Intransit Data Report. This data is used to establish due-in files and to verify shipment receipt. The data on file is compared with the container content tag data, carrier furnished documentation, and any shipper and/or transshipper documentation that may accompany the shipment.

The consignee coordinates with the POD to ensure the timely receipt of SEAVANs and their prompt release to the carrier after unloading. The consignee makes every reasonable effort to ensure SEAVANs are unloaded and released to the carrier within the free time allowed. Failure to unload and release the SEAVANs to the carrier within the allowable free time results in detention charges. These detention charges are billed separately from ocean and/or inland charges and are assessed against the activity considered responsible for causing the cost to be incurred, usually the consignee; however, if the consignee can show that the detention was incurred as a result of conditions beyond its control such as improper blocking and bracing which caused the load to shift, bunching of container deliveries by the carrier, etc., the charges will be billed to the shipper, transshipper, etc. For shipments delivered to a location other than the ultimate consignee (requisitioner); e.g., central receiving, the TO arranges for delivery to the ultimate consignee.

The consignee documents and reports discrepancies (over, short, and damage) according to the requirements of joint regulation AR 55-38. TS 842 IC - Nonconformance Report - Transportation (Currently being developed), is used to report transportation discrepancies.

The consignee responds promptly to inquiries for information in support of discrepancy reports and intransit visibility. These responses may be in the form of transaction sets, telephone calls, standards or DD Forms, or messages.

The consignee also maintains records to detail all transportation receiving actions undertaken. Publications contained in volume 1 references and DoD component publications detail the length of time and method for keeping such records.

3.5 HOLDING, DIVERTING, AND TRACING

Transshippers may be required to hold, divert, and/or trace shipments.

The transshipper may hold and/or divert a shipment at the request of the sponsoring DoD component for such reasons as an embargo. The hold is intended to be brief and only long enough for the transshipper to receive diversion or disposition instructions. Once the shipment has left the shipper, the cost of handling normally limits diversion or hold authorization. When the transshipper receives TS XXX IC - Shipment Hold Request (To be determined), the transshipper prepares TS XXX IC - Shipment Hold Reply (To be determined) to advise the requesting activity of the shipment being held current status.

- When the shipment is held, the shipment hold reply will advise the requesting activity the shipment is being held at the transshipper and will request disposition instructions be provided within 72 hours.
- If the transshipper determines the affected shipment unit has been lifted or is in a SEAVAN or MILVAN and it would be too expensive to unload and reload, the shipment will not be held and the requesting activity will be so advised.

The POE may be requested to divert a shipment unit. A transportation diversion is limited by cost, but may be a change of mode (e.g., air to water), a change of destination, and/or a change of route. In addition, after leaving the shipper, only complete shipment units are diverted or held, i.e., individual items are not removed from multiple line shipment units nor is a shipping container removed from a multicontainer shipment unit with one TCN. The requesting activity submits TS XXX IC - Shipment Diversion Request (To be determined) to request a change in mode, destination, and/or route.

- After the shipment has reached the POE, a diversion between modes normally occurs only as a result of a change in the urgency of need. Such a change may result in a planned air shipment being moved by surface and is coordinated by the applicable ACA/OCCA.
- A diversion to a different consignee or destination may result from conditions such as strikes, national disturbances, or acts of God; supply cancellations, termination of projects, changes in logistics buildup, modification of permanent change of station orders authorizing personal property shipments or change in receiving locations for mobile units.
- A diversion in the route of a shipment normally occurs within a particular mode (i.e., air or water) and is usually directed and coordinated by the ACA/OCCA, DoD component sponsor or booking office.

Shipment tracing through LIPS allows the requesting or receiving activity to locate an intransit shipment. While tracing assistance is normally obtained from the clearance authorities, the transshipper may occasionally be asked for shipping data. The transshipper responds to such requests by providing all available information.

Requests for and responses to holding, diverting, and tracing actions may be in standard message or telephonic format. At a minimum holding, diverting, and tracing requests and responses will:

- Identify the requesting or responding organization and provide a point of contact name and phone number.
- Specify the action being requested or taken.
- List the requisition number(s) and TCN(s) of the shipment units affected.

3.6 RECORD KEEPING

The transshipper and the consignee maintain records detailing the actions undertaken. These records include copies of correspondence shipment documentation and/or transaction set received and/or transmitted. DoD component publications detail the length of time and method for keeping such records.

DISTRIBUTION OF OCEAN CARGO DOCUMENTATION

This figure provides distribution instructions for the stow plan, cargo traffic message, manifest, recapitulation & summary. Manifest adjustments are sent to the same addressees as the original manifest. This figure must be used in conjunction with figure 3-2 which explains the letter codes used in the distribution method and remarks columns.

Distribution to:	Cargo Stow Plan			Cargo Traffic Message			Cargo Manifest and Recapitulation			Cargo Manifest Summary		
	No. of copies	Dist. Method	Remarks	No. of copies	Dist. Method	Remarks	No. of copies	Dist. Method	Remarks	No. of copies	Dist. Method	Remarks
For all cargo: Commanding Officer or Master of the Ship	3	V					3	V	A,G			
POD and next port of call	3	X		1	E	C,D	6	X	B,C,L	6	M	C

EXPLANATION OF DISTRIBUTION METHOD AND REMARKS CODES USED IN FIGURE 3-1

A. Distribution Method codes:

Code	Definition
E	Electronic transmission
H	Hand delivery
M	Regular mail
V	On the ship carrying the cargo
X	By fastest means possible following ship departure

B. Remarks codes:

Code	Definition
A	Ship papers may be substituted
B	When prepared manually, the loading port distributes advanced hard copy manifest data. When manifests are transceived, the receiver distributes advance hard copy manifest data. For CONUS loading, MTMC distributes hard copy in addition to transceived manifest data to the overseas Army and Navy activities listed below. Any changes in hard copy requirements will be referred to MTMC.
Army POD	Navy POD
Bangkok, Thailand	NAVSTA Roosevelt Roads, Puerto Rico
Sattahip, Thailand	NSA Naples, Italy
Vayama, Thailand	NAVSTA Argentia, Newfoundland
Manila, Philippines	NAVSTA Guantanamo Bay, Cuba
Inchon, Korea	
Chinhae, Korea	
Pusan, Korea	
C	For PODs or agencies listed below, forward by distribution method X, the number of copies indicated.
	Chief, MILTAG, Indonesia - 15 copies
	JUSTMAG, Thailand - 15 copies
	MTMC UK Terminal - 3 copies
	MAG or Mission, Turkey - 6 copies of recapitulation and 2 copies of stow plan

Figure 3-2

EXPLANATION OF DISTRIBUTION METHOD AND REMARKS CODES USED IN FIGURE 3-1	
C	For all shipments to PODs JF_ (Germany), JG_ (Netherlands), JH_ (Belgium), and JM_ (Rhine River, forward one additional manifest and cargo traffic message, by electronic transmission, to HQ, 4th TRANSCOM, Oberursel, Germany.)
C	For all shipments to PODs in Turkey, forward 12 copies of the manifest by mail to the responsible Turkish OCCA. Also, forward a copy of the manifest by electronic transmission to DET 2 39 WG ANKARA TU// LGT//. On all Atlantic, Gulf, or European sailings, manifests will be sent not later than 72 hours after ship departure.
C	For all Navy-sponsored FMS shipments of arms, ammunition, and explosives, and RUs of inert component parts, send one copy of the manifest to U.S. Navy ILCO, Code 252, 700 Robbins Avenue, Philadelphia, PA 19111-5000.
C	For cargo consigned to JUSMAG Spain/U.S. Navy resident Officer-in-Charge of Construction, forward one copy to OINCC, Contracts, Naval Facility Engineering Command, Spain.
C	For all export shipments of Navy ammunition containing N, M, P, R, V, or Z as the first digit of the TCN, forward one copy of the manifest to the Ships Parts Control Center, Code 8534, P.O. Box 2020, Mechanicsburg, PA 17055-0788.
C	For shipments of Army ammunition to Pacific PODs, forward one copy of the Manifest to Central Ammunition Management Office - Pacific, ATTN: SARCA-OP, Ft Shafter, HI.
C	For shipments of all ammunition to central European and UK area PODs, forward a copy of the manifest to CDR 200th TAMMC, Zweibruecken, Germany.
C	For all shipments destined to Korea, forward a copy of the manifest to 25th Transportation Group, Korea.
D	Send one copy to MTMC Field Office - Pacific (for PACOM loading and discharge).
D	Send one copy to MSC Office Honolulu for cargo destined to consignees in CINCPAC area.
D	For shipments of Army ammunition to Pacific area PODs, forward a copy of the CTM to Central Ammunition Management Office - Pacific, Ft Shafter, HI.
D	For shipments of Navy ammunition to Pacific area PODs, forward one copy to COMSERVPAC.
Figure 3-2 (cont)	

EXPLANATION OF DISTRIBUTION METHOD AND REMARKS CODES USED IN FIGURE 3-1

E	MAAG copy for shipments to Taipei not required.
F	Provide ocean cargo manifest data to COMSC by electronic transmission. Activities without electronic transmission capability forward hard copy manifests to MSC Area Commands, but not to COMSC Headquarters.
G	Provide five copies of the manifest to Masters of USNS and time charter vessels (terms of carriage codes 1 or 8) loading cargo overseas for discharge in CONUS.
I	For hazardous cargo shipments on MSC controlled ships to PODs: H__ (British Isles), J__ (Northern Europe), K__ (Western Mediterranean), and L__ (Eastern Mediterranean), forward one copy of the complete hazardous cargo portion of the ocean cargo manifest to facilitate overseas port clearance of controlled vessels.
K	Forward manifest data to Marine Corps Logistics Base, Albany, GA. If manifests are prepared manually, mail a copy of the Marine Corps section as soon as possible.
L	When cargo manifest documents cannot be transmitted to CONUS PODs by electronic means, use appropriate mailing address from the following list:

(cont.)**

MANIFEST TRANSMISSION TIME STANDARDS	
If transit time to the POD is:	The manifest is forwarded within:
7 days or less	72 hours of ship sailing from the POE
8 days or more	5 days of ship sailing from the POE

Figure 3-3

CARGO TRAFFIC MESSAGE TRANSMISSION TIME STANDARDS	
When the ship transit time is:	The cargo traffic message is sent within:
0 to 72 hours	24 consecutive hours
4 to 11 days	48 consecutive hours
12 days and over	3 workdays

Figure 3-4

CARGO OUTTURN ADVISORY AND RECONCILIATION MESSAGE

Data requirements for the CORM are listed below:

From: Ship unloading activity (POD)
To: Activity responsible for the POE
MSC area/subarea command of the POE or the MTMC area command for CONUS loaded cargo
Info: Activity responsible for each port of call booking office that booked the cargo
Subject: Cargo Outturn Advisory and Reconciliation Message

1. Part 1 - Advisory

2. Enter the POD in code and clear text as well as the dates of ship arrival and discharge completion. If cargo has been diverted from another port, indicate the port from which it was diverted following the unloading date. For example:

POD - JF1 BREMERHAVEN - 24 JUNE 1993 - 26 JUNE 1993

POD - JF1 BREMERHAVEN - 24 JUNE 1993 - 26 JUNE 1993 -
Diverted from JG1 Rotterdam

3. Enter name, voyage number, and vessel status/terms of carriage for the ship on which the cargo is manifested. If the cargo is received on a different ship, indicate the delivering ship in parentheses following the basic entry. For example:

SS NEVERSINK - A1234 - 61 (SS LEAKS ALOT)

4. Enter an indicator of manifest receipt, the number of supplements received, and the ocean bill of lading number, if applicable. For example:

MANIFEST RECEIVED - NO SUPPLEMENTS

MANIFEST AND SUPPLEMENT 1 RECEIVED - GBL X7654321

5. Determine the agency responsible for each unloading element:

- a. The agency that unloaded the cargo
- b. The agency responsible for unloading costs
- c. The agency responsible for paying port charges

Figure 3-5

1 INTRODUCTION

1.1 GENERAL

This volume provides DoD standard procedures and EDI conventions for the interchange of post award contract data using ANSI ASC X12 transactions. In the future, this volume may also provide the standard procedures and EDI convention standards for various phases of the acquisition process from solicitation through contract reporting and contractor history.

Use of this volume requires simultaneous access to volume 1. Volume 1 contains the full Table of Contents for the manual; the only listings of Acronyms and Abbreviations, Definitions, and References for the manual; instructions for acquiring access to the DLMS standards database; specific guidance that applies to all implementation conventions; and both functional and technical information that is relatively stable and applies to the DLMS as a whole. Volume 1, paragraph 10.1.7, explains the use of the LQ data segment to identify the unique DoD code lists and the specific codes that apply to the transaction.

1.2 POLICY

The FAR and the DFARS provide the DoD policies governing procedures in this volume.

1.3 APPLICABILITY

These procedures apply to the Office of the Secretary of Defense, Military Departments, Joint Staff, Unified and Special Commands, Defense Agencies, and Defense Organizations (hereafter referred to collectively as "DoD Components") and, by agreement, to other organizations participating in the DLMS.

1.4 ACQUISITION PRC

The Acquisition PRC is the forum through which the DoD Components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of acquisition requirements for the DLMS. The Chairman, Acquisition PRC, in coordination with the Acquisition PRC representatives, is responsible for the contents of this volume of the DLMS. Representatives to the Acquisition PRC are identified in appendix 1A. Refer to volume 1, chapter 1, for a discussion of DLMS PRC functions and responsibilities.

1.5 NONCOMPLIANCE

If reasonable attempts to obtain compliance with prescribed procedures or if resolutions to related problems are unsatisfactory, the activity having the problem should request assistance from its Service/Agency Acquisition PRC member. To the extent possible, the request should include information and copies of all correspondence pertinent to the problem; including the contract number, the number and date of the transaction involved, and identification of the other office. The PRC member will take the necessary actions to resolve the issue or problem. These actions may include requesting assistance from the Acquisition PRC chairman.

2 ABSTRACTS OF CONTRACTS

2.1 GENERAL

This chapter provides uniform procedures for the preparation and use of contract abstracts including the individual data elements, codes, data segments, and the transaction set.

The basic contract abstract contains the essential data from the contract that is required to establish the data base to manage the contract. It is comprised of a series of data segments in TS 561 IC - Contract Abstract. The abstract contains key elements of administrative, line item, and delivery data extracted from contractual documents into an electronically processable format.

TS 561 IC - Contract Abstract permits a uniform interchange of data between and among the Services/Agency, thereby producing greater accuracy of data in contract files and more reliable management products. This procedure will not be used for electronic (i.e., paperless) awards.

2.2 ABSTRACT OBJECTIVE AND USES

Ideally, the contract abstract is system generated from the contract data in the data base. Simultaneously with the preparation of the contractual document, the computer prepares the abstract.

The abstract data are processed electronically and are used by the PO or IM in support of due-in assets systems; procurement status and history files; supply status reporting; the supply advanced receipt information system; finance and accounting records; and management statistics.

CAOs use the abstract data in support of master contract file records; suspense for receipt of hard copy documents; work assignments in property administration, production, quality assurance, and transportation; and management statistics. The DFAS uses the abstract data in the examination of vouchers.

2.3 INCLUSIONS AND EXCLUSIONS

The procurement instruments to be abstracted are contracts, purchase orders, delivery orders, and calls. (The term "contract" is used throughout this chapter to convey this all inclusiveness.) Exhibits related to any of the aforementioned are also referenced in the abstract.

Those contractual procurement instruments excluded from the abstracting process are basic ordering agreements, blanket purchase agreements, and indefinite delivery contracts. Information from these instruments required for internal systems may be extracted locally, as necessary.

2.4 CONTRACTUAL DOCUMENTS

The contractual documents about which elements of data are abstracted include the DD Form 1155, Order for Supplies or Services; SF 26, Award/Contract; SF 33, Solicitation, Offer, and Award (when used as an award); OF 336, Continuation Sheet; and SF 30, Amendment of Solicitation/Modification of Contract, as applicable.

2.5 INITIATION AND DISTRIBUTION OF CONTRACTS AND ABSTRACTS

The PO will prepare contracts in accordance with the FAR and the DFARS instructions and will provide copies thereof to the CAO in accordance with distribution instructions in the FAR, section 4.2, and DFARS, section 204.2.

The office issuing the hard copy contract is responsible for preparing, validating, and transmitting the abstract to the contract abstract recipient ADP point. For contracts issued by a PO, the contract abstract recipient is always the primary CAO activity reflected in the "Administered By" block, as modified, of the basic contract. When authority has been assigned to the CAO to issue calls or orders, the abstract recipient is the activity (PO, IM, or PM) which authorized the CAO to issue the contract. It is the responsibility of the office delegating PO responsibility to a CAO (i.e., authorizing the CAO to issue calls/orders) to indicate in the letter of delegation both the abstract recipient and the PO, IM, or PM who is to receive the DLMS delivery transactions.

Abstracts will be forwarded within two workdays after contract execution without awaiting the reproduction and distribution of the hard copy.

When the contract contains abstract data elements that are classified, these data elements will not be abstracted. Only the unclassified data will be transmitted in the abstract. A Transaction Status Indicator code will indicate "partial abstract - see contract." The contract containing the classified data will be forwarded in accordance with existing security regulations.

2.6 STRUCTURE OF THE CONTRACT ABSTRACT

The details of the initial abstract of the contract, TS 561 IC - Contract Abstract, are shown at appendix 2A.

The abstract consists of loops within loops representing three levels of contract data in table 2. An HL data segment identifies each loop as described below:

- The first HL loop carries administrative data, i.e., data that applies to the entire contract. This loop may also carry other data that is common to the contract.
- One HL loop for each accounting line carries the accounting classification data applicable to the contract. Each of these loops relates back to the administrative data loop for that contract.
 - The ACRN is a two-position alphanumeric control code assigned (in accordance with DFARS, section 204.7107) to each accounting classification used in a single contract. The ACRN appears as a detached prefix to the accounting classification on the contract. The ACRN associates the accounting classification data with the line and schedule data to which it applies. The control fields for accounting classification data are ACRN within PIIN. All dollar figures are in U.S. dollars.
 - When the paying office requires identification of long line accounting data that is not related to a CLIN or an ELIN, this data must be furnished in a separate HL loop. If the contract authorizes contingent services for which the contractor may be reimbursed and no CLIN/ELIN is established, a Special Reimbursable Provision code will be included. If an amount has been obligated for these contingencies (i.e., not a variance), it will be included with the amount for the line item also chargeable to the accounting classification.

- Line item data is specific data that applies to an individual line or subline in the contract. There will be a separate HL loop for each line or subline. The data applicable to a specific line or subline will be carried in an individual HL loop that is related back to the HL loop carrying the long line accounting data for that line. Supplies and services lines are treated the same and are distinguishable by the data contained in the loop. When the line or subline includes a schedule of deliveries, the schedule data is nested in loops at the end of the line loop.
 - A supplies line loop includes, as applicable, the line item number, the ACRN, the quantity, unit price and total amount of the line/subline, variation in quantity, stock number and/or the requisition number, description of the services, place of inspection and acceptance, and the ship-to and mark-for. The control fields for a supplies line are PIIN, call/order number, and CLIN/ELIN.
 - A services line includes a description of the services and a completion date. The control fields for a services line item are PIIN, call/order number, CLIN/ELIN, ACRN, and the services completion date.
 - Some examples of a services line item are engineering services; research and development services; training services; DD Form 1423, Contract Data Requirements List, data items; and testing services.
 - Services line items normally cover one lot of services at one location (delivery destination) and are to be paid for as one lot.
 - When the services being procured are to be accomplished at several locations and/or payment is on the basis of the level of effort (e.g., hours expended per month), such information is carried in nested loops of schedule data at the end of the line for each unit of services against which payments are to be made.
 - An HL loop also carries nonCLIN data and relates it back to the HL loop carrying the funding data for that line.
 - For those contract line items that do nothing more than reference an exhibit in the contract, only limited line item data is furnished.
 - For those CLINs or ELINs which do contain sublines, the following applies:
 - Contract and exhibit subline items that reflect a numeric suffix are for informational purposes only and are not included in the abstract.
 - Contract and exhibit subline items that bear an alphabetic suffix are for separate reporting; therefore, when the contract contains CLIN or ELIN sublines, the applicable HL loop is at the subline level. The associated contract or exhibit line serves only as a common denominator for the accumulation of management data by the procuring activity. No data is transmitted for this associated contract or exhibit line item.
 - For exhibit line and subline items on DD Form 1423, data is created only if the DD Form 1423 indicated that a DD Form 250 is required.

2.7 PREPARATION OF THE CONTRACT ABSTRACT TRANSACTION

Use TS 561 IC - Contract Abstract (appendix 2A) for initial contract abstracts.

- The term "contract abstract" as used here includes an abstract of an original contract, an abstract of a contract modification, and an error correction transaction. Each of these can be identified by the inclusion, or exclusion when appropriate, of a Transaction Status Indicator code.
- Any number of contract abstracts, going to the same ADP point may be included in the same transaction set.
- The transaction set contains three tables.
 - Table 1 identifies the CAO, the PO, and usually the recipient ADP point in iterations of data segment N1.
 - Table 2 identifies the contract data in HL loops. Multiple contracts may be included in the same transaction set.
 - The absence of a Transaction Status Indicator code in this transaction distinguishes it from other types of abstracts and identifies it as an initial contract abstract.
 - There is a contract HL loop for the administrative data that applies to the whole contract. This loop includes the contract number, discount terms, paying office, common codes, etc.
 - There is a billing agreement HL loop for each funding line in the contract. This loop includes the ACRN, the long line accounting data, the dollar amount chargeable to that accounting data, the special reimbursable codes, etc. The HL data segment includes a reference back to the contract HL loop.
 - There is an item HL loop for each line or subline in the contract. While in most cases this loop identifies data pertinent to the line item, in some cases there may be an item HL loop with nonCLIN data. The HL data segment includes a reference back to the billing agreement HL loop to which the line is related.
 - When the line or subline data is further subdivided, i.e., when there is a schedule of more than one ship-to, mark-for, delivery date, or requisitioner number, the subquantities and related data are nested in iterations of the schedule loop at the end of the item loop. The quantities for the various schedule iterations should add up to the quantity for the line.
 - Table 3 is the usual transaction set trailer.

2.8 ACKNOWLEDGMENTS

Both a contract abstract and a contract abstract cancellation require an acknowledgment response. When the abstract recipient receives a contract abstract or an abstract cancellation, it must return an acknowledgment transaction to the initiator of the abstract. The acknowledgment is a TS 561 IC - Contract Abstract with the appropriate Transaction Status Indicator code. The acknowledgment serves to confirm receipt of the contract abstract or receipt of the abstract cancellation by the recipient and must be transmitted within five workdays from abstract or cancellation submission date. Confirmations not received within seven workdays may be subject to follow-up via message, advising that the acknowledgment has not been received for the specified contract number.

The CAO must ensure that the contract data has been cancelled from its data base before it issues a cancellation acknowledgment. The PO must receive the cancellation acknowledgment before it issues a new abstract.

2.9 PREPARATION OF ACKNOWLEDGMENT TRANSACTION

Use TS 561 IC - Contract Abstract (appendix 2A) for acknowledgments.

- Acknowledgments may be included in table 2 of the same transaction set with other abstracts going to the same ADP point. The Transaction Status Indicator code in the contract data loop identifies an abstract or a cancellation acknowledgment .
- The transaction set contains three tables.
 - .. Table 1 identifies the CAO, the PO, and the recipient ADP point in data segment N1.
 - .. Table 2 identifies the acknowledgment data in an HL loop.
 - ... There is an HL loop for each contract . The loop identifies the contract number and, with a Transaction Status Indicator code, the type of acknowledgment.
 - .. Table 3 is the usual transaction set trailer.

2.10 CANCELLATIONS

A previously submitted TS 561 IC - Contract Abstract may be cancelled either when the contract is cancelled or when the data entries are erroneous to the extent that the abstract originator desires to start over. When an abstract is to be cancelled, the abstract initiator sends a TS 561 IC - Contract Abstract, with a Transaction Status Indicator code K, to identify the cancellation.

- This method does not apply to contract modifications and can be initiated only by the originator of the abstract.
- Internal procedures will be utilized to back the related abstract data out of the applicable internal systems.

- The recipient of the request for canceling an abstract will acknowledge receipt of the cancellation, as described in section 2.8 above, after the original abstract has been deleted from their files. The abstract initiator must receive the cancellation acknowledgment before issuing a new abstract.

2.11 PREPARATION OF THE CANCELLATION TRANSACTION

Use TS 561 IC - Contract Abstract (appendix 2A) for cancellations.

- Cancellations may be included in table 2 of the same transaction set with other abstracts going to the same ADP point. The Transaction Status Indicator code K in the contract level HL loop identifies that it is a cancellation abstract.
- The transaction set contains three tables.
 - Table 1 identifies the CAO, the PO, and the recipient ADP point in data segment N1.
 - Table 2 identifies the cancellation data in an HL loop.
 - There is an HL loop for each contract. The loop identifies the contract number and, with a Transaction Status Indicator code, that it is a cancellation.
 - Table 3 is the usual transaction set trailer.

APPENDIX 2A

**TRANSACTION SET 561 IMPLEMENTATION CONVENTION
CONTRACT ABSTRACT**

561 Contract Abstract

This Draft Standard for Trial Use contains the format and establishes the data contents of the Contract Abstract Transaction Set (561) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to abstract a new contract, abstract a change in terms of a previously abstracted contract, or to correct a previously transmitted abstract. This bi-directional transaction set includes the information necessary to administer a contract, including modifications and corrections to that contract, and provides an acknowledgment mechanism to enable management of the contract administration process. This transaction set is typically used internally within a business entity as a post-award management report, when the purchasing and contract administration functions are separated within that entity.

Implementation Notes

1. POs and CAOs use this transaction set to exchange contract data, including contract data exchanges with IMs and PMs.
2. Use a single occurrence of this transaction set to transmit abstracts, corrections, cancellations, or receipt acknowledgments of previously transmitted contract abstract actions or cancellations.
3. Use a single occurrence of this transaction set to transmit one or more abstract actions (e.g., contract abstract, modification abstract, correction, cancellation, or acknowledgment).
4. Use a single occurrence of this transaction set to transmit one or more abstract actions from one originating party to one or more abstract recipient ADP points.

NOTES/COMMENTS:

- 1/040** The LM loop identifies industry code data unique to the transaction set.
- 1/060** The N1 loop carries address information such as the purchasing party and the contract administration office.
- 2/020** The CS segment carries the details of a specific contract.
- 2/090** To carry the percent variation in quantity over and under for a specified deliverable quantity of an item.
- 2/160** The N1 loop carries address information about the contractor, paying office, accounting station, and inventory control point.
- 2/220** The N1 loop carries address information for each delivery location.
- 3/010** CTT01 is the number of iterations of HL segment. If used, hash total (CTT02) is the sum of the number of items ordered (PO102) for each PO1 segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: ____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Mandatory	BGN02	127	Reference Number	M	AN 1/30																																																																																												
		Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.																																																																																															
		Implementation Note: Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.																																																																																															
Mandatory	BGN03	373	Date	M	DT 6/6																																																																																												
		Date (YYMMDD).																																																																																															
		Implementation Note: Express the originating activity's date of transaction set preparation in GMT.																																																																																															
Required	BGN04	337	Time	C	TM 4/8																																																																																												
		Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)																																																																																															
		Implementation Notes: 1. Express the originating activity's time of transaction set preparation in GMT. 2. Express time in a four-position (HHMM) format.																																																																																															
Not Used	BGN05	623	Time Code	O	ID 2/2																																																																																												
Not Used	BGN06	127	Reference Number	O	AN 1/30																																																																																												

Required	BGN07 640 Transaction Type Code Code specifying the type of transaction.	O ID 2/2
----------	---	--------------

Implementation Note:

Use when the transaction set contains one or more contract abstracts, regardless of the type of contract abstract.

U1 Contract Abstract

Code Value Implementation Note:

Use when a transaction set contains contract abstract data. Provide transaction status in an occurrence of the 2/LM/140 loop, when the abstract action is other than a contract abstract.

Not Used	BGN08 306 Action Code	O ID 1/2
----------	-----------------------------	--------------

Optional

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/040 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g. 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/140 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. The code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ/040 that does not apply to all the table 2 iterations. (Code subject to override: 0.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: **LQ** Industry Code

Level: Header

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: **C0102** — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list	O	ID	1/3
			0 Document Identification Code			
Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Required

Segment: N1 Name
Level: Header
Loop: N1 **Repeat:** >1
Usage: Optional
Max Use: 1
Purpose: To identify a party by type of organization, name and code
Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.
Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.
Implementation Note:
The 1/N1/060 loop will, as a minimum, cite the organizations originating and receiving the transaction set.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	M ID 2/2
			Implementation Note: Use to identify either the PO or CAO originating the abstract action, and the ADP point of the party receiving the abstract action.	
			C4 Contract Administration Office Code Value Implementation Note: Must use in contract, modification, and correction abstracts to identify a CAO. Do not use in other abstracts.	
			CJ Automated Data Processing (ADP) Point Code Value Implementation Note: Use in all abstracts to identify the ADP point of a PO, CAO, or other party receiving the abstract action.	
			QB Purchase Service Provider Code Value Implementation Note: Use to identify the PO originating an abstract action.	
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC)	C ID 1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20

Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code	O	ID	2/2

Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/060 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** >1

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. Iterations of the 2/HL/010 loop provide abstract transaction data structured in a hierarchical logic consisting of: contract, financial, and line item information.

2. Use the first iteration as the contract loop, to provide abstract information common to all line items. Use the second and, if applicable, subsequent loop iterations as the line item loop. Repeat the contract and line item loops, as necessary, to identify additional abstract actions in the same transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number	O AN 1/12
			Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	
			Implementation Notes:	
			1. Do not use in 2/HL/010 contract loops. Use in 2/HL/010 financial and line item loops to identify the contract loop associated with each financial loop and line item.	
			2. Cite the sequential serial number assigned in HL01 of the 2/HL/010 contract loop to identify the financial information and line item associated with the contract loop. Citing the applicable information in this fashion provides a cross-reference for all contract, financial, and line item information contained in the contract abstract transaction set.	
Mandatory	HL03	735	Hierarchical Level Code	M ID 1/2
			Code defining the characteristic of a level in a hierarchical structure.	
			2 Billing Arrangement	
			Code Value Implementation Note:	
			Use to identify the individual financial loops.	
			I Item	
			Code Value Implementation Note:	
			Use to identify the individual line item loops.	
			IB Contract	
			Code Value Implementation Note:	
			Use to identify the individual contract loops.	
Not Used	HL04	736	Hierarchical Child Code	O ID 1/1

Required

Segment: CS Contract Summary

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

Semantic: 1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.

2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.

3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.

4. CS14 is the Unit of Measure stipulated in the contract.

5. CS15 is the contract line item number (CLIN) unit price specified in the contract.

6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.

7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

Comments: 1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).

2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Note:

Use in 2/HL/010 contract loops to identify the contract number, i.e., PIIN, and the call or order number or the call or order number including the respective call or order modification, i.e., SPIIN, if applicable.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the PIIN contract number of the contract or order.

Optional

CS02	327	Change Order Sequence Number Number assigned by the orderer identifying a specific change or revision to a previously transmitted transaction set.	O AN 1/8
------	-----	---	----------

Implementation Note:

Must use in modification abstracts to identify a SPIIN six-position modification number to the cited contract.
Do not use in other abstracts.

Optional	CS03	328	Release Number	O	AN	1/30
			Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.			
			Implementation Note:			
			Use as needed to identify either a SPIIN four-position call/order number and when applicable its two-position modification number.			
Not Used	CS04	128	Reference Number Qualifier	C	ID	2/2
Not Used	CS05	127	Reference Number	C	AN	1/30
Not Used	CS06	324	Purchase Order Number	O	AN	1/22
Not Used	CS07	560	Special Services Code	O	ID	2/10
Not Used	CS08	433	F.O.B. Point Code	O	ID	2/2

Not Used	CS13	560	Special Services Code	O	ID	2/10
Not Used	CS14	355	Unit or Basis for Measurement Code	O	ID	2/2
Not Used	CS15	212	Unit Price	O	R	1/17
Not Used	CS16	336	Terms Type Code	O	ID	2/2
Not Used	CS17	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	CS18	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: G62 Date/Time

Level: Detail

Loop: HL

Usage: Optional

Max Use: 2

Purpose: To specify pertinent dates and times

- Syntax:**
1. R0103 — At least one of G6201 or G6203 is required.
 2. P0102 — If either G6201 or G6202 is present, then the other is required.
 3. P0304 — If either G6203 or G6204 is present, then the other is required.

Implementation Notes:

1. Use as applicable in 2/HL/010 contract loops to identify effective, order, signature, and modification dates when the same date applies to all line items cited in 2/HL/010 line item loops. Use in 2/HL/010 line item loops to identify a date when the date varies for even one line item.
2. Use as needed in 2/HL/010 line item loops to carry either actual or estimated delivery, or performance dates applicable to the cited line item.
3. Use 2/LM/140 loops to identify undefinitized dates.
4. Use the 2/SCH/210 loop to identify actual or estimated multiple delivery or performance dates for a cited line item.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
G6201	432	Date Qualifier Code specifying type of date.	C ID 2/2

Implementation Note:

Use one of codes 04 or 07 to identify the order or effective date. Use one of codes 70 or 17 to identify either the actual or estimated delivery schedule date. Use one of codes KA or 17 to identify the actual or estimated service completion date. Use only one delivery schedule or service completion date in any one 2/HL/010 loop iteration.

04 Purchase Order Date

Code Value Implementation Note:

Use as needed in contract abstracts to identify the date of the contract or order. Use in modification and correction abstracts only when there is a change to the original contract or order date. Do not use in other abstracts. Do not use when using code 07.

07 Effective Date

Code Value Implementation Note:

Use as needed in contract abstracts to identify the effective date of the contract or order. Use as needed in modification and abstracts only to identify changes in the original effective date. Do not use in other abstracts. Do not use if using code 04.

17 Estimated Delivery Date

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to identify either the estimated delivery date. Do not use when using any of codes 70, BO, or KA. Do not use in other abstracts.

70 Scheduled Delivery Date**Code Value Implementation Note:**

Use as needed in contract, modification, and correction abstracts, to identify the actual contract delivery schedule date. Do not use when using either code 17 or code KA. Do not use in other abstracts.

85 Date Issued**Code Value Implementation Note:**

Must use in modification abstracts to identify the effective date of the modification. Use as needed in correction abstracts. Do not use in other abstracts.

BO Estimated Contract Completion**Code Value Implementation Note:**

Use as needed in contract, modification, and correction abstracts, to identify either the estimated service completion date. Do not use when using any of codes 17, 70 or KA. Do not use in other abstracts.

BV Recorded**Code Value Implementation Note:**

Must use in modification abstracts, to identify the date of signature of a modification. Use as needed in correction abstracts. Do not use in other abstracts.

BW Signature**Code Value Implementation Note:**

Must use in contract abstracts, to identify the date of signature (award) of a contract or order. Use as needed in correction abstracts only to note a correction to the original signature date. Do not use in other abstracts.

KA Scheduled Service Completion**Code Value Implementation Note:**

Use as needed in contract, modification, and correction abstracts, to identify the actual contract service completion schedule date. Do not use when using either code 17 or code 70. Do not use in other abstracts.

Required	G6202	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	G6203	176	Time Qualifier	C	ID	1/2
Not Used	G6204	337	Time	C	TM	4/8
Not Used	G6205	623	Time Code	O	ID	2/2
Not Used	G6206	624	Century	O	N0	2/2

Optional

Segment: ITD Terms of Sale/Deferred Terms of Sale

Level: Detail

Loop: HL

Usage: Optional

Max Use: 5

Purpose: To specify terms of sale.

Syntax:

1. L03040513 — If ITD03 is present, then at least one of ITD04, ITD05 or ITD13 are required.
2. L08040513 — If ITD08 is present, then at least one of ITD04, ITD05 or ITD13 are required.
3. L091011 — If ITD09 is present, then at least one of ITD10 or ITD11 are required.

Semantic: ITD15 is the percentage applied to a base amount used to determine a late payment charge.

Comment: If the code in ITD01 is 04, then ITD07 or ITD09 is required and either ITD10 or ITD11 is required; if the code in ITD01 is 05, then ITD06 or ITD07 is required.

Implementation Notes:

1. Use as needed in 2/HL/010 contract loops to identify the discount terms, if applicable to the cited contract, when the same terms apply to all line items cited in 2/HL/010 line item loops. Use as needed in 2/HL/010 line item loops to identify the discount terms, if applicable, when the discount varies for even one line item.
2. Use only when discount terms apply.
3. Use in 2/HL/010 contract or line item loops to express multiple discounts, if applicable.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	ITD01	336	Terms Type Code Code identifying type of payment terms.	O	ID	2/2
			06 Mixed			
			Code Value Implementation Note: Use as needed to indicate the cited contract contains additional discount terms.			
Not Used	ITD02	333	Terms Basis Date Code	O	ID	1/2
Optional	ITD03	338	Terms Discount Percent Terms discount percentage, expressed as a percent, available to the purchaser if an invoice is paid on or before the Terms Discount Due Date.	O	R	1/6
Not Used	ITD04	370	Terms Discount Due Date	C	DT	6/6
Conditional	ITD05	351	Terms Discount Days Due Number of days in the terms discount period by which payment is due if terms discount is earned.	C	NO	1/3
Not Used	ITD06	446	Terms Net Due Date	O	DT	6/6

Optional	ITD07	386	Terms Net Days	O	N0	1/3
			Number of days until total invoice amount is due (discount not applicable).			
	Implementation Note:					
	<i>Use only if net days are specified in the contract.</i>					
Not Used	ITD08	362	Terms Discount Amount	O	N2	1/10
Not Used	ITD09	388	Terms Deferred Due Date	O	DT	6/6
Not Used	ITD10	389	Deferred Amount Due	C	N2	1/10
Not Used	ITD11	342	Percent of Invoice Payable	C	R	1/5
Not Used	ITD12	352	Description	O	AN	1/80
Not Used	ITD13	765	Day of Month	C	N0	1/2
Not Used	ITD14	107	Payment Method Code	O	ID	1/1
Not Used	ITD15	954	Percent	O	R	1/10

Optional

Segment: PO1 Baseline Item Data

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To specify basic and most frequently used line item data

- Syntax:**
1. C0302 — If PO103 is present, then PO102 is required.
 2. C0504 — If PO105 is present, then PO104 is required.
 3. P0607 — If either PO106 or PO107 is present, then the other is required.
 4. P0809 — If either PO108 or PO109 is present, then the other is required.
 5. P1011 — If either PO110 or PO111 is present, then the other is required.
 6. P1213 — If either PO112 or PO113 is present, then the other is required.
 7. P1415 — If either PO114 or PO115 is present, then the other is required.
 8. P1617 — If either PO116 or PO117 is present, then the other is required.
 9. P1819 — If either PO118 or PO119 is present, then the other is required.
 10. P2021 — If either PO120 or PO121 is present, then the other is required.
 11. P2223 — If either PO122 or PO123 is present, then the other is required.
 12. P2425 — If either PO124 or PO125 is present, then the other is required.

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. PO101 is the line item identification
 3. PO106 through PO125 provide for ten (10) different product/service ID's per each item. For example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use only in 2/HL/010 line item loops to identify a line item and its associated price, quantity, and delivery data. Use the 2/SCH/210 loop to identify the price, quantity, and delivery data, when there is a delivery schedule associated with the cited line item.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

3. Use up to four 235/234 pairs to identify a supply line item stock number, part number, CAGE code, and description.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	PO101	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O AN 1/11
			Implementation Note: Use in contract abstracts, to identify the CLIN, the CLIN including a SUBCLIN, or ELIN, as applicable. Use as needed in modification and correction abstracts. Do not use in other abstracts.	
Conditional	PO102	330	Quantity Ordered Quantity ordered.	C R 1/9
			Implementation Notes: 1. Use as needed in contract abstracts, to identify the total quantity on order for a cited CLIN, SUBCLIN, or ELIN. Do not use when either the quantity is unknown or an exhibit line item is cited. Use as needed in modification and correction abstracts. Do not use in other abstracts. 2. A minus (-) sign precedes a decrease. 3. Use transaction status in 2/LM/140 loops to identify estimated quantities. 4. Express as a whole number with no decimals, for example, if the quantity is 20, cite only 20.	
Optional	PO103	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	O ID 2/2
			Implementation Note: Use as needed in contract, modification, and correction abstracts, to identify the purchase unit for the order quantity. (See the unit of issue conversion table in volume 1, chapter 10). Do not use when either the quantity is unknown or an exhibit line item is cited. Do not use in other abstracts.	
Conditional	PO104	212	Unit Price Price per unit of product, service, commodity, etc.	C R 1/17
			Implementation Note: Use as needed in contract, modification, and correction abstracts, to identify in dollars, cents, and mills, the unit price of the cited line item. Do not use if a unit price is not applicable to the cited line item. Do not use in other abstracts.	
Optional	PO105	639	Basis of Unit Price Code Code identifying the type of unit price for an item.	O ID 2/2
			Implementation Note: Use as needed in contract, modification, and correction abstracts, to identify either the actual or estimated unit price, or to indicate either a price to be furnished or no separate price. Do not use when either a unit price is not applicable or the mills in a unit price exceed two numbers. Do not use in other abstracts.	
			CT Contract Code Value Implementation Note: Use to identify an actual unit price.	
			ES Estimated Code Value Implementation Note: Use to identify an estimated unit price.	
			NC No Charge	

Conditional

Code Value Implementation Note:

Use to identify a unit not separately priced. When using, cite numeric 0 in PO104.

TB To be negotiated.

Code Value Implementation Note:

Use to identify an unavailable unit price to be furnished later. When using, cite the numeric 0 in PO104.

PO106	235	Product/Service ID Qualifier	C	ID	2/2
Code identifying the type/source of the descriptive number used in Product/Service ID (234).					

Implementation Note:

Must use one of codes PD or SV in contract abstracts, to provide a description of the material or service ordered. With code PD also use code FS when NSN is known. Use code MG with code ZB in contract abstracts, as applicable, to identify a manufacturer's part number and CAGE code; also must use Code FS when NSN is known. Also use only one of codes FS, SW, or RR in contract abstracts, to properly identify a material line item. Use as needed in modification and correction abstracts. Do not use in other abstracts.

FS National Stock Number

Code Value Implementation Note:

Must use as applicable in contract abstracts, when NSN is known. Use as needed in modification and correction abstracts. Do not use when the line item references an exhibit. Do not use in other abstracts.

MG Manufacturer's Part Number

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to identify the manufacturer's part number. When using, there must be an additional occurrence of a 235/234 pair citing code ZB to identify the manufacturer's CAGE code. Do not use in other abstracts.

PD Part Number Description

Code Value Implementation Note:

Must use in supply line item contract abstracts, includes noun followed by description of the item. Use as needed in modification and correction supply line item abstracts. Do not use in other abstracts. Do not use to describe a service.

RR Replacement Product No.

Code Value Implementation Note:

Must use in contract, modification, and correction abstracts identifying an undefinitized NSN which must be furnished prior to shipment. Cite the letter Z in the corresponding data element 234 of the pair. Do not use in other abstracts.

SV Service Rendered

Code Value Implementation Note:

Must use in service line item contract abstracts to describe the services ordered. Use as needed in modification and correction abstracts. Do not use in other abstracts. Do not use to describe a supply line item.

SW Stock Number

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts to identify a local stock number. Do not use when either code FS is cited in a 235/234 pair or the line item references an exhibit. Do not use in other abstracts.

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use in contract, modification, and correction abstracts, to identify a manufacturer's CAGE code only when a 235/234 pair cites code MG. Do not use in other abstracts.

Conditional	PO107	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
Conditional	PO108	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2
Conditional	PO109	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40

Optional

Segment: N9 Reference Number

Level: Detail

Loop: HL

Usage: Optional

Max Use: 10

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Notes:

1. Use as needed in 2/HL/010 contract loops to identify a DPAS priority rating, modification authority, transaction number and, if applicable, its associated suffix number when the same number applies to all line items cited in 2/HL/010 line item loops. Use as needed, in 2/HL/010 line item loops when the transaction number, suffix, or ACRN vary by line item.

2. Use 2/SCH/210 loops to identify ACRNs which vary by schedule.

3. Use as needed in 2/HL/010 line item loops to identify a CLIN establishing an ELIN.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N901	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2
		BB Authorization Number			
		Code Value Implementation Note: Use as needed in modification abstracts, to identify the modification authority. Do not use in other abstracts.			
		C7 Contract Line Item Number			
		Code Value Implementation Note: Use as needed in contract, modification, and correction abstracts, to identify CLIN (including the SUBCLIN, ELIN, or SUBELIN). Do not use in other abstracts.			
		DS Defense Priorities Allocation System (DPAS) Priority Rating			
		Code Value Implementation Note: Must use in contract abstracts, to identify a four or five-position DPAS rating. Use as needed in modification and correction abstracts. Do not use in other abstracts.			
		TN Transaction Reference Number			
		Code Value Implementation Note: Use as needed in contract, modification, and correction abstracts to identify the transaction number (the requisition number). Do not use in other abstracts. Use this 2/N9/070 segment only when a single requisition transaction number applies to all deliveries of the item. Where the more than one transaction number applies to a single line item use the 2/SCH11/210.			
		W8 Suffix			

Code Value Implementation Note:

Use in contract, modification, and correction abstracts to identify, if applicable, the suffix number associated with the transaction number. Do not use in other abstracts.

Required	N902	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Not Used	N903	369	Free-form Description	C	AN	1/45
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Optional

Segment: AMT Monetary Amount

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To indicate the total monetary amount.

Implementation Notes:

1. Use as needed in 2/HL/010 contract loops to identify in dollars and cents, either the actual or estimated face value of the contract abstract. Show increases and decreases as net changes.
2. Use as needed in 2/HL/010 line item loops to identify in dollars and cents, either the actual or estimated total line item amount. Show increases and decreases as net changes.
3. Use as needed in 2/HL/010 contract and line item loops to identify an undefinitized amount.
4. Use as needed in 2/HL/010 contract and line item loops to identify a total contract or line item amount, but only when costs are involved.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
AMT01	522	Amount Qualifier Code Code to qualify amount	M ID 1/2

1 Line Item Total

Code Value Implementation Note:

Use as needed in 2/HL/010 line item loops in contract, modification, and correction abstracts, to identify the actual total line item amount. Do not use in other abstracts.

CT Contract

Code Value Implementation Note:

Must use in 2/HL/010 contract loops in contract abstracts, to identify the actual contract total amount. Use as needed in 2/HL/010 contract loops in modification and correction abstracts. Do not use in other abstracts.

KA Estimated Contract

Code Value Implementation Note:

Use as needed in 2/HL/010 contract and line item loops of contract abstracts, to identify either the estimated contract or line item total amount. Use as needed in modification and correction abstracts. Do not use in other abstracts.

KD Undefinitized

Code Value Implementation Note:

Use as needed in 2/HL/010 contract or line item loops in contract abstracts, to indicate an undefinitized amount. When using, insert the numeric 0 in AMT02. Use as needed in modification and correction abstracts. Do not use in other abstracts.

Mandatory

AMT02	782	Monetary Amount Monetary amount.	M R 1/15
-------	-----	-------------------------------------	----------

Implementation Note:

Value must be expressed in U.S. currency, i.e., dollars and cents with a decimal included.

Not Used

AMT03	478	Credit/Debit Flag Code	O ID 1/1
-------	-----	------------------------	----------

Optional

Segment: PCT Percent Amounts

Level: Detail

Loop: HL

Usage: Optional

Max Use: 2

Purpose: To qualify percent amounts, and supply percent amounts

Implementation Note:

Use as needed in 2/HL/010 contract loops to identify a variation in quantity when the same percentage applies to all line items cited in 2/HL/010 line item loops. Use in 2/HL/010 line item loops to identify a variation in quantity when the percentage varies by line item.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	PCT01	1004 Percent Qualifier Code to qualify percent. KA Variation in Quantity Over Code Value Implementation Note: Use as needed in contract, modification, and correction abstracts to identify an allowable percentage variation over a cited quantity. Do not use in other abstracts. KB Variation in Quantity Under Code Value Implementation Note: Use as needed in contract, modification, and correction abstracts, to identify an allowable percentage variation under a cited quantity. Do not use in other abstracts.	M	ID	1/2
Mandatory	PCT02	954 Percent Percentage expressed as a decimal	M	R	1/10

Implementation Note:

Cite the number as a decimal using a decimal point and no more than two places, e.g., .12 represents 12%.

Optional

Segment: AT Financial Accounting
Level: Detail
Loop: AT Repeat: >1
Usage: Optional
Max Use: 1
Purpose: To transmit financial accounting data
Syntax: C1001 — If AT10 is present, then AT01 is required.
Comment: AT09 identifies unique local activity financial accounting information

Implementation Note:
Use multiple repetitions, as needed, to identify the accounting classification dates associated with the ACRN cited in the 2/N9/130 in basic, modification, and correction abstracts. Do not use in other abstracts.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Notes:

1. Use the 2/LM/140 loop as needed in 2/HL/010 contract loops to identify DoD unique coded data when any specific code value applies to all line items cited in 2/HL/010 line item loops. Use the 2/LM/140 loop in 2/HL/010 financial loops to identify special reimbursable provisions. Use the 2/LM/140 loop in 2/HL/010 line item loops to identify DoD coded data, when a code value varies by line item.
2. For any specific table 2 iteration, use this 2/LM/140 loop as needed 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/040 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/040 loop with a different DoD code in the 2/LM/140 loop when the same LQ01 qualifier is used in both loops but the LQ02 DoD code is different. (Code subject to override: 0)

Data Element Summary

Mandatory

Segment: LQ Industry Code

Level: Detail

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code 1 Free On Board Site Code Code Value Implementation Note: Must use in contract abstracts, to indicate the destination site where the seller agrees to deliver without extra charge. Use as needed in modification and correction abstracts. Do not use in other abstracts. 10 Transaction Status Indicator Code Code Value Implementation Note: Must use in modification, correction, cancellation, and acknowledgment abstracts to identify the transaction type. Do not use in contract abstracts. 2 Type of Business Code Code Value Implementation Note: Must use in contract abstracts, to indicate the contractor's type of business classification. Use as needed in modification and correction abstracts. Do not use in other abstracts. 27 Special Reimbursable Provisions Code Code Value Implementation Note: Use as needed in 2/HLJ010 financial loops in contract, modification, and correction abstracts, to identify special reimbursement provisions. Do not use in other abstracts. 28 Kind of Modification Code Code Value Implementation Note: Must use in modification abstracts, to indicate the kind of contract modification abstract (e.g., change order or supplemental agreement). Use as needed in correction abstracts. Do not use in other abstracts. 3 Kind of Contract Code Code Value Implementation Note: Must use in contract abstracts, to indicate the kind of contract being abstracted (e.g., supply, R & D, facilities). Use as needed, in modification and correction abstracts. Do not use in other abstracts. 4 Type of Contract Code	O ID 1/3

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to indicate the type of contract being abstracted (e.g., firm fixed price, cost sharing, labor hours). Use only when costs are involved in the contract. Do not use in other abstracts.

5 Criticality Designator Code

Code Value Implementation Note:

Must use in contract abstracts, to indicate the contract criticality designator. Use as needed in modification and correction abstracts. Do not use in other abstracts.

6 Special Contract Provision Code

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to indicate special clauses/provisions. Do not use in other abstracts.

7 Quality Assurance Site Code

Code Value Implementation Note:

Must use in contract abstracts, to indicate the location where quality assurance is performed. Use as needed in modification and correction abstracts. Do not use in other abstracts.

8 Acceptance Site Code

Code Value Implementation Note:

Must use in contract abstracts, to indicate the location where ownership takes place. Use as needed in modification and correction abstracts. Do not use in other abstracts.

9 Indicator Code

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, either to indicate a partial abstract or a contract containing either the FMS sales requirement, fast pay provision, or CAO functional limitation. Do not use in other abstracts.

BD Transportation Priority Code

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to indicate the initial line haul of a shipped item. Do not use in other abstracts.

Required

LQ02 1271 Industry Code
Code indicating a code from a specific industry code list

C AN 1/20

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

- Syntax:**
1. R0203 — At least one of N102 or N103 is required.
 2. P0304 — If either N103 or N104 is present, then the other is required.

Comments:

1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 2/N1/160 loop in 2/HL/010 contract loops to identify an address when the same address applies to all line items being reported. Use the 2/N1/160 loop in 2/HL/010 line item loops to identify an address, when the address varies for even one line item.
2. Use the 2/N1/160 loop in 2/HL/010 financial loops to identify paying offices associated with an accounting classification, when the contract contains multiple paying offices.
3. Use the 2/N1/220 loop to identify a ship-to and, if applicable, a mark-for address for a line item with an established delivery schedule.
4. Use the 2/N1/220 loop in 2/HL/010 financial loops to identify a paying office and accounting station associated with a cited accounting classification.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		CW Accounting Station	
		Code Value Implementation Note:	
		Must use in contract abstracts, to identify the accounting station (CPN recipient) for transactions involving other than Navy funds. Use as needed in modification and correction abstracts. Do not use in other abstracts.	
		FA Facility	
		Code Value Implementation Note:	
		Use as needed in contract, modification, and correction abstracts, to identify a work performance facility other than the facility cited for the contractor. Do not use in other abstracts.	
		KA Item Manager	
		Code Value Implementation Note:	
		Use as needed in contract, modification, and correction abstracts, to identify an IM to receive follow-on shipment performance notices. Do not use in other abstracts.	
		KG Project Manager	

Code Value Implementation Note:

Use as needed in contract, modification, and correction abstracts, to identify a PM to receive follow-on shipment performance notices. Do not use in other abstracts.

PR Payer**Code Value Implementation Note:**

Must use in contract abstracts, to identify the paying office. Cite multiple paying offices, as needed. Use as needed in modification and correction abstracts. Do not use in other abstracts.

SE Selling Party**Code Value Implementation Note:**

Must use in contract abstracts, to identify the contractor. Use as needed in modification and correction abstracts. Do not use in other abstracts.

ST Ship To**Code Value Implementation Note:**

Must use in contract abstracts, to identify the shipment consignee. Use as needed in modification and correction abstracts. Do not use in other abstracts. Use the 2/N1/220 loop when multiple ship-to addressees apply to a cited line item.

Z7 Mark-for Party**Code Value Implementation Note:**

Use as needed in contract, modification, and correction abstracts, to identify an entity located within the ship-to address that is actually to receive the shipment. Do not use in other abstracts. Use the 2/N1/220 loop when multiple mark-for addressees apply to the cited line item.

Not Used

Optional

Segment: SCH Line Item Schedule

Level: Detail

Loop: SCH **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To specify the data for scheduling a specific line item.

- Syntax:**
1. C0304 — If SCH03 is present, then SCH04 is required.
 2. L080910 — If SCH08 is present, then at least one of SCH09 or SCH10 are required.
 3. C0908 — If SCH09 is present, then SCH08 is required.
 4. C1008 — If SCH10 is present, then SCH08 is required.

Semantic: SCH12 is the schedule identification.

Comment: SCH05 specifies the interpretation to be used for SCH06 and SCH07.

Implementation Notes:

1. Use the 2/SCH/210 loop in 2/HL/010 line item loops to identify a delivery schedule established for a cited line item. Use the 2/G62/030 segment and 2/N1/160 loop, in 2/HL/010 contract or line item loops, to identify a delivery date, ship-to address, and if applicable, a mark-for address, when a single delivery applies to the cited contract or line item.

2. Do not use when citing a delivery or performance date in the 2/G62/030 segment of 2/HL/010 line item loops.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
SCH01	380	Quantity Numeric value of quantity.	M	R	1/15

Implementation Notes:

1. Use in 2/HL/010 line item loops in contract abstracts, to identify an estimated quantity. Use as needed in modification and correction abstracts. Do not use in other abstracts.
2. Use to identify either the actual net increase or decrease in the delivery schedule quantity. A minus (-) sign precedes a decrease.
3. Express as a whole number with no decimals, for example, if the quantity is 20, cite only 20.

Mandatory

SCH02	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	M	ID	2/2
-------	-----	--	---	----	-----

Implementation Note:

Use to identify the purchase unit for the cited line item. (See the unit of issue conversion table in volume 1, chapter 10).

Not Used

3 ABSTRACTS OF CONTRACT MODIFICATIONS

3.1 GENERAL

This chapter prescribes procedures for abstracting modifications (PIOs are treated and numbered as modifications) to a contract. Contract modification is defined in FAR, section 43.1, as "... any written change in the terms of the contract." This definition includes changes to the specification, delivery point, rate of delivery, contract period, price, quantity, or other contract provisions of an existing contract whether accomplished by unilateral action in accordance with a contract provision, or by mutual action of the parties to the contract. It includes both bilateral actions, such as supplemental agreements, and unilateral actions, such as change orders, orders for provisioned items, administrative changes, notices of termination, and notices of the exercise of a contract option.

The above definition covers all additions, deletions, or changes to the contract involving elements of data found in the contract abstract. This includes amending or supplementing instructions and agreements such as initial (follow-on) shipping instructions, amended shipping instructions, exhibits to contracts, and modifications to provisioning orders. Contract modifications will be numbered in accordance with the provisions of DFARS, section 204.7004.

3.2 SOURCE DOCUMENTS

SF 30, Amendment of Solicitation/Modification of Contract, is the form authorized for use in modifying contracts (including purchase and delivery orders entered on DD Form 1155). OF 336, Continuation Sheet, is authorized for use with the SF 30.

3.3 VALIDATION AND DISTRIBUTION

The office issuing the hard copy contract modification is responsible for initiating and transmitting the abstract to the modification abstract recipient ADP point. The modification abstract originator is responsible for validating the abstract data before issuance. For contract modifications issued by the purchasing office, the modification abstract recipient is always the CAO activity reflected in the "Administered By" block, as modified, of the basic contract. For contract modifications issued by the CAO the modification abstract recipient varies:

- For calls and orders issued by the CAO, if the CAO issues a modification, the abstract recipient will be the same as the recipient of the call/order abstract, however, if another office modifies the call/order, then the abstract recipient will be the CAO.
- For modifications issued by the CAO, the recipient of the modification abstract is the office who initiated the original contract abstract unless the requirement(s) for the modification was initiated by another activity, in which case the other activity becomes the abstract recipient for that particular modification abstract. This means that for supplemental agreements definitizing PIOs, the abstract recipient is the activity which has been assigned item management responsibility for the items of supply being procured. Further, a supplemental agreement or other modification issued by the CAO and which relates to a PIO cannot encompass PIOs issued by more than one activity.

3.4 STRUCTURE OF THE MODIFICATION ABSTRACT

The details of the modification abstract, TS 561 IC - Contract Abstract, are shown at appendix 2A.

The modification abstract uses the delete and replace method for changing control data and the overlay method for adding or changing noncontrol data. Also, like the basic contract abstract, the modification abstract uses TS 561 IC - Contract Abstract, with loops within loops in table 2. The modification abstract is identified by a Transaction Status Indicator code M in the contract HL loop of table 2 ; for delete and replace, the delete transaction set contains a code K (cancellation) and is sent a day before the replace transaction set which contains code M (modification).

- Modification administrative data, i.e., that found in the header portion of the SF 30, applies to the entire modification and will be carried in the contract loop. For continuity and control purposes, this modification administrative data will be furnished between the PO and primary CAO and the disbursing office designated in the contract, if different, for all modifications whether or not the change affects the abstract.
- When a contract modification reflects a transfer of a contract between POs, table 1 will identify the PO transferring the contract and the contract loop in table 2 will identify the PO being assigned to the contract. In addition, a Kind of Modification code D will indicate a transfer of the PO function to the PO in table 2.
- When a contract modification reflects a transfer of a contract between CAOs, table 1 will identify the CAO transferring the contract and the contract loop in table 2 will identify the CAO being assigned to the contract. In addition, a Kind of Modification code E will indicate a transfer of the CAO assignment to the CAO identified in table 2. The transfer of supporting records between CAO activities will be negotiated at the time of each transfer.
- When a contract modification reflects the correction of a hard copy documentation error that was detected by the initiator prior to abstract transmission, the initial contract abstract will be revised to reflect the correction made by the hard copy modification; the abstract will identify the modification number in the contract data loop; and will be transmitted to the recipient ADP point. A Kind of Modification code F will indicate the correction of a hard copy error.
- When a contract modification reflects a partial termination of the contract, the contract data loop will include a Kind of Modification code P or Q and the affected data will be provided in the abstract.
- When a contract modification reflects a complete termination of the contract, the contract data loop will include a Kind of Modification code T or X. No other records are required until the termination notice processing has been completed and an SF 30, Amendment of Solicitation/Modification of Contract, has been issued. The resulting modification abstract will include a contract data loop with a Kind of Modification code U to identify the termination settlement.
- When a contract modification reflects obligation adjustments subsequent to physical completion of a contract in accordance with contract closing, the contract data loop will contain a Kind of Modification code R to represent repricing, recosting, renegotiation, etc. When the contract data loop contains this code, only the applicable subordinate loops are required. The code enables supporting systems to allow for an unmatched condition and

set up new obligation positions.

- For modifications other than those described above, a series of applicable HL loops will be used as described in chapter 2. The contract data HL loop will contain the SPIIN modification number, the control fields listed below, and the changed, added, or deleted information prescribed in the basic contract abstract.

3.5 CONTROL DATA

Control data in the modification abstract are as follows:

- In the contract HL loop: PIIN and SPIIN
- In the business arrangement HL loop: ACRN
- In the supplies item HL loop: CLIN and ACRN
 - In the supplies schedule loop: Ship-To, Mark-For, Contract Delivery Date, Requisition Number, and Transportation Priority
- In the services item HL loop: CLIN and ACRN
 - In the services schedule loop: Service Completion Date

3.6 CHANGING CONTROL DATA

On the infrequent occasions when a modification changes the PIIN, SPIIN, or CLIN/ELIN, a message will indicate the PIIN of the modification and information relative to the following situation, as applicable:

- The old PIIN and/or SPIIN changed to a new PIIN and/or SPIIN.
- The current PIIN and/or SPIIN and old CLIN/ELIN changed to a new CLIN/ELIN.
- The old PIIN and/or SPIIN and CLIN/ELIN changed to a new PIIN and/or SPIIN and CLIN/ELIN.

Where control data other than PIIN, SPIIN or CLIN/ELIN (such as to update a delivery schedule with shipping information, or to amend a schedule to change destination and add requisition number data) is to be changed, it will be done by delete and add:

- The modification abstract, TS 561 IC - Contract Abstract, in table 2 will duplicate the entire applicable HL loop of the original abstract that contained the old control data, and include an LQ data segment with a Transaction Status Indicator code K for cancellation. This will serve to delete the record with the old control data.
- Prepare a new modification abstract, TS 561 IC - Contract Abstract, with the new control data, consisting of the HL loops that provide all of the required data to complete the record, and utilizing the technique for addition of data records, i.e., a Transaction Status Indicator code C for corrected transaction. This will establish the new record with the new control data.

3.7 NONCONTROL DATA

Noncontrol data is all of the abstract data that is not identified in section 3.5 above.

Noncontrol data uses the overlay technique (i.e., the new data is carried in the modification abstract and simply replaces the old data in the database.)

3.8 CHANGING NONCONTROL DATA

When one or more fields of the previous abstract are to be changed, enter the applicable control data listed in section 3.5 above and the new noncontrol data in their proper loops. If it is desired to delete (blank) a field containing significant data (i.e., pertinent data that is no control data), fill the field to be blanked with the minimum number of "Xs" (for alpha numeric fields) and "0s" (for numeric fields) and include Transaction Status Indicator code K for cancellation. The format of the modification abstract is the same as that of the basic TS 561 IC - Contract Abstract.

This method of abstracting changes to noncontrol data permits the use of the overlay technique for updating master contract records whereby a given record is located through comparison of control elements and the new information replaces the old information while the remainder of the data remains unchanged.

The overlay technique described above will be used for changing all noncontrol data except for increasing or decreasing quantities and amounts (not unit price) on modification abstracts. When quantities and amounts are being changed, the net increase or decrease in each affected record will be transmitted.

3.9 ADDING OR DELETING DATA

A contract modification, TS 561 IC - Contract Abstract, requiring the addition of a new record to the abstract or deletion of an existing record without further replacement, will utilize the same procedures as prescribed in section 3.6 above, for deleting and adding data.

This method will be used for deleting specific records in an abstract, TS 561 IC - Contract Abstract, and will not be used to delete entire contract abstract.

3.10 UNSOLICITED SUBMISSION OF OMITTED AND/OR CORRECTION OF ERRONEOUS DATA

When the contract is correct, but the abstract initiator, after transmission, discovers that data in the abstract is incorrect or has been omitted, an error/correction abstract, TS 561 IC - Contract Abstract, should be issued. This transaction is only different from a modification abstract in that there is no applicable contract modification. Both use the delete and replace method for control data and the overlay method for noncontrol data. An error/correction abstract, TS 561 IC - Contract Abstract, is also issued in other cases, such as stock list changes, i.e., going from a non-NSN to an NSN (if FAR or DFARS does not require a contract modification).

- The error/correction abstract is identified in the contract HL loop by a Transaction Status Indicator code U.

- All errors, whether control data or noncontrol data, associated with abstracts containing PIIN/SPIIN/CLIN/ELIN control errors will be corrected by message form. Messages correcting PIIN/SPIIN and CLIN/ELIN errors will cite the old PIIN/SPIIN and CLIN/ELIN (if CLIN/ELIN changes). The PIIN/SPIIN/CLIN/ELIN will be a one line **from** and one line **to** change which will be applicable to all contract abstract, TS 561 IC - Contract Abstract, data in error. Whenever both PIIN/SPIIN/CLIN/ELIN and other errors occur together, The error/correction abstract, TS 561 IC - Contract Abstract, will contain the corrected PIIN/SPIIN/CLIN/ELIN.
- Unsolicited error/correction transactions involving control data will be corrected by delete and replace. To delete, prepare an exact duplicate of control elements contained in the original TS 561 IC - Contract Abstract and include a Transaction Status Indicator code K (cancellation). To replace, prepare a, TS 561 IC - Contract Abstract, with the correct control data and include a Transaction Status Indicator code U (error/correction abstract, i.e. add new data).
- Unsolicited error/correction transactions, TS 561 IC - Contract Abstract, involving other than control data must contain all of the required control elements. Only the noncontrol data elements being changed must be filled and (except for quantity and amount) these fields establish, replace, or overlay their respective fields. Quantity and amount (excluding unit price) are net increase/decrease, plus or minus, (see section 3.8 above). The net increase/decrease is the difference between the source document (the contract or modification) and the previously submitted transaction.

3.11 PREPARATION OF MODIFICATION AND ERROR/CORRECTION ABSTRACT TRANSACTIONS

Use TS 561 IC - Contract Abstract (appendix 2A) for a modification or an error/correction abstract.

- The term "contract abstract" as used here includes an abstract of an original contract, an abstract of a contract modification, and an error/correction transaction. Each of these can be identified by the inclusion, or exclusion when appropriate, of a Transaction Status Indicator code.
- Any number of modification or error correction abstracts, going to the same ADP point, may be included with other abstracts in the same transaction set.
- The transaction set contains three tables.
 - Table 1 identifies the CAO, the PO, and usually the recipient ADP point in iterations of data segment N1.

- .. Table 2 identifies the modification or error/correction data in HL loops. Multiple contracts may be included in the same transaction set.
 - ... There is a contract HL loop for the administrative data that applies to the whole contract as modified by this abstract. This loop always includes the contract number or the call/order number. In addition it will include any contract level data that is changed as a result of the modification or correction, such as, discount terms, paying office, common codes, etc. The Transaction Status Indicator code will distinguish between a modification (code M) and an error/correction (code U).
 - ... There is a billing agreement HL loop for each funding line that is affected by the abstract. This loop includes data, such as, the ACRN, the long line accounting data, the dollar amount chargeable to that accounting data, the special reimbursable codes, etc. The HL data segment includes a reference back to the contract HL loop.
 - ... There is an item HL loop for each line or subline that is affected by the abstract. While in most cases this loop identifies data pertinent to the line item, in some cases there may be an item HL loop with nonCLIN data. The HL data segment includes a reference back to the billing agreement HL loop to which the line is related.
 - ... When the line or subline quantity is further subdivided, i.e., when there is a schedule of more than one ship-to, mark-for, delivery date or requisition number, the subquantities and related data are nested in iterations of the schedule loop at the end of the item loop. The quantities for the various schedule iterations should add up to the quantity for the line.
- Table 3 is the usual transaction set trailer.

4 SHIPMENT PERFORMANCE NOTIFICATION

4.1 GENERAL

This chapter prescribes standard procedures for the CAO and other parties to report the shipment of supplies and the performance of services. These reports are identified as TS 856 - IC Shipment Performance Notice (appendix 4A). They provide the PO, IM/IMM, or PM with timely information in automated form to post the local data base automatically and to reduce the number of copies of the DD Form 250, Material Inspection and Receiving Report, required for reporting shipments and performance.

4.2 FLOW AND DISTRIBUTION

The SPN flows from the CAO or other party to the IM/IMM or PM (or designated ADP point), as indicated in the contract for the line item number. If the contract does not identify a manager, the TS 856 - IC Shipment Performance Notice is sent to the PO that issued the contract or order under the contract. The CAO will not send the TS 856 - IC Shipment Performance Notice to more than one point for the same line item number. The Service/Agency may accomplish further distribution internally.

4.3 SHIPMENT PERFORMANCE NOTICE

The TS 856 - IC Shipment Performance Notice is the means for providing timely notification of the shipment of material, or the completion of services, by a contractor. It provides information for updating due-in assets, intransit accounting, shipment status, billing customers on direct delivery, and major item control. Appendix F of DFARS contains the instructions applicable to preparation and distribution of the DD Form 250.

The date/time qualifier field, DTM01, specifically identifies shipment and performance dates, whether actual or estimated. For a shipment of material the TS 856 - IC Shipment Performance Notice will use code 011, for the shipment date, and 139, for the estimated shipment date; for performance of services the TS 856 - IC Shipment Performance Notice will use code 198, for the services completion date, and 245, for the estimated completion date.

The CAO will transmit the TS 856 - IC Shipment Performance Notice within one working day after receipt of the hard copy (DD Form 250 or DD Form 1155) or other TS 856 - IC Shipment Performance Notice information.

A TS 856 - IC Shipment Performance Notice can include various shipment and performance records, from the same or from different contracts. The HL data segment has three hierarchical levels. The first level is an address loop (identifying the sender and the receiver of the transaction), followed by one or more second level shipment number loops (which also carry the contract number), each of which may have one or more third level line item loops.

The following fields are control elements for discretely identifying one shipment or performance report from another:

- PIIN
- Call/Order Number
- ELIN or CLIN
- Ship-To Identity or Performed-At Identity
- Contractor Shipment Number
- Contractor Shipment Number Suffix
- Suffix Code (when applicable)

4.4 USE OF THE SPN FOR BULK PETROLEUM CONTRACTOR SHIPMENTS

The DFR, contractor, or QAR, as appropriate, must report contractor shipment of DLA-owned bulk petroleum to DFSC as documented on DD Form 250 and DD Form 250-1, Tanker/Barge-Material Inspection and Receiving Report. This will be accomplished using the TS 856 - IC Shipment Performance Notice (appendix 4A) as prescribed by DoD 4140.25-M. DFRs may report corrections using Transaction Status Indicator code C and reversals using Transaction Status Indicator code K, for cancellation. Other status and advice codes addressed in this chapter do not have specific bulk petroleum applications.

4.5 INCOMPLETE ITEMS

Components Missing - Items may be shipped with components missing. When this occurs, TS 856 - IC Shipment Performance Notice will contain Contract Shipment Advice code A. This advice code indicates that the items are incomplete.

Missing Components Furnished - When components are shipped to complete items previously shipped incomplete, TS 856 - IC Shipment Performance Notice will contain Contract Shipment Advice code B. This code indicates that the shipment is not an additional quantity of the line item, but the components required to complete previously shipped items.

4.6 QUANTITATIVE DISCREPANCIES

On acceptance at destination shipments, the recipient reports discrepancies between the quantity documented as shipped and the quantity accepted to the CAO. Upon receipt of an TS 861-Acceptance Report (appendix 5B) indicating a quantitative discrepancy, the CAO will prepare an additional TS 856 - IC Shipment Performance Notice as follows:

- When the quantity accepted is greater than the quantity documented as shipped, create a TS 856 - IC Shipment Performance Notice reflecting the difference. This transaction will cite Contract Shipment Advice code C and will reflect the increase in the quantity shipped.
- When the quantity accepted is less than the quantity documented as shipped, create a TS 856 - IC Shipment Performance Notice reflecting the difference. This transaction will cite Contract Shipment Advice code D and will reflect the decrease in the quantity shipped.

4.7 REPLACEMENT SHIPMENTS

When a shipment consists of replacements for supplies previously shipped and subsequently reported as damaged, nonconforming, or missing (quantitative discrepancies) at destination, the TS 856 - IC Shipment Performance Notice will contain Contract Shipment Advice code E and will reflect the contractor shipment number of the initial shipment with an alphabetic serial suffix to indicate the replacement shipment.

4.8 CANCELLATIONS

Conditions may arise that necessitate the cancellation of an TS 856 - IC Shipment Performance Notice. When this occurs the cancellation TS 856 - IC Shipment Performance Notice will contain Transaction Status Indicator code K. The cancellation TS 856 - IC Shipment Performance Notice must precede the replacement TS 856 - IC Shipment Performance Notice by at least 1 day.

4.9 DATA DISCREPANCIES

At times, some of the information in the TS 856 - IC Shipment Performance Notice will not agree with information that the CAO has on the contract. The CAO knows that the shipment information does not agree with the contract information and cannot resolve the difference. In these situations, the CAO will issue the TS 856 - IC Shipment Performance Notice with the appropriate Transaction Status Indicator code G, H, L, P, Q, S, or T.

4.10 EXEMPTIONS

For Army, Navy, and DLA fast pay contracts of \$25,000 or less, the CAO will not provide the TS 856 - IC Shipment Performance Notice to the PO. Army will use the TS 567 - Contract Completion Status to indicate both final shipment and contract completion.

4.11 PREPARATION OF THE TRANSACTION

Use TS 856 IC - Shipment Performance Notice (appendix 4A) to report both shipment of supplies and completion of services.

- Any number of shipment or completion reports, going to the same addressee, can be included in the same transaction set.
- The TS 856 - IC Shipment Performance Notice includes both the shipment of supplies and the performance of services. The code in LIN02 distinguishes services from supplies; code SV identifies services, the other three codes identify supplies.
- The SPIIN used in these transactions is the four-position call/order number; use the data field, PRF02, only when a call/order number applies. The SPIIN does not include a modification number or a provisioning item order number.
- The CAO may authorize the contractor to use this transaction set to submit shipping or performance information, in lieu of, or in addition to the DD Form 250. In this situation, the address loop would identify the contractor and the CAO.
- This transaction set contains three tables.
 - Table 1 identifies the transaction as a SPN. BSN03 carries the transaction date and is applicable to all reports.
 - Table 2 is controlled by HL loops. Multiple records are included by multiple iterations of the HL loop.
 - Table 3 is the usual transaction set trailer.
- The HL loop in table 2 contains three levels of data.
 - The first or highest level is the address loop; the second level is the shipment loop; and the third level is the line item loop.
 - There will be one address loop; it will identify the code FR (from the CAO) and the TO (to the IM/IMM, PM, or PO) location codes in the transaction set.

- .. There will be one shipment loop for each shipment number in the transaction set.
- .. There will be one line item loop for each CLIN/ELIN in the shipment. As in a contract, the CLIN or subCLIN may be further subdivided by Ship-To or requisition number, each needing its own line item loop.
 - ... For supply shipments against Navy or DLA contracts include the NSN or local stock number for the item in LIN03; for supply shipments against Army or Air Force contracts include the requisition number in LIN03.
 - ... A shipment date may be actual or estimated.
 - ... A cancelled TS 856 - IC Shipment Performance Notice will contain a Transaction Status Indicator code K.
 - ... There are occasions when a shipment has a zero quantity. An example would be sub-assembly parts that are not counted as deliverable items. When the final deliverable is made, the higher assembly is then counted. Because this transaction set requires a shipment quantity, in this situation a zero will be passed in data field SN102.
 - ... Purchase unit historically has been omitted from shipment and performance data. However, it is included in this transaction set and is available if needed.

APPENDIX 4A

**TRANSACTION SET 856 IMPLEMENTATION CONVENTION
SHIPMENT PERFORMANCE NOTICE**

856 Ship Notice/Manifest

This Draft Standard for Trial Use contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics, type of packaging, marking, carrier information, and configuration of goods within the transportation equipment. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail and provides an ordered flexibility to convey information.

The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment.

Implementation Notes

1. *CAOs and other parties use this transaction set to provide shipment notice information to POs, IMs, PMs designated in a contract, IMMs, or other Service/Agency designated organizations (the latter via their respective ADP points). Contractors must transmit an SPN within one workday of shipment or performance. CAOs transmit an SPN after receipt of a contractor transmitted SPN or Material Inspection and Receiving Report (DD Form 250/DD Form 250-1).*
2. *Use a single occurrence of this transaction set to report, cancel, or correct, either one or more supply (including bulk petroleum) and service SPNs to one or more activities. Use one occurrence of this transaction set to transmit a single or multiple transactions.*
3. *Use to correct a quantity discrepancy contained in a previously transmitted SPN.*
4. *Transmit a cancellation SPN one day before a corrected SPN, for other than bulk petroleum.*
5. *Do not use for Army, Navy, and DLA fast pay contracts of \$25,000 or less, except when reporting on bulk petroleum shipments.*

NOTES/COMMENTS:

2/010 The HL segment is the only mandatory segment within the HL loop, and by itself, the HL segment has no meaning.

3/010 Number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of units shipped (SN102) for each SN1 segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
	856	X12.10 Ship Notice/Manifest			

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9
------	-----	---	---	----	-----

Segment: BSN Beginning Segment for Ship Notice

Level: Header

Loop: _____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To transmit identifying numbers, dates and other basic data relating to the transaction set

Syntax: C0706 — If BSN07 is present, then BSN06 is required.

Semantic: 1. BSN03 is the date the shipment transaction set is created.
2. BSN04 is the time the shipment transaction set is created.
3. BSN06 is limited to shipment related codes

Comment: BSN06 and BSN07 differentiate the functionality of use for the transaction set

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BSN01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original Code Value Implementation Note: Use regardless of the type of SPN.	M ID 2/2
Mandatory	BSN02	396	Shipment Identification A unique control number assigned by the original shipper to identify a specific shipment. Implementation Note: Use ZZ for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The ZZ entry satisfies the X12 usage requirements; the receiving application software shall not process it.	M AN 2/30
Mandatory	BSN03	373	Date Date (YYMMDD).	M DT 6/6
Mandatory	BSN04	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) Implementation Notes: 1. Express the originating activity's time in GMT. 2. Express time in a four-position (HHMM) format.	M TM 4/8
Not Used	BSN05	1005	Hierarchical Structure Code	O ID 4/4

Required	BSN06 640 Transaction Type Code Code specifying the type of transaction.	C ID 2/2
----------	---	----------------

Implementation Note:

Use when the transaction set contains one or more notices regardless of the type of SPN.

U2 Shipment Performance Notice

Not Used	BSN07 641 Status Reason Code	O ID 3/3
----------	------------------------------------	----------------

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** 200000

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. Iterations of the 2/HL/010 loop provide SPN transaction data structured in a heirarchical logic consisting of: address, shipment, and line item information.

2. Must use the first 2/HL/010 loop iteration as the address loop. Use the second iteration as the shipment loop to provide shipment information common to all line items. Must use the third and, if applicable, subsequent loop iterations as the line item loop. Repeat the shipment and line item loops to identify additional shipments in the same transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O	AN	1/12
Implementation Notes: 1. Do not use in 2/HL/010 address loops. Use in 2/HL/010 shipment loop iteration to identify the address loop associated with each shipment. Also use for each 2/HL/010 line item loop iteration to identify the shipment loop associated with each line item. 2. Cite the sequential serial number assigned in HL01 of the 2/HL/010 address loop to identify the shipment associated with the address. Cite the sequential serial number assigned in HL01 of the 2/HL/010 shipment loop to identify the line item associated with the shipment level loop. Citing the applicable information in this fashion provides a cross-reference for all address, shipment, and line item information contained in the SPN transaction set.						
Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure. I Item Code Value Implementation Note: Use to identify the individual line item loops. S Shipment Code Value Implementation Note: Use to identify the individual shipment loops. V Address Information Code Value Implementation Note: Use to identify the transaction set address loop.	M	ID	1/2
Not Used	HL04	736	Hierarchical Child Code	O	ID	1/1

Optional

Segment: LIN Item Identification

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use the 2/LIN/020 segment in 2/HL/010 line item loops to cite a line item and to identify only one NSN or manufacturer's part number.
2. Must use at least one iteration of this segment to identify the line item.
3. If the line item cannot be described using one of the listed stock or part number codes, LIN02/03 must still be used to satisfy X12 standards.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Required	LIN01	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O	AN	1/11
	Implementation Note: Use to identify the CLIN, (including a SUBCLIN, ELIN, SUBELIN, or ALIN).					
Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
	Implementation Notes: 1. Use either of codes FS, MG, or SW to identify material only for Navy and DLA contracts. Use code SV to identify service SPN reports. 2. Use PD for this data element when the line item cannot be identified by using one of the other listed codes. Use Z in LIN03. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirement; the receiving application software shall not process it. 3. For bulk fuels only use code FS and ZZ in LIN03 when the NSN is not available. The ZZ satisfies the X12 standards; the receiving application software does not use this data element.					
	FS National Stock Number Code Value Implementation Note: Must use for Navy and DLA contracts, when the NSN is known.					
	MG Manufacturer's Part Number Code Value Implementation Note: Use as needed to identify the manufacturer's part number. When using, there must be an additional occurrence of a 235/234 pair citing code ZB to identify the manufacturer's CAGE code.					
	PD Part Number Description Code Value Implementation Note: Use the letter Z in LIN03 to indicate "See Contract" when the item can not be described by one of the other codes.					
	SV Service Rendered Code Value Implementation Note: Use to identify services performed for any Service or Agency.					
	SW Stock Number Code Value Implementation Note: Use to identify a local stock number for Navy and DLA contracts.					
	ZB Commercial and Government Entity (CAGE) Code Code Value Implementation Note: Use to identify a manufacturer's CAGE code only when a 235/234 pair cites code MG.					
Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Conditional	LIN04	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2
Conditional	LIN05	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
Not Used	LIN06	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	LIN07	234	Product/Service ID	C	AN	1/40
Not Used	LIN08	235	Product/Service ID Qualifier	C	ID	2/2

Not Used	LIN09	234	Product/Service ID	C	AN	1/40
Not Used	LIN10	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	LIN11	234	Product/Service ID	C	AN	1/40
Not Used	LIN12	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	LIN13	234	Product/Service ID	C	AN	1/40
Not Used	LIN14	235	Product/Service ID Qualifier	C	ID	2/2

Not Used	LIN27	234	Product/Service ID	C	AN	1/40
Not Used	LIN28	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	LIN29	234	Product/Service ID	C	AN	1/40
Not Used	LIN30	235	Product/Service ID Qualifier	C	ID	2/2
Not Used	LIN31	234	Product/Service ID	C	AN	1/40

Optional

Segment: SN1 Item Detail (Shipment)

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To specify line item detail relative to shipment

Syntax: P0506 — If either SN105 or SN106 is present, then the other is required.

Semantic: SN101 is the ship notice line item identification.

Comment: SN103 defines the unit of measurement for both SN102 and SN104.

Implementation Notes:

1. Use as needed in 2/HL/010 line item loops to identify the material shipment quantity.
2. Use only as needed when reporting services.

Data Element Summary

Not Used

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
SN101	350	Assigned Identification	O	AN	1/11
SN102	382	Number of Units Shipped	M	R	1/10
		Numeric value of units shipped in manufacturer's shipping units for a line item or transaction set.			

Implementation Notes:

1. Use to identify the quantity shipped.
2. Express quantity as a whole number with no decimals. For example, if the quantity is 20, cite only 20.
3. Use the number 0 to indicate no quantity was either shipped or reported, such as in an interim SPN.

Mandatory

SN103	355	Unit or Basis for Measurement Code	M	ID	2/2
		Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken			

Implementation Note:

Use to identify the purchase unit for the quantity shipped or service performed. (See the unit of issue conversion table in volume 1, chapter 10.) The receiving application software may not need to use this data element. Use code UL when no purchase unit applies.

Not Used

Not Used

Not Used

Not Used

Not Used

SN104	646	Quantity Shipped to Date	O	R	1/9
SN105	330	Quantity Ordered	C	R	1/9
SN106	355	Unit or Basis for Measurement Code	C	ID	2/2
SN107	728	Returnable Container Load Make-Up Code	O	ID	1/2
SN108	668	Line Item Status Code	O	ID	2/2

Optional

Segment: PRF Purchase Order Reference

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To provide reference to a specific purchase order

Semantic: PRF04 is the date assigned by the purchaser to purchase order.

Implementation Notes:

1. Use in 2/HL/010 shipment loops to identify contract information.
2. Use to identify the PIIN and, if applicable, the SPIIN. Do not include a modification number, if applicable.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PRF01	324	Purchase Order Number Identifying number for Purchase Order assigned by the orderer/purchaser.	M AN 1/22
	Implementation Note: Use to identify the PIIN of the contract, agreement, order or the abbreviated contract number for bulk petroleum.			
Optional	PRF02	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O AN 1/30
	Implementation Note: Use to identify a four-position SPIIN call/order number. Do not include the modification number.			
Not Used	PRF03	327	Change Order Sequence Number	O AN 1/8
Not Used	PRF04	373	Date	O DT 6/6
Not Used	PRF05	350	Assigned Identification	O AN 1/11
Not Used	PRF06	367	Contract Number	O AN 1/30
Not Used	PRF07	92	Purchase Order Type Code	O ID 2/2

Optional

Segment: TD5 Carrier Details (Routing Sequence/Transit Time)

Level: Detail

Loop: HL

Usage: Optional

Max Use: 12

Purpose: To specify the carrier, sequence of routing and to provide transit time information

Syntax: 1. R0204050612 — At least one of TD502, TD504, TD505, TD506 or TD512 is required.

2. C0203 — If TD502 is present, then TD503 is required.

3. C0708 — If TD507 is present, then TD508 is required.

4. C1011 — If TD510 is present, then TD511 is required.

Comment: When specifying a routing sequence to be used for the shipment movement in lieu of specifying each carrier within the movement: use TD502 to identify the party responsible for defining the routing sequence; use TD503 to identify the actual routing sequence, specified by the party identified in TD502.

Implementation Note:

Use in 2/HL/010 shipment loops to identify the mode of shipment for supply line item SPNs.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	TD501	133	Routing Sequence Code	O	ID	1/2
Not Used	TD502	66	Identification Code Qualifier	C	ID	1/2
Not Used	TD503	67	Identification Code	C	AN	2/20
Required	TD504	91	Transportation Method/Type Code	C	ID	1/2
			Code specifying the method or type of transportation for the shipment.			
Implementation Note:						
<i>Use to identify the mode of shipment. (See the mode of shipment conversion table in volume 1, chapter 10).</i>						
<i>When code Z (tanker shipment) is cited, transmit the transaction set to all addressees qualified by code PN in 2/N1/220.</i>						
Not Used	TD505	387	Routing	C	AN	1/35
Not Used	TD506	368	Shipment/Order Status Code	C	ID	2/2
Not Used	TD507	309	Location Qualifier	O	ID	1/2
Not Used	TD508	310	Location Identifier	C	AN	1/30
Not Used	TD509	731	Transit Direction Code	O	ID	2/2
Not Used	TD510	732	Transit Time Direction Qualifier	O	ID	2/2
Not Used	TD511	733	Transit Time	C	R	1/4
Not Used	TD512	284	Service Level Code	C	ID	2/2

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: HL

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Notes:

1. Use in the 2/HL/010 shipment loop to identify the shipment number assigned by the contractor, and if applicable, the suffix associated with the shipment number.
2. Use in the 2/HL/010 line item loop to identify the transaction number (i.e., requisition number), and, if applicable, the requisition number suffix, and other controlling numbers for bulk petroleum shipments.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M ID 2/2

55 Sequence Number

Code Value Implementation Note:

Use, if applicable, in 2/HL/010 shipment loops to identify the suffix letter associated with a replacement shipment (e.g., when transmitting the letter A to indicate the first replacement shipment).

BL Government Bill of Lading

Code Value Implementation Note:

Use as needed for bulk petroleum to identify all GBLs for single shipments.

FS Final Sequence Number

Code Value Implementation Note:

Use, if applicable, in 2/HL/010 shipment loops to identify the final shipment suffix.

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Must use to identify the shipment number in supply and service SPNs. Do not use in bulk petroleum SPNs.

TN Transaction Reference Number

Code Value Implementation Note:

Use to identify the transaction number (i.e., the requisition number).

W8 Suffix

Code Value Implementation Note:

Use as needed to identify the suffix associated with the transaction number.

XC Cargo Control Number

Code Value Implementation Note:

Use for bulk petroleum SPNs to identify the cargo number assigned to a tanker shipment.

Required	REF02	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			

Not Used	REF03	352	Description	C	AN	1/80
----------	-------	-----	-------------	---	----	------

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: HL

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use in the 2/HL/010 shipment loop to identify either the actual or estimated date of material shipment when the same date applies to all line items cited in the 2/HL/010 line item loops.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374 Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
	Implementation Note: Use only one code in 2/HL/010 shipment loops, except for bulk petroleum shipment transactions which may cite codes 011 and 375 together, if applicable.				
		011 Shipped			
		Code Value Implementation Note: Use to indicate the applicable line item has been shipped.			
		139 Estimated			
		Code Value Implementation Note: Use to indicate the applicable line item has an estimated shipping date.			
		198 Completion			
		Code Value Implementation Note: Use to identify the date the service was performed.			
		245 Estimated Completion			
		Code Value Implementation Note: Use to identify the estimated date the service will be performed.			
		375 Delivery Start			
		Code Value Implementation Note: Use to identify the date bulk petroleum was either loaded on a tanker or barge, or pipeline pumping commenced. Use only with FOB origin shipments. Use only with code 011.			
Required	DTM02	373 Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337 Time	C	TM	4/8
Not Used	DTM04	623 Time Code	O	ID	2/2
Not Used	DTM05	624 Century	O	N0	2/2
Not Used	DTM06	1250 Date Time Period Format Qualifier	C	ID	2/3

Not Used

DTM07 1251 Date Time Period

C AN 1/35

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** 200

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 2/N1/220 loop in 2/HL/010 address loops to identify: a) the CAO, DFR, contractor, or other party originating the transaction set; b) the ADP point as specified in the contract for the PO, IM, IMM, PM, or other party receiving the transactions set; and c) the ship-to, ultimate recipient, or service performance locations when the same address applies to all shipments cited in the 2/HL/010 shipment loops.

2. Use the 2/N1/220 loop in 2/HL/010 address loop to identify the ship-to, ultimate recipient, or services performance location when the same address applies to all lines cited in the 2/HL/010 line items loops. Use 2/NL/220 loop in the 2/HL/010 line item loop to identify the ship-to, ultimate recipient, or services performance location when any address varies by line item.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	
		B2 Other Unlisted Type of Organizational Entity	
		Code Value Implementation Note:	
		Use to identify other party originating the transaction set when no other N101 code applies.	
		C4 Contract Administration Office	
		Code Value Implementation Note:	
		Use to identify the CAO originating the transaction set.	
		C9 Contract Holder	
		Code Value Implementation Note:	
		Use to identify the contractor originating the transaction set.	
		CJ Automated Data Processing (ADP) Point	
		Code Value Implementation Note:	
		Use to identify the ADP point to receive the transaction set.	
		KG Project Manager	
		Code Value Implementation Note:	
		Use to identify the PM to receive the transaction set.	
		PN Party to Receive Shipping Notice	

Code Value Implementation Note:

Use for bulk petroleum shipments only when TD504 cites code Z, to identify other parties to receive the SPN transaction set.

QB Purchase Service Provider

Code Value Implementation Note:

Use to identify the PO to receive the transaction set.

ST Ship To

Code Value Implementation Note:

Use to identify the shipment consignee (ship-to address) when a single consignee applies to the shipment. Use the 2/SDQ/290 segment to identify multiple ship-to consignees for a single bulk petroleum delivery order.

SV Service Performance Site

Code Value Implementation Note:

Use to identify the performance location.

Z4 Owning Inventory Control Point

Code Value Implementation Note:

Use to identify the IM or IMM to receive the transaction set.

Z7 Mark-for Party

Code Value Implementation Note:

Use as needed to identify an entity located within the ship-to address that is to actually receive the shipment.

Not Used

N102 93 Name C AN 1/35

Required

N103 66 Identification Code Qualifier C ID 1/2
Code designating the system/method of code structure used for Identification Code (67).

10 Department of Defense Activity Address Code (DODAAC)

33 Commercial and Government Entity (CAGE)

Code Value Implementation Note:

Use when the contractor issues the SPN.

A2 Military Assistance Program Address Code (MAPAC)

Code Value Implementation Note:

Use to identify an FMS/GA ship-to or mark-for address.

M4 Department of Defense Routing Identifier Code (RIC)

Required

N104 67 Identification Code C AN 2/20
Code identifying a party or other code.

Not Used

N105 706 Entity Relationship Code O ID 2/2

Optional

N106 98 Entity Identifier Code O ID 2/2
Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 2/N101/220 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: SDQ Destination Quantity

Level: Detail

Loop: HL

Usage: Optional

Max Use: 50

Purpose: To specify destination and quantity detail.

- Syntax:**
1. P0506 — If either SDQ05 or SDQ06 is present, then the other is required.
 2. P0708 — If either SDQ07 or SDQ08 is present, then the other is required.
 3. P0910 — If either SDQ09 or SDQ10 is present, then the other is required.
 4. P1112 — If either SDQ11 or SDQ12 is present, then the other is required.
 5. P1314 — If either SDQ13 or SDQ14 is present, then the other is required.
 6. P1516 — If either SDQ15 or SDQ16 is present, then the other is required.
 7. P1718 — If either SDQ17 or SDQ18 is present, then the other is required.
 8. P1920 — If either SDQ19 or SDQ20 is present, then the other is required.
 9. P2122 — If either SDQ21 or SDQ22 is present, then the other is required.

Semantic: SDQ23 identifies the area within the location identified in SDQ03, SDQ05, SDQ07, SDQ09, SDQ11, SDQ13, SDQ15, SDQ17, SDQ19, and SDQ21.

- Comments:**
1. SDQ02 is used only if different than previously defined in the transaction set.
 2. SDQ03 is the store number.
 3. SDQ23 may be used to identify areas within a store, e.g. front room, back room, selling outpost, end aisle display, etc. The value is agreed to by trading partners or industry conventions.

Implementation Note:

Use as needed in 2/HL/010 line item loops to identify multiple original consignees of a single bulk petroleum delivery order and the estimated delivery quantities to each original consignee. Quantities cited must total the quantity shipped identified in 2/SN1/030.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Mandatory	SDQ01	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	M	ID	2/2
Implementation Note: Use to identify the purchase unit. (See volume 1, chapter 10, for the purchase unit conversion table.) Use code UL for bulk fuels only to satisfy the X12 standards when the unit of issue is not available. The receiving application software does not use this data element.						
Optional	SDQ02	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67).	O	ID	1/2
Implementation Note: This qualifier applies to all entries using data element 67 (SDQ03, 05, etc).						
10 Department of Defense Activity Address Code (DODAAC)

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 2/LM/340 loop to identify DoD unique coded data related to the transaction set.

Data Element Summary

Mandatory

Not Used

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
LM02	822	Source Subqualifier	O	AN	1/15

Mandatory

Segment: LQ Industry Code
Level: Detail
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:
 Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code A9 Supplementary Address	O	ID	1/3
Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Mandatory

Segment: SE Transaction Set Trailer

Level: Summary

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

5 DESTINATION ACCEPTANCE REPORTING

5.1 GENERAL

This chapter provides standard procedures for the receiving activity to report acceptance of material at destination. The procedure does not apply to contracts specifying acceptance at origin.

The provisions of this chapter apply only to those DoD contracts that are assigned to the DCMC for administration and/or to the DFAS for payment. All elements of DoD are encouraged to use this procedure even when contracts are not assigned for field administration or payment.

Activities performing acceptance at destination will prepare and transmit TS 861 IC - Acceptance Report, as shown at appendix 5B, whenever a DFAS office is indicated in the "Payment Will Be Made By" block of the DD Form 250 or the DD Form 1155.

This procedure also provides for DFAS to send the acceptance alerts (including any subsequent followup alert), TS 856 IC - Acceptance Alert, as shown at appendix 5A, to the consignee. The capability to receive the TS 856 IC - Acceptance Alert from the DFAS facilitates the preparation of the TS 861 IC - Acceptance Report.

Purchase orders that contain fast pay provisions (see FAR, subpart 13.3) are exempt from the destination acceptance reporting provisions of this chapter. Neither inspection nor acceptance documentation is required to support payment of invoices under fast pay procedures.

5.2 FLOW OF DOCUMENTS

The TS 856 IC - Acceptance Alert flows from the DFAS to the DAASC for further routing to the consignee when acceptance is at other than the origin. TS 861 IC - Acceptance Report flows from the acceptance activity to the DAASC for further routing to the DFAS.

5.3 DELIVERY DATE

The TS 861 IC - Acceptance Report contains a field for reporting the date of delivery. This date will be used in determining the contractor's performance under the contract. The date in this field is the date that the supplies are physically delivered to the consignee (the address of the ship-to identity code) shown in the contract delivery schedule.

When supplies are offered for delivery and the consignee is unable to receive them on the day offered, the accepting activity will consider the supplies to have been delivered on the day offered if they are found to be acceptable when received. The accepting activity will report the date offered as the date delivered. This does not apply when supplies are offered for delivery in advance of the contract delivery schedule and the contract prohibits acceleration of deliveries by the contractor.

When supplies are documented as a single shipment on the DD Form 250 or the DD Form 1155 and are delivered as partial transportation units, the accepting activity will prepare an acceptance report when each transportation unit of the line shipped is delivered. The date of delivery will be the date that each transportation unit is delivered.

5.4 ACCEPTANCE ALERT

The acceptance alert is a means by which the DFAS notifies the consignee of material requiring acceptance at destination. The TS 856 IC - Acceptance Alert facilitates preparation of the TS 861 IC - Acceptance Report. The TS 856 IC - Acceptance Alert will also be used as a followup on a delinquent acceptance report or as a request for retransmission of a report. An acceptance alert will not be sent to the destination by the DFAS if an acceptance report has already been received by the DFAS.

- Liquidated Damages Clause - The alert will contain a Special Contract Provisions code A to indicate the presence of the liquidated damages clause in a contract. Priority will be given to acceptance of deliveries under such contracts because of the urgent need for the supplies.
- Cash Discounts - The alert will contain a Cash Discount Stipulation code D to indicate the provisions for cash discounts in a contract. Priority will be given to inspection and/or acceptance of deliveries under such contracts to preclude the loss of discounts.
- Quality Assurance - The alert will contain Quality Assurance code D, for quality assurance to be performed at destination, or code S, when quality assurance was performed at source. With code D, it is the responsibility of the accepting activity to ensure that inspection is performed prior to acceptance.
- Direct Delivery - When the alert is sent to a consignee that is not a stock point or depot, it will contain the applicable requisition number to be used by those direct delivery activities that need it.
- Time Standards - DFAS will forward an alert to the ship-to addressee within one workday after receipt of the DD Form 250 or the DD Form 1155 by the CAO. In no case, however, will an alert be generated when the shipment date is more than 30 days past. In such cases, a written document (letter, teletype message, or facsimile) must be used.
- Preparation of Acceptance Alerts - Each line item requires an individual acceptance alert. However, the DFAS may include more than one alert in a TS 856 IC - Acceptance Alert (appendix 5A).
- Control Elements - The following fields represent control elements for relating acceptance alerts with acceptance reports, and for discretely identifying one alert from another:

PIIN
Call/Order Number
Ship-To Identity
Contractor Shipment Number
Contractor Shipment Number Suffix
ELIN or CLIN

5.5 ACCEPTANCE REPORT

The TS 861 IC - Acceptance Report (appendix 5B) is the means by which the receiving activity notifies the DFAS disbursing officer that acceptance has been accomplished at destination and of the quantities accepted.

- Inspection is a prerequisite to acceptance. When the receiving activity forwards an report to DFAS it indicates that inspection (i.e., quality assurance) has been accomplished, either at source or at destination. The acceptance report replaces the acceptance copy of the DD Form 250 or DD Form 1155 for the DFAS disbursing officer. The receiving activity will not mail a signed copy of the acceptance document to the DFAS office.
- Retention of Acceptance Documents - No routine external distribution of the DD Form 250 or the DD Form 1155 will be made by the accepting activity. A signed copy of the acceptance document will be retained in the files of the accepting activity. These documents will be retained in support of the report in accordance with contract records retention plans currently employed by each Service/Agency.
- Internal Control Requirements - To ensure that it does not issue a fraudulent acceptance report, the accepting activity is responsible for ensuring that its data system complies with the internal control requirements of chapter 14 of the DoD Accounting Manual. These requirements apply to electronic data systems that are used in lieu of signed hard copy documents.
- Nonreceipt or Late Receipt of the Acceptance Alert - In the event that supplies are received and accepted prior to the receipt of the alert, the accepting activity will prepare the TS 861 IC - Acceptance Report using code "A" in data field BRA04. The accepting activity will not hold the report pending receipt of an alert. If an alert is received after a report has already been transmitted, no action is required.
- Quantity Discrepancies - The acceptance report provides for reporting both the quantity documented on the DD Form 250 or the DD Form 1155 as shipped, and the quantity that the Government representative accepted. As information for the CAO, the major reason for the difference is included in the report using the appropriate Shipment Acceptance Discrepancy Explanation code citing the specific reason.
- Interim Acceptance Report - Interim reports are submitted under the following conditions:
 - Acceptance Delayed - In the event that inspection and/or acceptance at destination requires extensive testing or other prolonged processes, the accepting activity will forward an interim report with an estimated date of acceptance. The quantity accepted field will be zero. To indicate that this is an interim report include Transaction Status Indicator code D. The normal report will be forwarded upon completion of the acceptance.
 - Undelivered Shipment - Upon receipt of a followup request prior to the material being delivered, the accepting activity will forward an interim report. Include a Shipment Acceptance Discrepancy Explanation code U to indicate that the material is undelivered. Also include a Transaction Status Indicator code D to indicate that it is an interim report. The normal report will be forwarded upon completion of the acceptance.

- Time Standards - The receiving activity will forward the acceptance report within 5 workdays after date of delivery. An acceptance report will be prepared for each line item on the shipping document (DD Form 250 or DD Form 1155) as discussed in paragraph 5.9, below.
- Preparation of Acceptance Reports - Each line item requires an individual acceptance. However, a receiving activity may report more than one acceptance in a TS 861 IC - Acceptance Report (appendix 5B).
- Control Elements - The following fields represent control elements for relating individual alerts and reports, and for discretely identifying one report from another:

PIIN
Call/Order Number
Ship-To Identity
Contractor Shipment Number
Contractor Shipment Number Suffix
ELIN or CLIN

5.6 FOLLOWUP

The DFAS will forward a followup to the consignee when an report has not been received within a reasonable length of time.

- Followup Request - A reasonable length of time will be determined by adding to the date of shipment the normal delivery time to the destination by the mode of transportation and 7 workdays for accepting the material and forwarding the acceptance report. A followup acceptance alert will include a Transaction Status Indicator code 1 for the first followup or 2 for the second followup. If a subsequent followup is necessary, it will be in the form of a narrative teletype message or facsimile transmitted from the DFAS to the designated acceptance activity. The message will cite the basic information contained in the initial acceptance alert and, in addition, will contain a short narrative in regard to the acceptance responsibility.
- Followup Reply - When an acceptance report is submitted subsequent to the receipt of a followup, the report will include a Transaction Status Indicator code A or D, as follows:
 - If the reply is an interim report, enter code D.
 - If the reply is not interim but acceptance has been reported previously or is being reported initially, enter code A.

5.7 CANCELLATIONS AND CORRECTIONS

Conditions may arise that necessitate the cancellation of an acceptance report. When cancellation is necessary, the accepting activity will prepare the report and include a Transaction Status Indicator code K to indicate that it is a cancellation. Incorrect acceptance alerts will not be cancelled.

The accepting activity will prepare a corrected report in the appropriate format and will include a Transaction Status Indicator code C to indicate that it is a corrected report.

The DFAS may request retransmission of an acceptance report by preparing an acceptance alert to include a Transaction Status Indicator code E. The receiving activity will prepare a new acceptance report from the source document and forward it to the DFAS. This acceptance will contain a Transaction Status Indicator code C to indicate a corrected report. If a further question exists, the DFAS will communicate by message or telephone to resolve the issue.

5.8 EXEMPTIONS AND EXCLUSIONS

The Air Force acceptance activities using AMIS, are exempted from receipt of TS 856 IC - Acceptance Alert and follow-on preparation of TS 861 IC - Acceptance Report. The DFAS sends a teletype message to the Air Force receiving activities and the Air Force sends an acceptance DD Form 250 to the DFAS.

5.9 PREPARATION OF THE TRANSACTIONS

Any number of either acceptance alerts or acceptance reports, going to the same addressee, may be included in the same transaction set.

The SPIIN used in these transactions is the four-position call/order number; the data field, PRF02, will only be used when a call/order number applies. The SPIIN does not include a modification number or a provisioning item order number.

Use TS 856 IC - Acceptance Alert, as shown at appendix 5A.

- This transaction set contains three tables.
 - Table 1 identifies the transaction as an Acceptance Alert and contains the transaction date.
 - The transaction date is carried in BSN03 and will apply to all reports.
 - Table 2 is controlled by HL loops. Multiple alerts are included by multiple iterations of the HL loop.
 - Table 3 is the usual transaction set trailer.
- The HL loop in table 2 contains three levels of data.
 - The first or highest level is the address loop; the second level is the shipment loop; and the third level is the line item loop.
 - There will be one address loop; it will identify code FR (from the DFAS) and code TO (to the consignee) location codes in the transaction set.
 - There will be one shipment loop for each shipment number in the transaction set.

- .. There will be one line item loop for each CLIN/ELIN in the shipment. As in a contract, the CLIN or subCLIN may be further subdivided by ship-to or requisition number, each needing its own line item loop.
- ... Generally, an item in the acceptance alert is identified by a national stock number. When the national stock number is not available a local stock number should be used. When neither stock number is available use the manufacturer's part number (this requires two iterations, one for the part number and another for the CAGE). When none of the above information is not available use code ZZ and follow the LIN02 note in appendix 5A.
- ... A shipment date may be actual or estimated.
- ... The inclusion of a Cash Discount Stipulation code D advises the consignee that acceptance should be expedited.
- ... When quality assurance is to be performed at destination, use Quality Assurance code D; otherwise, use Quality Assurance code S.
- ... The inclusion of the Liquidated Damages Clause, i.e., Special Contract Provisions code A, advises the consignee that acceptance should be expedited.

Use TS 861 IC - Acceptance Report as shown at appendix 5B.

- This transaction set contains three tables. Data segments REF, DTM, PRF, LM, and LQ are contained in both table 1 and table 2. These segments are used in table 1 when table 2 data is common to all or most of the reports in table 2, with override of the exception data within the applicable loop.
 - .. Table 1 contains common data (e.g., the activity sending the acceptance report, the DFAS office receiving the report, and other common data).
 - .. Table 2 contains the individual acceptance reports, one loop for each report.
 - .. Table 3 is the usual transaction set trailer.
- The acceptance report will not usually include a Transaction Status Indicator code in an LQ data segment. However, a reply to a previous request will use Transaction Status Indicator code A; a corrected acceptance report will contain a Transaction Status Indicator code C; an interim reply will contain a Transaction Status Indicator code D; and a cancelled acceptance report will contain a Transaction Status Indicator code K.

APPENDIX 5A

**TRANSACTION SET 856 IMPLEMENTATION CONVENTION
ACCEPTANCE ALERT**

856 Ship Notice/Manifest

This Draft Standard for Trial Use contains the format and establishes the data contents of the Ship Notice/Manifest Transaction Set (856) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to list the contents of a shipment of goods as well as additional information relating to the shipment, such as order information, product description, physical characteristics, type of packaging, marking, carrier information, and configuration of goods within the transportation equipment. The transaction set enables the sender to describe the contents and configuration of a shipment in various levels of detail and provides an ordered flexibility to convey information.

The sender of this transaction is the organization responsible for detailing and communicating the contents of a shipment, or shipments, to one or more receivers of the transaction set. The receiver of this transaction set can be any organization having an interest in the contents of a shipment or information about the contents of a shipment.

Implementation Notes

1. CAOs use this transaction set to notify ship-to addressees of material shipments requiring acceptance at destination.
2. Use a single occurrence of this transaction set to transmit destination acceptance alerts for one or more shipments. Use one occurrence of this transaction set to transmit a single or multiple transactions.
3. Only use this transaction set to identify destination acceptance alerts for contracts assigned to DFAS for payment.

N/U	010	CTT	Transaction Totals	O	1	
19	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

2/010 The HL segment is the only mandatory segment within the HL loop, and by itself, the HL segment has no meaning.

3/010 Number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of units shipped (SN102) for each SN1 segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 856 X12.10 Ship Notice/Manifest	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: **BSN** Beginning Segment for Ship Notice

Level: Header

Loop: _____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To transmit identifying numbers, dates and other basic data relating to the transaction set

Syntax: **C0706** — If BSN07 is present, then BSN06 is required.

Semantic: 1. BSN03 is the date the shipment transaction set is created.
2. BSN04 is the time the shipment transaction set is created.
3. BSN06 is limited to shipment related codes

Comment: BSN06 and BSN07 differentiate the functionality of use for the transaction set

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	BSN01	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original Code Value Implementation Note: <i>Use in all destination acceptance alerts.</i>	M	ID	2/2
Mandatory	BSN02	396	Shipment Identification A unique control number assigned by the original shipper to identify a specific shipment. Implementation Note: <i>Use ZZ for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The ZZ entry satisfies the X12 usage requirements; the receiving application software shall not process it.</i>	M	AN	2/30
Mandatory	BSN03	373	Date Date (YYMMDD).	M	DT	6/6
Mandatory	BSN04	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) Implementation Notes: 1. Express the originating activity's time in GMT. 2. Express time in a four-position (HHMM) format.	M	TM	4/8
Not Used	BSN05	1005	Hierarchical Structure Code	O	ID	4/4

Required	BSN06	640	Transaction Type Code	C	ID	2/2
			Code specifying the type of transaction.			

Implementation Note:

Use when the transaction set contains one or more destination acceptance alerts.

U4 Acceptance Alert

Not Used	BSN07	641	Status Reason Code	O	ID	3/3
----------	-------	-----	--------------------	---	----	-----

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** 200000

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. Iterations of the 2/HL/010 loop provide destination acceptance alert data structured in a heirarchical logic consisting of: address, shipment and line item information.

2. Must use the first 2/HL/010 loop iteration as the address loop. Use the second iteration as the shipment loop to provide information common to all line items. Must use the third and, if applicable, subsequent loop iterations as the line item loop. Repeat the shipment and line item loops to identify additional destination acceptance alerts.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O	AN	1/12
Implementation Notes: 1. Do not use in 2/HL/010 address loops. Use in 2/HL/010 shipment loop iteration to identify the address loop associated with each shipment. Also use for each 2/HL/010 line item loop iteration to identify the shipment loop associated with each line item. 2. Cite the sequential serial number assigned in HL01 of the 2/HL/010 address loop to identify the shipment associated with the address. Cite the sequential serial number assigned in HL01 of the 2/HL/010 shipment loop to identify the line item associated with the shipment level loop. Citing the applicable information in this fashion provides a cross-reference for all address, shipment, and line item information contained in the destination acceptance alert transaction set.						
Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure. I Item Code Value Implementation Note: Use to identify the individual line item loops. S Shipment Code Value Implementation Note: Use to identify the individual shipment loops. V Address Information Code Value Implementation Note: Use to identify the transaction set address loop.	M	ID	1/2
Not Used	HL04	736	Hierarchical Child Code	O	ID	1/1

Optional

Segment: LIN Item Identification

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

Syntax:

1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

Comments:

1. See the Data Dictionary for a complete list of ID's.
2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use the 2/LIN/020 segment in 2/HL/010 line item loops to cite a line item, and to identify only one national or local stock number, or manufacturer's part number.
2. Must use at least one iteration of this segment to identify the line item.
3. If the line item cannot be described using one of the listed stock or part number codes, LIN02/03 must still be used to satisfy X12 standards.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Required	LIN01	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O	AN	1/11
	Implementation Note: Use to identify the CLIN, (including the SUBCLIN, ELIN, or SUBELIN) as applicable.					
Mandatory	LIN02	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	M	ID	2/2
	Implementation Notes: 1. Use codes FS, MG, or SW to identify material. Must use only one code in each use of the 2/LIN/020 segment. 2. Use PD for this data element when the line item cannot be identified by using one of the other listed codes. Use Z in LIN03. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirement; the receiving application software shall not process it. FS National Stock Number Code Value Implementation Note: Must use the NSN when known. MG Manufacturer's Part Number Code Value Implementation Note: Use as needed to identify the manufacturer's part number. When using, there must be an additional occurrence of a 235/234 pair citing code ZB to identify the manufacturer's CAGE code. PD Part Number Description Code Value Implementation Note: Use the letter Z in LIN03 to indicate "See Contract" when the item can not be described by one of the other codes. SW Stock Number Code Value Implementation Note: Use to identify a local stock number. ZB Commercial and Government Entity (CAGE) Code Code Value Implementation Note: Use to identify a manufacturer's CAGE code only when a 235/234 pair cites code MG.					
Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Conditional	LIN04	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2

Segment: SN1 Item Detail (Shipment)
Level: Detail
Loop: HL
Usage: Optional
Max Use: 1
Purpose: To specify line item detail relative to shipment
Syntax: P0506 — If either SN105 or SN106 is present, then the other is required.
Semantic: SN101 is the ship notice line item identification.
Comment: SN103 defines the unit of measurement for both SN102 and SN104.

Implementation Note:

Use the 2/SN1/030 segment only in 2/HL/010 line item loops to identify the material shipment quantity.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Not Used	SN101	350	Assigned Identification	O	AN	1/11
Mandatory	SN102	382	Number of Units Shipped Numeric value of units shipped in manufacturer's shipping units for a line item or transaction set.	M	R	1/10
Implementation Notes: 1. Use to identify the quantity shipped. 2. Express quantity as a whole number with no decimals. For example, if the quantity is 20, cite only 20.						
Mandatory	SN103	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	M	ID	2/2
Implementation Note: Use to identify the purchase unit for the quantity shipped or service performed. (See the unit of issue conversion table in volume 1, chapter 10).						
Not Used	SN104	646	Quantity Shipped to Date	O	R	1/9
Not Used	SN105	330	Quantity Ordered	C	R	1/9
Not Used	SN106	355	Unit or Basis for Measurement Code	C	ID	2/2
Not Used	SN107	728	Returnable Container Load Make-Up Code	O	ID	1/2
Not Used	SN108	668	Line Item Status Code	O	ID	2/2

Optional

Segment: PRF Purchase Order Reference

Level: Detail

Loop: HL

Usage: Optional

Max Use: 1

Purpose: To provide reference to a specific purchase order

Semantic: PRF04 is the date assigned by the purchaser to purchase order.

Implementation Notes:

1. Use the 2/PRF/050 segment in each 2/HL/010 shipment loop to identify contract information.
2. Use to identify the PIIN and, if applicable, the SPIIN. Do not include the modification number, if applicable.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PRF01	324	Purchase Order Number Identifying number for Purchase Order assigned by the orderer/purchaser.	M AN 1/22
	Implementation Note: Use to identify the PIIN of the contract or order.			
Optional	PRF02	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O AN 1/30
	Implementation Note: Use to identify a four-position SPIIN call/order number. Do not include the modification number.			
Not Used	PRF03	327	Change Order Sequence Number	O AN 1/8
Not Used	PRF04	373	Date	O DT 6/6
Not Used	PRF05	350	Assigned Identification	O AN 1/11
Not Used	PRF06	367	Contract Number	O AN 1/30
Not Used	PRF07	92	Purchase Order Type Code	O ID 2/2

Optional

Segment: REF Reference Numbers**Level:** Detail**Loop:** HL**Usage:** Optional**Max Use:** >1**Purpose:** To specify identifying numbers.**Syntax:** R0203 — At least one of REF02 or REF03 is required.**Implementation Notes:**

1. Use in the 2/HL/010 shipment loop to identify the shipment number assigned by the contractor, and if applicable, the suffix associated with the shipment number.
2. Use in the 2/HL/010 line item loop to identify the transaction number (i.e., the requisition number) and if applicable, the requisition number suffix.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

55 Sequence Number

Code Value Implementation Note:

Use, if applicable, in 2/HL/010 shipment loops to identify the suffix letter associated with a replacement shipment (e.g., when transmitting the letter A to indicate the first replacement shipment).

FS Final Sequence Number

Code Value Implementation Note:

Use, if applicable, in the 2/HL/010 shipment loop to identify the suffix associated with a final shipment number (e.g., when transmitting the letter Z to indicate a final shipment).

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Must use to identify the shipment number.

TN Transaction Reference Number

Code Value Implementation Note:

Use as needed to identify the transaction number (i.e., the requisition number).

W8 Suffix

Code Value Implementation Note:

Use as needed to identify the suffix associated with the transaction number.

Required

REF02	127	Reference Number	C	AN	1/30
Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.					

Not Used

REF03	352	Description	C	AN	1/80
-------	-----	-------------	---	----	------

Optional

Segment: **DTM** Date/Time Reference

Level: Detail

Loop: HL

Usage: Optional

Max Use: 10

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use in the 2/HL/010 shipment loop to identify either the actual or estimated date of material shipment when the same date applies to all line items cited in the 2/HL/010 line item loops.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time.	M	ID	3/3
	Implementation Note: <i>Use only one code in 2/HL/010 shipment loops.</i>					
			011 Shipped			
			Code Value Implementation Note: <i>Use to indicate the applicable line item has been shipped.</i>			
			139 Estimated			
			Code Value Implementation Note: <i>Use to indicate the applicable line item has an estimated shipping date.</i>			
Conditional	DTM02	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	DTM03	337	Time	C	TM	4/8
Not Used	DTM04	623	Time Code	O	ID	2/2
Not Used	DTM05	624	Century	O	NO	2/2
Not Used	DTM06	1250	Date Time Period Format Qualifier	C	ID	2/3
Not Used	DTM07	1251	Date Time Period	C	AN	1/35

Optional

Segment: N1 Name**Level:** Detail**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 2/N1/220 loop in the 2/HL/010 address loop to identify the ADP point of the CAO originating the transaction set.

2. Use the 2/N1/220 loop in the 2/HL/010 address loop to identify the acceptance activity (ship-to address) receiving the transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual CJ Automated Data Processing (ADP) Point Code Value Implementation Note: Use to identify a DFAS ADP point through which a subsequent acceptance report will be forwarded. CN Consignee Code Value Implementation Note: Use to identify the shipment consignee.	M ID 2/2
N102	93	Name	C AN 1/35
N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C ID 1/2
N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
N105	706	Entity Relationship Code	O ID 2/2
N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O ID 2/2

Not Used

Required

Required

Not Used

Optional

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 2/N101/220 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 2/LM/340 loop in 2/HL/010 shipment loops to identify, as applicable, the PQA site, liquidated damages clause, cash discount stipulation, and TSI, as DoD coded data, when the same code value applies to all line items cited in 2/HL/010 line item loops. Use the 2/LM/340 loop in 2/HL/010 line item loops to identify coded data which varies by line item.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

			10 Transaction Status Indicator Code		
			Code Value Implementation Note:		
			Use to identify the status of destination acceptance alert transactions.		
			16 Cash Discount Stipulation Code		
			Code Value Implementation Note:		
			Use to identify to the consignee that a cash discount applies and acceptance should be expedited.		
			6 Special Contract Provision Code		
			Code Value Implementation Note:		
			Use to indicate that the contract contains a liquidated damages clause and acceptance should be expedited.		
			7 Quality Assurance Site Code		
			Code Value Implementation Note:		
			Use to identify the quality assurance performance location.		
Required	LQ02	1271	Industry Code	C	AN 1/20
			Code indicating a code from a specific industry code list		

Segment: **SE** Transaction Set Trailer

Level: Summary

Loop: ____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

APPENDIX 5B

**TRANSACTION SET 861 IMPLEMENTATION CONVENTION
ACCEPTANCE REPORT**

861 Receiving Advice/Acceptance Certificate

This Draft Standard for Trial Use contains the format and establishes the data contents of the Receiving Advice/Acceptance Certificate Transaction Set (861) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide for customary and established business and industry practice relative to the notification of receipt or formal acceptance of goods and services.

1. Receiving activities use this transaction set to report the acceptance of material at destination.
2. Use a single occurrence of this transaction set to report and cancel destination acceptance information to a CAO, even when the originating activity is not in receipt of an acceptance alert.
3. Use one occurrence of this transaction set to transmit a single or multiple original and cancellation acceptance reports.

Table 3

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT
N/U	010	CTT	Transaction Totals	O	1	
21	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

1/020 This transaction set is a receiving advice unless BRA04 contains a value of "8". When BRA04 contains a value of "8", the transaction set is an Acceptance Certificate and the units received is the units accepted.

3/010 The number of line items (CTT01) is the accumulation of the number of RCD segments. If used, hash total (CTT02) is the sum of the value of quantities received (RCD02) for each RCD segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
	861	X12.12 Receiving Advice			

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9
------	-----	--	---	----	-----

**Segment: BRA Beginning Segment for Receiving Advice or
Acceptance Certificate**

Level: Header

Loop: ____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of a receiving advice or acceptance certificate transaction set and to transmit an identifying number, date and time

Semantic: 1. BRA02 is the date that the receiving advice transaction set is created.
2. BRA05 is the time that the receiving advice transaction set is created.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BRA01 127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	M AN 1/30
		Implementation Note: Use Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.	
Mandatory	BRA02 373	Date Date (YYMMDD).	M DT 6/6
		Implementation Note: Express the originating activity's date in GMT.	
Mandatory	BRA03 353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original	M ID 2/2
		Code Value Implementation Note: Use regardless of the type of acceptance report.	
Mandatory	BRA04 962	Receiving Advice or Acceptance Certificate Type Code Code specifying type of receiving advice	M ID 1/1
		Implementation Note: Use when the transaction set contains one or more reports, regardless of the type of acceptance report. 9 Authorized Representative in Receipt of an Acceptance Alert Code Value Implementation Note: Use to identify a party in receipt of an acceptance alert. A Authorized Representative Not in Receipt of an Acceptance Alert Code Value Implementation Note: Use to identify a party not in receipt of an acceptance alert.	

Required

BRA05 337 Time

O TM 4/8

Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)

Implementation Notes:

1. Express the originating activity's time in GMT.
2. Express time in a four-position (HHMM) format.

Not Used

BRA06 412 Receiving Condition Code

O ID 2/2

Not Used

BRA07 306 Action Code

O ID 1/2

Optional

Segment: REF Reference Numbers

Level: Header

Loop: _____

Usage: Optional

Max Use: >1

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Use this 1/REF/050 loop to indicate a reference number when an REF01 qualifier code (e.g., 55) applies to ALL table 2 iterations and the same reference number (REF02 value) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the reference number is to differ from the one indicated in table 1, use the 2/REF/070 loop and specify the matching qualifier in REF01 and the different reference number in REF02. This reference number will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/REF01/050 that does not apply to all of the table 2 iterations. (Codes subject to override: 55, FS, and SI.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

55 Sequence Number

Code Value Implementation Note:

Use, if applicable, to identify the suffix letter associated with a replacement shipment (e.g., when transmitting the letter A to indicate the first replacement shipment).

FS Final Sequence Number

Code Value Implementation Note:

Use, if applicable, to identify the final shipment suffix Z.

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Use to identify the shipment number.

Required

REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
-------	-----	---	---	----	------

Not Used

REF03	352	Description	C	AN	1/80
-------	-----	-------------	---	----	------

Segment: DTM Date/Time Reference
Level: Header
Loop: ____
Usage: Mandatory
Max Use: 10
Purpose: To specify pertinent dates and times
Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Implementation Note:

Use this 1/DTM/070 segment to indicate the date when a DTM01 qualifier code (e.g., 018) applies to ALL table 2 iterations and the same DTM02 date applies to all or most of the table 2 iterations. For any specific table 2 iteration where the date is to differ from the one indicated in table 1, use the 2/DTM/090 segment and specify the matching qualifier in DTM01 and the different date in DTM02. This date will override the table 1 date for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/DTM/070 that does not apply to all of the table 2 iterations. (Codes subject to override: 018, 035, 144, and 201.)

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	DTM01	374 Date/Time Qualifier Code specifying type of date or time, or both date and time. 018 Available/Constructive Placement Code Value Implementation Note: Use to indicate the material was offered for delivery. 035 Delivered Code Value Implementation Note: Use to indicate the material was delivered. 144 Estimated Acceptance Code Value Implementation Note: Use to indicate the material has an estimated acceptance date, when transmitting an interim report. 201 Acceptance Code Value Implementation Note: Use to indicate the material was accepted. Segment: **PRF** Purchase Order Reference
Level: Header
Loop: _____
Usage: Optional
Max Use: 25
Purpose: To provide reference to a specific purchase order
Semantic: PRF04 is the date assigned by the purchaser to purchase order.

Implementation Note:

Use the 1/PRF/080 to indicate contract information when the same contract number and SPIIN, if applicable, applies to all or most of the line items cited in RCD01. When the contract information for any 2/PRF/100 segment differs from the contract information cited in the 1/PRF/080 segment, use the 2/PRF/100 segment to identify the different contract information. In this situation, the 2/PRF/100 segment overrides and takes precedence over the 1/PRF/080 segment. (See override discussion in volume 1, chapter 10).

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PRF01	324	Purchase Order Number Identifying number for Purchase Order assigned by the orderer/purchaser.	M AN 1/22
	Implementation Note: Use to identify the PIIN contract number of the contract or order.			
Optional	PRF02	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O AN 1/30
	Implementation Note: Use to identify a four-position SPIIN call/order number. Do not include a modification or provisioned item order number.			
Not Used	PRF03	327	Change Order Sequence Number	O AN 1/8
Not Used	PRF04	373	Date	O DT 6/6
Not Used	PRF05	350	Assigned Identification	O AN 1/11
Not Used	PRF06	367	Contract Number	O AN 1/30
Not Used	PRF07	92	Purchase Order Type Code	O ID 2/2

Required

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use in all transactions. Use the 1/N1/I30 loop to identify the ship-to address originating this transaction set.

2. Use the 1/N1/I30 loop to identify the DFAS ADP point to receive the transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2

Code identifying an organizational entity, a physical location, or an individual

CJ Automated Data Processing (ADP) Point**Code Value Implementation Note:**

Use to identify the DFAS ADP point receiving the transaction set.

ST Ship To**Code Value Implementation Note:**

Use to identify the ship-to address originating the transaction set.

Not Used

N102	93	Name	C AN 1/35
------	----	------	-----------

Required

N103	66	Identification Code Qualifier	C ID 1/2
------	----	-------------------------------	----------

Code designating the system/method of code structure used for Identification Code (67).

10 Department of Defense Activity Address Code (DODAAC)**M4** Department of Defense Routing Identifier Code (RIC)

Required

N104	67	Identification Code	C AN 2/20
------	----	---------------------	-----------

Code identifying a party or other code.

Not Used

N105	706	Entity Relationship Code	O ID 2/2
------	-----	--------------------------	----------

Optional

N106	98	Entity Identifier Code	O ID 2/2
------	----	------------------------	----------

Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/130 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/200 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 10) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/185 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 data for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/210 that does not apply to all the table 2 iterations. (Codes subject to override: 0, 10, and 17.)

Segment: PRF Purchase Order Reference
Level: Detail
Loop: RCD
Usage: Optional
Max Use: 25
Purpose: To provide reference to a specific purchase order
Semantic: PRF04 is the date assigned by the purchaser to purchase order.

Implementation Note:

Use the 2/PRF/100 segment in 2/RCD/010 loops to identify the PIIN and, if applicable, the SPIIN when the numbers vary by line item. In this situation, the 2/PRF/100 segment overrides and takes precedence over the 1/PRF/080 segment. Do not include the modification or provisioned item order number, if applicable. Do not use the 2/PRF/100 segment if the 1/PRF/080 segment cites the correct number.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PRF01	324	Purchase Order Number Identifying number for Purchase Order assigned by the orderer/purchaser.	M AN 1/22
			Implementation Note: Use to identify the PIIN contract number of the contract or order.	
Optional	PRF02	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O AN 1/30
			Implementation Note: Use to identify a four-position SPIIN call/order number. Do not include a modification or provisioned item order number.	
Not Used	PRF03	327	Change Order Sequence Number	O AN 1/8
Not Used	PRF04	373	Date	O DT 6/6
Not Used	PRF05	350	Assigned Identification	O AN 1/11

Mandatory	SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

6 REVISED DELIVERY FORECAST

6.1 GENERAL

This chapter prescribes procedures for the CAO to report anticipated or actual deviations from the contract delivery schedule. The RDF report is to provide the PO with timely information concerning any delay in the contract delivery schedule. The report should provide the major cause of deviation and a revised delivery date. These procedures will not be used for services line items or when progress reports are required by the contract. In the case of requisitions, the RDF report provides the information required for the preparation of supply status.

6.2 FLOW AND DISTRIBUTION

The RDF flows from the CAO to the PO that issued the contract or order under the contract. In those cases where the CAO issued the order, the RDF flows to the office that authorized the CAO to issue the order. In no case will the CAO send the RDF to more than one point for the same line item. Further distribution may be accomplished internally within the Service/Agency.

6.3 FORECAST DELIVERY DATE

The FDD is the CAO's best estimate as to when the quantity of a line item, that is scheduled under the CDD and the Ship-To, will be delivered to the FOB point. When the FOB point is at destination, the transportation time from the contractor to the destination must be considered in determining the delay and in forecasting a revised delivery date. For the RDF to be effectively used, the FDD must be as accurate as possible. The FDD is memorandum information and does not replace or revise the CDD which can only be changed by a contract modification.

6.4 REASON FOR REVISION

Each RDF report will include codes in an LQ data segment, that identify who and what caused the delay. The purpose of these codes is to explain the difference between the scheduled CDD and the FDD. In those instances when the revision is based upon more than one factor, the major or most significant reason will be indicated.

6.5 RECOMMENDED ACTION

When delivery is delayed or is anticipated to be delayed, the Recommendations Regarding Delayed Deliveries code of the RDF report serves as a notice of action that the CAO is taking or is recommending to the PO. When appropriate, the CAO will provide by correspondence, such as DD Form 375, Production Progress Report, detailed information for the PO to determine the proper course of action.

6.6 URGENCY OF PROCUREMENT

The PO usually assigns a Criticality Designator (see code 5 of the Code List Qualifier Codes discussed in volume 1) code to the contract. This code is perpetuated in the TS 561 IC - Contract Abstract (appendix 2A) in an LQ data segment. For contracts with Criticality Designator code A or B, the RDF will be issued no later than the CDD (or FDD, if applicable); for Criticality Designator C, the RDF will be issued within 30 workdays of the CDD (or FDD, if applicable).

6.7 REVISED DELIVERY FORECAST

The following items should be considered in the development of an RDF report:

- Initiation of an RDF report - For each deliverable item that requires a DD Form 250, the CAO will prepare an RDF report and forward it to the PO when a delivery delay beyond the CDD (or FDD, if applicable) either exists or is anticipated.
- Time Standard - The CAO must issue the RDF within 2 workdays after determination that there will be a delivery delay.
- Preparation of an RDF report - The CAO will prepare a separate report for each affected Ship-To address within the timeframes specified in paragraph 6.6, above. Stock numbered RDF reports (for Navy and DLA) will use Status Report code 10; requisition numbered RDF reports (for Army and Air Force) will use Status Report code 11.
- Control Elements - The following fields represent control elements to discretely identify one RDF report from another:

PIIN
Call/Order Number
CLIN or ELIN
Ship-To Identity
Delivery Schedule Date
Transaction Reference Number (i.e., the requisition number)
Transaction Date

6.8 CHANGES, CORRECTIONS, AND CANCELLATIONS

A change or correction to an RDF report is prepared in the same manner as the original report with a new transaction date to reflect the latest status.

There is no cancellation transaction for an RDF report. An incorrect FDD will be revised to reflect the correct FDD. When no FDD is applicable, the correction report will post the CDD to the FDD field.

6.9 TRANSACTION STATUS INDICATOR CODES

When the RDF report is a final reply in response to a request from the PO, it will contain a Transaction Status Indicator code A.

When the RDF report is a correction of a previous report, it will contain a Transaction Status Indicator code C. As described in paragraph 6.8, above, this would occur without cancellation of the previous report.

When the RDF report is an interim reply in response to a request from the PO, it will contain a Transaction Status Indicator code D.

6.10 PREPARATION OF THE TRANSACTION

Use TS 870 IC - Revised Delivery Forecast as shown at appendix 6A.

- Any number of RDF reports, going to the same addressee, can be included in the same transaction set.
- RDF reports for Army and Air Force contain the transaction reference number (the requisition number) in an REF data segment. RDF reports for Navy and DLA contain a national or a local stock number in a PO1 data segment.
- The transaction set contains three tables. Multiple RDF reports are included by multiple iterations of HL loops in table 2.
 - Table 1 identifies:
 - That the transaction set includes RDF reports that are either stock numbered or requisition numbered, in BSR01; and
 - The code FR (from the CAO) and the code TO (to the PO) at 1/N1/050.
 - Table 2 is controlled by HL loops.
 - Multiple records are included by multiple iterations of the HL loop.
 - There is one HL loop for each contract number; the CS data segment identifies the contract number.
 - There will be one HL loop for each line item or deliverable in that contract. The line item HL loop will include HL03 to relate back to the applicable contract loop. The line item loop will also include a PO1 data segment for the CLIN (and NSN when needed); ISR for the FDD; QTY for the quantity.
 - Some data may be at either level. When the data is constant for all the line items it will be carried in the contract level HL loop; when the data is not constant it will be carried in each line item loop. Data segments that may be at either level are: REF for the requisition number, PER for the POC, DTM for the CDD, NI at 2/N1/090 for the ship-to, and LQ for applicable codes.
 - Table 3 is the usual transaction set trailer.

6.11 PCO REPLY TO THE RDF

TS 870 IC - PCO Reply to the RDF (appendix 6B) is an electronic version of the PCO Instructions (blocks 13 and 15) of the DD Form 375-2, Delay In Delivery. While this transaction set has not been affirmed by the acquisition community, it has been developed and is presented here for future implementation.

6.12 FLOW AND DISTRIBUTION

This transaction set flows from the PO to the CAO that issued the original RDF. Further distribution of this information may be accomplished internally within the Service/Agency.

6.13 PCO INSTRUCTION

The PO may use TS 870 IC - PCO Reply to the RDF to acknowledge receipt of the RDF and to issue instructions to the CAO. Each reply report will include an LQ data segment that will identify the PCO instruction.

6.14 CHANGES, CORRECTIONS, AND CANCELLATIONS

A change or correction to a reply report is prepared in the same manner as the original report with a new transaction date to reflect the latest status.

There is no cancellation transaction for a reply report. An incorrect instruction will be revised to reflect the correct instruction.

6.15 PREPARATION OF THE TRANSACTION

Use TS 870 IC - PCO Reply To RDF as shown at appendix 6B.

- Any number of reply reports, going to the same addressee, can be included in the same transaction set.
- Reply reports may contain the transaction reference number (the requisition number) in an REF data segment when such information is pertinent to identifying the delayed quantity.
- The transaction set contains three tables. Multiple reply reports are included by multiple HL loops in table 2.
 - Table 1 identifies:
 - That the reports in the transaction set are PCO responses to RDF, in BSR01; and
 - The FR (from the PO) and the TO (to the CAO) in the N1 data segment.
 - Table 2 is controlled by HL loops.
 - Multiple records are included by multiple iterations of the HL loop.
 - There is one HL loop for each contract number; the CS data segment identifies the contract number.
 - There will be one HL loop for each line item or deliverable in that contract. The line item HL loop will include HL03 to relate back to the applicable contract loop. The line item loop will also include a PO1 data segment for the CLIN (and NSN when needed); ISR for the FDD; QTY for the quantity.

- ... Some data may be at either level. When the data is constant for all the line items it will be carried in the contract level HL loop; when the data is not constant it will be carried in each line item loop. Data segments that may be at either level are: REF for the requisition number, PER for the POC, NI at 2/N1/090 for the ship-to, and LQ for applicable codes.
- .. Table 3 is the usual transaction set trailer.

APPENDIX 6A

**TRANSACTION SET 870 IMPLEMENTATION CONVENTION
REVISED DELIVERY FORECAST**

870 Order Status Report

This Draft Standard for Trial Use contains the format and establishes the data contents of the Order Status Report Transaction Set (870) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report on the current status of a requirement forecast, an entire purchase order, selected line items on a purchase order, selected products/services on a purchase order, or purchase orders for a specific customer in their entirety or on a selection basis. The transaction set can also be used to report on the current status of single or multiple requisitions. The report format allows for the inclusion of "reasons" relative to the status. This transaction set may also be used to update the supplier's scheduled shipment or delivery dates. This transaction set can result from either an inquiry or a prearranged schedule agreed to by the trading partners.

Implementation Notes

1. CAOs use this transaction set to informally advise POs of a delay in a contract delivery schedule.
2. Do not use this transaction set to cancel a previously transmitted RDF. Instead, transmit a corrected RDF containing a new transaction date and the 2/LQ/145 segment.
3. Use a single occurrence of this transaction set to transmit original and correction RDFs to a PO. Use one occurrence of this transaction set to transmit a single or multiple transactions.

Table 1

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT
N/U	010	CTT	Transaction Totals	O	1	
27	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

2/086 Use is limited to intra-organizational transactions.

2/340 The LX loop conveys serial number, lot number, and inventory data.

3/010 The number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of quantities ordered (PO102) for each PO1 segment.

Segment: **ST** Transaction Set Header

Level: Header

Loop: _____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:
See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 870 X12.23 Order Status Report	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BSR Beginning Segment for Order Status Report

Level: Header

Loop: _____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of an Order Status Report.**Semantic:** 1. BSR03 indicates a status report document number assigned by the sender.

2. BSR04 indicates the date of this report from the sender.

3. BSR07 indicates the time of this report from the sender.

4. BSR08 indicates a status report document number assigned by the inquirer.

5. BSR09 indicates the date this report was requested from the sender by the inquirer.

6. BSR10 indicates the time this report was requested from the sender by the inquirer.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BSR01 850	Status Report Code Code indicating the reason for sending the report	M ID 1/2
Implementation Note: Use only one of codes 10 or 11 to indicate that all transactions contained in the transaction set are of the same type.			
10 Revised Delivery Forecast - Stock Number			
Code Value Implementation Note: Use when the transaction set contains stock numbered RDFs for a Navy or DLA PO.			
11 Revised Delivery Forecast - Transaction Number			
Code Value Implementation Note: Use when the transaction set contains transaction numbered RDFs for an Army or Air Force PO.			
Mandatory	BSR02 847	Order/Item Code Code identifying a group of orders and items.	M ID 1/2
Implementation Note: Use a code PO for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The code PO entry satisfies the X12 usage requirements; the receiving application software shall not process it.			
PO Selected Orders - Unshipped Items			
Mandatory	BSR03 127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	M AN 1/30

		Implementation Note: <i>Use a code Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The code Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.</i>			
Mandatory	BSR04 373	Date Date (YYMMDD).	M	DT	6/6
		Implementation Note: <i>Express the originating activity's date of transaction set preparation in GMT.</i>			
Not Used	BSR05 848	Product/Date Code	O	ID	1/2
Not Used	BSR06 849	Location Code	O	ID	1/2
Required	BSR07 337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O	TM	4/8
		Implementation Notes: 1. <i>Express the originating activity's time of transaction set preparation in GMT.</i> 2. <i>Express time in a four-position (HHMM) format.</i>			
Not Used	BSR08 127	Reference Number	O	AN	1/30
Not Used	BSR09 373	Date	O	DT	6/6
Not Used	BSR10 337	Time	O	TM	4/8
Required	BSR11 353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original	O	ID	2/2
		Code Value Implementation Note: <i>Use regardless of the type of RDF transaction.</i>			
Not Used	BSR12 306	Action Code	O	ID	1/2

Optional

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.**Comments:** 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 1/N1/050 loop in every transaction set to identify the CAO originating the transaction.
2. Use the 1/N1/050 loop in every transaction set to identify the PO receiving the transaction set.
3. Use two iterations of the 1/N1/050 loop in every RDF transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual C4 Contract Administration Office Code Value Implementation Note: Use to indicate the organization originating the transaction set. QB Purchase Service Provider Code Value Implementation Note: Use to indicate the organization to receive the transaction set.	M	ID	2/2
Not Used	N102	93 Name	C	AN	1/35
Required	N103	66 Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC)	C	ID	1/2
Required	N104	67 Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706 Entity Relationship Code	O	ID	2/2
Optional	N106	98 Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/050 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information**Level:** Header**Loop:** LM **Repeat:** 10**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Note:**

Use this 1/LM/120 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/144 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. This code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10). Do not cite any qualifier code in 1/LQ01/130 that does not apply to all table 2 iterations. (Codes subject to override: 0.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
LM02	822	Source Subqualifier	O	AN	1/15

Not Used

Mandatory

Segment: LQ Industry Code

Level: Header

Loop: LM

Usage: Mandatory

Max Use: 100

Purpose: Code to transmit standard industry codes

Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code	O	ID	1/3
Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Mandatory

Segment: HL Hierarchical Level**Level:** Detail**Loop:** HL **Repeat:** 1000**Usage:** Mandatory**Max Use:** 1**Purpose:** To identify dependencies among and the content of hierarchically related groups of data segments.**Comments:** 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. Iterations of the 2/HL/010 loop provide RDF transaction data structured in a hierarchical logic consisting of contract and line item information.

2. Must use the first 2/HL/010 loop iteration as the contract loop. Use the second and, if applicable, subsequent loop iterations as the line item loop. Repeat the contract and line item loops to identify additional contract RDFs in the same transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O	AN	1/12
			Implementation Note: <i>Use in every 2/HL/010 line item loop iteration to identify the contract loop with which the current loop is associated. Data element content is the sequential number assigned to the 2/HL/010 contract loop and serves as the cross-reference between the line item and contract information provided in the transaction set.</i>			
Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure. I Item Code Value Implementation Note: <i>Use to identify individual line item data.</i> IB Contract Code Value Implementation Note: <i>Use to identify contract data for the line item.</i>	M	ID	1/2
Not Used	HL04	736	Hierarchical Child Code	O	ID	1/1

Segment: REF Reference Numbers
Level: Detail
Loop: HL
Usage: Optional
Max Use: 12
Purpose: To specify identifying numbers.
Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Use in 2/HL/010 contract loops for Army and Air Force contracts to identify the transaction number and, if applicable, a suffix associated with the transaction number when the same number applies to all line items cited in 2/HL/010 loops. Use in 2/HL/010 line item loops to identify the transaction number and, if applicable, a suffix associated with the transaction number when the number varies by line item.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	REF01	128	Reference Number Qualifier Code qualifying the Reference Number. TN Transaction Reference Number Code Value Implementation Note: Use to identify the transaction number. W8 Suffix Code Value Implementation Note: Use as needed to identify the suffix associated with the transaction number.	M	ID	2/2
Required	REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	REF03	352	Description	C	AN	1/80

Optional

Segment: PER Administrative Communications Contact

Level: Detail

Loop: HL

Usage: Optional

Max Use: 3

Purpose: To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.
2. P0506 — If either PER05 or PER06 is present, then the other is required.
3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use in 2/HL/010 contract loops to identify an ACO.
2. Use in 2/HL/010 contract loops to identify a production representative when the same production representative applies to all of the line items cited in 2/HL/010 loops. Use in 2/HL/010 line item loops when the production representative varies between the line items.
3. Use multiple repetitions as needed to identify an ACO and production representative and multiple communications numbers. When using multiple repetitions to identify different communication numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

Not Used

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
PER01	366	Contact Function Code	M	ID	2/2
		AC Administrative Contracting Officer			
		Code Value Implementation Note:			
		Use to identify the name of the ACO.			
		PO Production Representative			
		Code Value Implementation Note:			
		Use to identify the name of the production representative reporting an RDF.			

Required

PER02	93	Name	O	AN	1/35
		Free-form name.			

Implementation Notes:

1. Use to identify the names of the ACO and production representative reporting an RDF.
2. Provide the last name, first name, middle initial, and rate/rank/title, as needed, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier	C	ID	2/2
		Code identifying the type of communication number.			

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of PER to identify more than 3 numbers.

2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile DSN telephone number.

TE Telephone

Code Value Implementation Note:

Use to identify commercial telephone number. Include area code and number.

Conditional	PER04	364	Communication Number	C	AN	1/80
			Complete communications number including country or area code when applicable.			

Conditional	PER05	365	Communication Number Qualifier	C	ID	2/2
			Code identifying the type of communication number.			

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified POC.

2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile DSN telephone number.

Required

Segment: CS Contract Summary

Level: Detail

Loop: HL

Usage: Optional

Max Use: 3

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

Semantic: 1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.

2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.

3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.

4. CS14 is the Unit of Measure stipulated in the contract.

5. CS15 is the contract line item number (CLIN) unit price specified in the contract.

6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.

7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

Comments: 1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).

2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Use in every 2/HL/010 contract loop to identify the contract number, i.e., PIIN, and, if applicable, the call or order number, or the call or order number including the respective call or order modification, i.e., SPIIN, as applicable.

2. Do not include either the modification or provisioned item order number, if applicable.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the PIIN contract number of the contract or order.

Not Used

CS02	327	Change Order Sequence Number	O AN 1/8
------	-----	------------------------------	----------

Optional	CS03	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O	AN	1/30
<i>Implementation Note:</i> Use to identify a four-position SPIIN call/order number. Do not include either the modification or the provisioned item order number.

Optional

Segment: N1 Name
Level: Detail
Loop: N1 **Repeat:** 200
Usage: Optional
Max Use: 1
Purpose: To identify a party by type of organization, name and code
Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.
Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.
Implementation Note:
Use the 2/N1/090 loop in 2/HL/010 contract loops to identify the ship-to addressee when the same addressee applies to all of the line items cited in 2/HL/010 loops. Use in 2/HL/010 line item loops to identify the ship-to addressees when the addressees vary by line item.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual ST Ship To Code Value Implementation Note: Use to identify the consignee.	M ID 2/2
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) A2 Military Assistance Program Address Code (MAPAC) Code Value Implementation Note: Use to identify an FMS/GA ship-to address.	C ID 1/2
Required	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2
Not Used	N106	98	Entity Identifier Code	O ID 2/2

Optional

Segment: LM Code Source Information**Level:** Detail**Loop:** LM **Repeat:** 10**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Note:**

For any specific table 2 iteration use this 2/LM/144 loop as needed: 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/120 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/120 loop with a different DoD code in the 2/LM/144 loop when the same LQ01 qualifier code is used in both loops but the LQ02 DoD code is different. (Codes subject to override: 0.)

Data Element Summary

Required

Segment: PO1 Baseline Item Data

Level: Detail

Loop: PO1 **Repeat:** 1000

Usage: Optional

Max Use: 1

Purpose: To specify basic and most frequently used line item data

- Syntax:**
1. C0302 — If PO103 is present, then PO102 is required.
 2. C0504 — If PO105 is present, then PO104 is required.
 3. P0607 — If either PO106 or PO107 is present, then the other is required.
 4. P0809 — If either PO108 or PO109 is present, then the other is required.
 5. P1011 — If either PO110 or PO111 is present, then the other is required.
 6. P1213 — If either PO112 or PO113 is present, then the other is required.
 7. P1415 — If either PO114 or PO115 is present, then the other is required.
 8. P1617 — If either PO116 or PO117 is present, then the other is required.
 9. P1819 — If either PO118 or PO119 is present, then the other is required.
 10. P2021 — If either PO120 or PO121 is present, then the other is required.
 11. P2223 — If either PO122 or PO123 is present, then the other is required.
 12. P2425 — If either PO124 or PO125 is present, then the other is required.

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. PO101 is the line item identification
 3. PO106 through PO125 provide for ten (10) different product/service ID's per each item. For example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use in 2/HL/010 line item loops to identify the basic line item number (ELIN or CLIN, including SUBELIN or SUBCLIN, if applicable), against which revised delivery is being forecast.
2. Use as many iterations of this loop as necessary to report line items under a single contract, for which delivery is being revised.
3. Use data element 235/234 pairs, if applicable, to identify cited line items.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	PO101	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O	AN	1/11

Segment: **ISR** Item Status Report
Level: Detail
Loop: ISR **Repeat:** 104
Usage: Optional
Max Use: 1
Purpose: To specify detailed purchase order/item status.
Semantic: If ISR01 specifies a date, ISR02 is required.

Implementation Note:

Use in 2/HL/010 line item loops to cite the forecasted delivery date.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	ISR01	368	Shipment/Order Status Code Code indicating the status of an order or shipment or the disposition of any difference between the quantity ordered and the quantity shipped for a line item or transaction. SI Shipment Late, Scheduled to Ship on (Date) Code Value Implementation Note: <i>Use to identify the forecasted delivery date.</i>	M ID 2/2
Required	ISR02	373	Date Date (YYMMDD).	O DT 6/6
Not Used	ISR03	641	Status Reason Code	O ID 3/3

Optional	Segment: QTY Quantity				
	Level: Detail				
	Loop: ISR				
	Usage: Optional				
	Max Use: 4				
	Purpose: To specify quantity information.				
	Implementation Note: Use in 2/HL/010 line item loops to identify that portion of the quantity cited in the contract delivery schedule affected by the RDF transaction. This quantity cannot exceed the contract quantity for the specified ship-to addressee and scheduled shipment date. The quantity must be specified in terms of the purchase unit contained in the contract.				
	Data Element Summary				
	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
Mandatory	QTY01	673	Quantity Qualifier Code specifying the type of quantity. 40 Remaining Quantity	M	ID 2/2
			Code Value Implementation Note: Use to identify the quantity affected by the RDF.		
Mandatory	QTY02	380	Quantity Numeric value of quantity.	M	R 1/15
			Implementation Note: Express as a whole number without a decimal. For example, if the quantity is 20, cite only 20.		
Optional	QTY03	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	O	ID 2/2
			Implementation Note: The purchase unit specified in the contract. (See the unit of issue conversion table in volume 1, chapter 10). Use only when included in Navy and DLA contracts. Do not use in Army and Air Force contracts.		

Mandatory

Segment: SE Transaction Set Trailer

Level: Summary

Loop: ____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10

------	-----	--	----------

APPENDIX 6B

**TRANSACTION SET 870 IMPLEMENTATION CONVENTION
PCO REPLY TO RDF**

870 Order Status Report

This Draft Standard for Trial Use contains the format and establishes the data contents of the Order Status Report Transaction Set (870) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to report on the current status of a requirement forecast, an entire purchase order, selected line items on a purchase order, selected products/services on a purchase order, or purchase orders for a specific customer in their entirety or on a selection basis. The transaction set can also be used to report on the current status of single or multiple requisitions. The report format allows for the inclusion of "reasons" relative to the status. This transaction set may also be used to update the supplier's scheduled shipment or delivery dates. This transaction set can result from either an inquiry or a prearranged schedule agreed to by the trading partners.

Implementation Notes

1. POs use this transaction set to respond to CAOs submitting RDFs.
2. Do not use this transaction set to cancel a previously transmitted PCO response. Instead, use a corrected PCO response to an RDF containing a new transaction date and a 2/LQ/145 segment.
3. Use a single occurrence of this transaction set to transmit original and correction PCO responses to RDFs to a CAO. Use one occurrence of this transaction set to transmit a single or multiple transactions.

Table 1

Table 3

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT
N/U	010	CTT	Transaction Totals	O	1	
26	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

2/086 Use is limited to intra-organizational transactions.

2/340 The LX loop conveys serial number, lot number, and inventory data.

3/010 The number of line items (CTT01) is the accumulation of the number of HL segments. If used, hash total (CTT02) is the sum of the value of quantities ordered (PO102) for each PO1 segment.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: ____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
		870	X12.23 Order Status Report			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: **BSR** Beginning Segment for Order Status Report

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the beginning of an Order Status Report.

Semantic: 1. BSR03 indicates a status report document number assigned by the sender.

2. BSR04 indicates the date of this report from the sender.

3. BSR07 indicates the time of this report from the sender.

4. BSR08 indicates a status report document number assigned by the inquirer.

5. BSR09 indicates the date this report was requested from the sender by the inquirer.

6. BSR10 indicates the time this report was requested from the sender by the inquirer.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BSR01 850	Status Report Code Code indicating the reason for sending the report	M ID 1/2
Implementation Note: Use to identify the type of RDF contained in the transaction set. 12 Revised Delivery Forecast - Response Code Value Implementation Note: Use to identify a PCO response to an RDF. Must use in each transaction set regardless of type.			
Mandatory	BSR02 847	Order/Item Code Code identifying a group of orders and items.	M ID 1/2
Implementation Note: Use code PO for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. This code PO entry satisfies the X12 usage requirements; the receiving application software shall not process it. PO Selected Orders - Unshipped Items Code Value Implementation Note: Must use in each transaction set, regardless of type, to satisfy X12 usage requirement.			
Mandatory	BSR03 127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	M AN 1/30
Implementation Note: Use code Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The code Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.			

Mandatory	BSR04	373	Date Date (YYMMDD).	M	DT	6/6
Implementation Note: Express the originating activity's date of transaction set preparation in GMT.						
Not Used	BSR05	848	Product/Date Code	O	ID	1/2
Not Used	BSR06	849	Location Code	O	ID	1/2
Required	BSR07	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)	O	TM	4/8
Implementation Notes: 1. Express the originating activity's time of transaction set preparation in GMT. 2. Express time in a four-position (HHMM) format.						
Not Used	BSR08	127	Reference Number	O	AN	1/30
Not Used	BSR09	373	Date	O	DT	6/6
Not Used	BSR10	337	Time	O	TM	4/8
Required	BSR11	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original	O	ID	2/2
Code Value Implementation Note: Use regardless of the type of RDF transaction.						
Not Used	BSR12	306	Action Code	O	ID	1/2

Required

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 200**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.**Comments:** 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 1/N1/050 loop in every transaction set to identify the PO originating the transaction set.
2. Use the 1/N1/050 loop in every transaction set to identify the CAO receiving the transaction set.
3. Use two iterations of the 1/N1/050 loop in every PCO response to an RDF transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual C4 Contract Administration Office Code Value Implementation Note: Use to indicate the organization to receive the transaction set. QB Purchase Service Provider Code Value Implementation Note: Use to indicate the organization originating the transaction set.	M	ID	2/2
Not Used	N102	93 Name	C	AN	1/35
Required	N103	66 Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC)	C	ID	1/2
Required	N104	67 Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706 Entity Relationship Code	O	ID	2/2
Optional	N106	98 Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N101/050 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Must use the 1/LM/144 loop to identify the type of transaction.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

Not Used

------	-----	----------------------------	---	----	------

Mandatory

Segment: LQ Industry Code
Level: Header
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Required	LQ01	1270	Code List Qualifier Code	O	ID	1/3
			Code identifying a specific industry code list			
			0 Document Identification Code			
Required	LQ02	1271	Industry Code	C	AN	1/20
			Code indicating a code from a specific industry code list			

Mandatory

Segment: HL Hierarchical Level

Level: Detail

Loop: HL **Repeat:** 1000

Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of data segments.

Comments: 1. The HL Segment is used to identify levels of detail information using a Hierarchical Structure, such as relating line item data to shipment data, and packaging data to line item data.

2. The HL segment defines a top-down/left-right ordered structure.

3. HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment, and would be incremented by one in each subsequent HL segment within the transaction.

4. HL02 identifies the Hierarchical ID Number of the HL segment to which the current HL segment is subordinate.

5. HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order or item level information.

6. HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

Implementation Notes:

1. Iterations of the 2/HL/010 loop provide PCO responses to RDF transaction data structured in a heirarchical logic consisting of contract and line item information.

2. Must use the first 2/HL/010 loop iteration as the contract loop. Use the second and, if applicable, subsequent loop iterations as the line item loop. Repeat the contract and line item loops to identify additional PCO responses to other contract RDFs in the same transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
HL01	628	Hierarchical ID Number A unique number assigned by the sender to identify a particular data segment in a hierarchical structure.	M AN 1/12

Implementation Note:

In the first 2/HL/010 loop iteration, cite the numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Optional	HL02	734	Hierarchical Parent ID Number Identification number of the next higher hierarchical data segment that the data segment being described is subordinate to.	O	AN	1/12
Implementation Note: <i>Use in every 2/HL/010 line item loop iteration to identify the contract loop with which the current loop is associated. Data element content is the sequential number assigned to the 2/HL/010 contract loop and serves as the cross-reference between the line item and contract information provided in the transaction set.</i>						
Mandatory	HL03	735	Hierarchical Level Code Code defining the characteristic of a level in a hierarchical structure. I Item Code Value Implementation Note: <i>Use to identify individual line item data.</i> IB Contract Code Value Implementation Note: <i>Use to identify contract data for the line item.</i>	M	ID	1/2
Not Used	HL04	736	Hierarchical Child Code	O	ID	1/1

Optional

Segment: REF Reference Numbers

Level: Detail

Loop: HL

Usage: Optional

Max Use: 12

Purpose: To specify identifying numbers.

Syntax: R0203 — At least one of REF02 or REF03 is required.

Implementation Note:

Use in 2/HL/010 contract loops for Army and Air Force contracts to identify a transaction number and, if applicable, a suffix associated with the transaction number when the same number applies to all line items cited in 2/HL/010 loops. Use in 2/HL/010 line item loops to identify the transaction number and, if applicable, a suffix associated with the transaction number when the number varies by line item.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REF01	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

TN Transaction Reference Number

Code Value Implementation Note:

Use to identify the transaction number.

W8 Suffix

Code Value Implementation Note:

Use as needed to identify the suffix associated with the transaction number.

Required

REF02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
-------	-----	---	---	----	------

Not Used

REF03	352	Description	C	AN	1/80
-------	-----	-------------	---	----	------

Optional

Segment: PER Administrative Communications Contact

Level: Detail

Loop: HL

Usage: Optional

Max Use: 3

Purpose: To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.
2. P0506 — If either PER05 or PER06 is present, then the other is required.
3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use, as needed, in 2/HL/010 contract loops to identify the PCO responding to an RDF.
2. When using multiple repetitions to identify different communications numbers repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code	M ID 2/2
		Code identifying the major duty or responsibility of the person or group named.	
		PC Purchasing Contracting Officer (PCO)	

Required

PER02	93	Name	O AN 1/35
		Free-form name.	

Implementation Notes:

1. Use to identify the name of the PCO responding to an RDF.
2. Provide the last name, first name, middle initial, and rate/rank/title, as needed, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier	C ID 2/2
		Code identifying the type of communication number.	

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of the PER segment to identify more than three numbers.
2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

FT Federal Telecommunications System (FTS)

			Code Value Implementation Note: <i>Use to identify the FTS telephone number.</i>			
			FX Facsimile			
			Code Value Implementation Note: <i>Use to identify the facsimile DSN telephone number.</i>			
			TE Telephone			
			Code Value Implementation Note: <i>Use to identify the commercial telephone number. Include the area code and number.</i>			
Conditional	PER04	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
Conditional	PER05	365	Communication Number Qualifier Code identifying the type of communication number.	C	ID	2/2
			Implementation Notes: 1. Use to identify an alternate communications number for a POC. 2. Do not include blank spaces or dashes between numbers.			
			AU Defense Switched Network			
			Code Value Implementation Note: <i>Use to identify the DSN telephone number.</i>			
			EM Electronic Mail			
			FT Federal Telecommunications System (FTS)			
			Code Value Implementation Note: <i>Use to identify the FTS telephone number.</i>			
			FX Facsimile			
			Code Value Implementation Note: <i>Use to identify the facsimile DSN telephone number.</i>			
			TE Telephone			
			Code Value Implementation Note: <i>Use to identify the commercial telephone number. Include the area code and number.</i>			
Conditional	PER06	364	Communication Number Complete communications number including country or area code when applicable.	C	AN	1/80
Conditional	PER07	365	Communication Number Qualifier Code identifying the type of communication number.	X	ID	2/2
			Implementation Notes: 1. Use to identify an alternate communications number for a POC. 2. Do not include blank spaces or dashes between numbers.			
			AU Defense Switched Network			
			Code Value Implementation Note: <i>Use to identify the DSN telephone number.</i>			
			EM Electronic Mail			
			FT Federal Telecommunications System (FTS)			
			Code Value Implementation Note: <i>Use to identify the FTS telephone number.</i>			
			FX Facsimile			

Code Value Implementation Note:

Use to identify the facsimile DSN telephone number.

TE Telephone

Code Value Implementation Note:

Use to identify the commercial telephone number. Include the area code and number.

Conditional	PER08	364	Communication Number Complete communications number including country or area code when applicable.	X	AN	1/80
Not Used	PER09	443	Contact Inquiry Reference	O	AN	1/20

Required

Segment: CS Contract Summary

Level: Detail

Loop: HL

Usage: Optional

Max Use: 3

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

Semantic: 1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.

2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.

3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.

4. CS14 is the Unit of Measure stipulated in the contract.

5. CS15 is the contract line item number (CLIN) unit price specified in the contract.

6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.

7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

Comments: 1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).

2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Use in every 2/HL/010 contract loop to identify the contract number, i.e., PIIN, and the call or order number, or the call or order number including the respective call or order modification, i.e., SPIIN, if applicable.

2. Do not include either the modification or provisioned item order number, if applicable.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the contract number, i.e., PIIN, of the contract or order.

Not Used

CS02	327	Change Order Sequence Number	O AN 1/8
------	-----	------------------------------	----------

Optional	CS03	328	Release Number	O	AN	1/30
			Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.			
	Implementation Note: <i>Use to identify a four-position call or order number, i.e., SPIIN. Do not include either the modification or the provisioned item order number.</i>					
Not Used	CS04	128	Reference Number Qualifier	C	ID	2/2
Not Used	CS05	127	Reference Number	C	AN	1/30
Not Used	CS06	324	Purchase Order Number	O	AN	1/22
Not Used	CS07	560	Special Services Code	O	ID	2/10
Not Used	CS08	433	F.O.B. Point Code	O	ID	2/2

Not Used	CS16	336	Terms Type Code	O	ID	2/2
Not Used	CS17	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	CS18	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: N1 Name

Level: Detail

Loop: N1 **Repeat:** 200

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

Use the 2/N1/090 loop in 2/HL/010 contract loops to identify the contractor associated with the PCO's response to an RDF.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual SE Selling Party Code Value Implementation Note: Use to identify the contractor.	M	ID	2/2

Not Used	N106	98	Entity Identifier Code	O	ID	2/2

Optional

Segment: LM Code Source Information

Level: Detail

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 2/LM/144 loop in 2/HL/010 contract loops to identify DoD unique coded data, when the same code value applies to all of the line items cited in 2/HL/010 loops. Use in 2/HL/010 line item loops to identify coded data when the code value varies by line item.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Segment: LQ Industry Code
Level: Detail
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 10 Transaction Status Indicator Code Code Value Implementation Note: Use as needed in 2/HL/010 contract loops to indicate a status correction of a previously transmitted PCO response to an RDF. Use only when the transaction set is other than an original RDF. Use only when the code is applicable to all cited line items. Use in 2/HL/010 line item loops when the codes differ by line item. Use code C to identify a correction. 29 Purchasing Contract Officer (PCO) Instructions Code Code Value Implementation Note: Use to identify PCO instructions to ACOs for the disposition of previously reported RDFs.	O ID 1/3
Conditional	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20

Optional

Segment: PO1 Baseline Item Data

Level: Detail

Loop: PO1 **Repeat:** 1000

Usage: Optional

Max Use: 1

Purpose: To specify basic and most frequently used line item data

- Syntax:**
1. C0302 — If PO103 is present, then PO102 is required.
 2. C0504 — If PO105 is present, then PO104 is required.
 3. P0607 — If either PO106 or PO107 is present, then the other is required.
 4. P0809 — If either PO108 or PO109 is present, then the other is required.
 5. P1011 — If either PO110 or PO111 is present, then the other is required.
 6. P1213 — If either PO112 or PO113 is present, then the other is required.
 7. P1415 — If either PO114 or PO115 is present, then the other is required.
 8. P1617 — If either PO116 or PO117 is present, then the other is required.
 9. P1819 — If either PO118 or PO119 is present, then the other is required.
 10. P2021 — If either PO120 or PO121 is present, then the other is required.
 11. P2223 — If either PO122 or PO123 is present, then the other is required.
 12. P2425 — If either PO124 or PO125 is present, then the other is required.

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. PO101 is the line item identification
 3. PO106 through PO125 provide for ten (10) different product/service ID's per each item. For example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use in 2/HL/010 line item loops to identify the basic line item number (CLIN, including SUBCLIN, ELIN, or SUBELIN), against which the PCO is responding.
2. Use as many iterations of this loop as necessary to report to line items under a single contract, for which delivery is being revised.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory	SE01	96 Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10
Mandatory	SE02	329 Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

7 CONTRACT PAYMENT AND COLLECTION NOTIFICATION

7.1 GENERAL

This chapter prescribes procedures for the preparation of detail payment/collection data (pertaining to funds cited on contracts) and the transmission of that data from the DFAS to an accountable activity specified by the Service/Agency. All dollar figures are U.S. dollars.

7.2 CONTRACT PAYMENT MANAGEMENT REPORT

TS 568 IC - Contract Payment Management Report is shown at appendix 7A. Table 1 of this report is header data that applies to all of the CPN reports contained in table 2. Each transaction set of CPN reports will contain a batch serial number to be assigned consecutively by the DFAS, beginning at the number 1 on the 1st of October each year for each different accounting point to which CPNs are sent.

The last transmission of CPN reports for the month is identified as an end of month transaction. Each activity that received a CPN report during the month will receive an end of month transaction. When this transaction set contains CPN reports, it is identified as end of month by a Transaction Status Indicator code F in the first CPN report. When the end of month transaction set does not contain CPN reports, it will omit table 2 and, therefore, there will be no Transaction Status Code.

When duplicate or missing CPN reports from a previously transmitted batch are sent, table 1 will contain the batch serial number of the original batch. These will not be combined with other CPN reports in current daily batches.

7.3 CONTRACT PAYMENT NOTICE REPORT

The individual CPN report is the means by which the disbursing element of the DFAS reports contract payment and collection data to the designated accountable activity of the Service/Agency listed in section 7.13 below. As payments and collections are made on public vouchers, a separate CPN report will be generated for each contract and accounting classification cited on the voucher. The DFAS also sends an end of month report (see section 7.2 above) to each accountable activity that received a CPN report during the month. The individual CPN reports and the end of month report are conveyed in TS 568 IC - Contract Payment Management Report.

7.4 PAYMENT/COLLECTION DATA

Each individual CPN report will consist of one large CS loop in table 2. The detail information about the payment or collection that is to be included in the individual CPN report requires loops of data segments within loops of data segments. The CS loop includes:

- Data segments CS, N9, and DTM;
- An LM loop (with data segments LM and LQ) that apply to the entire payment;

- An REF loop (with data segments REF and AT, and LX, LM, and N1 loops);
 - the LX loop (with data segments LX, N9, and AMT);
 - the LM loop (with data segments LM and LQ);
 - the N1 loop (with data segments N1 and N9).

The CS loop has three optional data segments in the beginning of the loop:

- Data segment CS will identify the contract number, the call/order number when applicable, and the voucher number;
- Data segment N9 will identify the original voucher number when applicable; and
- Data Segment DTM will identify the current voucher amount.

Within the CS loop there may be an LM loop for codes that are common to that individual; CPN report. Also, within each CS loop, there will be an REF loop for the applicable ACRN and long line accounting data.

- Within each REF loop there will be at least one LX loop to identify the details of the collection or disbursement.
- The initial LX loop will include, as applicable, details about the payment or collection:
 - Data segment N9 to identify the ELIN, CLIN, or nonCLIN;
 - Data segment AMT to identify the applicable amounts:
 - there will always be either a collected amount or a disbursed amount;
 - there will be a gross amount and a net paid or net collected amount;
 - there may be a deduction amount;
 - there may be a variance amount; and
 - there may be an item gross amount.
 - Data segment QTY is used with item gross amount to identify the item quantity;
 - An LM loop with an LQ code for each applicable amount:
 - a collection amount requires a type of collection code;
 - a disbursed amount requires a contract payment type code;
 - a gross amount requires a contract fund reporting transaction code;
 - a deduction amount requires a contract payment type of deduction code;

- ... a net amount variance requires a contract obligation variance code;
and
- ... an item gross amount requires a contract line item status code.
- .. An N1 loop with an N1 data segment to identify the ship-to and an N9 data segment for the shipment number. This data is furnished only when item gross amount is furnished.
- The line item data (i.e., the item gross amount, the contract line item status, the expenditure quantity, the ship-to, and the shipment number) are used to report on CLINs and ELINs, and to identify deliveries as advance and progress payments are recouped. Line item data is not used on cost type contracts nor on advance or progress payments.
- When more than one deduction or variation applies to the same line, put the second occurrence in another LX loop. When line item data applies to both, it is carried in the first loop.

The following fields are control elements for discretely identifying one individual CPN report from another:

PIIN
Call/Order Number
ACRN
Voucher Number

7.5 ACCOUNTING CLASSIFICATION DATA

The accounting classification data is carried in the REF loop within the CS loop in table 2. It consists of the ACRN (in REF01/REF02) and the related long line accounting data (in AT02 and AT09) that is applicable to the payment and as cited in the contract. This data is also required in a collection transaction (see section 7.11 below). Although the RDF loop does not apply to a dummy end of month report (discussed in section 7.12 below), it is mandatory in all other CPN reports of collected or disbursed funds.

7.6 DETAIL DATA

Within each REF loop there will be one or more LX loops. Each LX loop begins with a control number and furnishes detail data about the disbursement or collection. The first LX loop carries the bulk of the data pertinent to the payment or collection. A second loop, and additional loops if necessary, are used when there is more than one deduction, variance, or line item.

7.7 DISBURSEMENT/COLLECTION DATA

As discussed above, the LX loop will carry the disbursement/collection data. Separate LX loops will report the gross and net amounts applicable to a payment and are mandatory in each CPN. The LM loop will contain specific collection or recoupment data (see paragraph 7.11 below). The Contract Payment Type code distinguishes between an advance payment, a progress payment, a nonCLIN payment, or a delivery payment. Two or more Disbursement/Collections will be furnished when payment made for CLINs and nonCLINs is disbursed on the same voucher.

7.8 DEDUCTION DATA

Deduction data will be included in LM loops within the line or nonCLIN LX loop. The LM loop will include each allowance applied against the gross amount to arrive at the net amount paid or identify amounts previously deducted. This data will be included as part of the CPN when the net amount paid is different from the gross amount because of discounts taken, trade-in allowance, etc. (all minus amounts) or refunds (plus amounts) of previous deductions from gross amounts now being paid. Each deduction or refund will be identified by a type of Contract Deduction code. If applicable, the deduction will cite the exhibit or contract line/subline. Different types of deductions and/or refunds may be reported in multiple LM loops within the applicable line item loop. As many deduction loops as needed will be used. Recoupments of advance and progress payments will be in separate LM loops in accordance with paragraph 7.11. This deduction data should be included when reversing a previous disbursement.

7.9 VARIANCE DATA

A contract obligation variance occurs when the gross and contract amounts (as shown in the disbursement/collection loop) differ. The reason for the difference is explained in the variation loop.

Variance data, i.e., variance between the gross amount of the CPN (as shown in the CS data segment) and the comparable contract amount, will be included in an LX loop. This data will be included as part of the CPN only when such gross and contract amounts differ because of quantity variances (overrun and underrun); unit price variances; added charges for transportation, packing, and handling; reusable containers charges; state and local taxes; royalty payments; and minimum guaranteed payments. Price and quantity variances will be reported at the line item level and may be combined in one LX loop. Transportation, packing and handling, reusable containers charges, state and local taxes, royalty payments, and minimum guaranteed payments will be reported as separate LM loops within a non-CLIN LX loop. Additional variance loops will be used to report the variance types of payments as necessary.

7.10 LINE ITEM REPORT DATA

Line item data will be reported in an LX loop and will include the gross amount for the exhibit or contract line/subline and contractor shipment number to which the CPN applies. Citation of the six-digit line item number, when applicable, permits correlation of the payment to obligation and allotment accounting records maintained by the Army, Navy, Air Force, and DLA.

The contractor shipment number will be as shown on the DD Form 250, or the DD Form 1155 (when used in lieu of DD Form 250), and is provided to enable correlation of the payment notice document with the related delivery. Line item data will not be provided on cost type payments or on initial advance and progress payments. The line item data will, however, be furnished as subsequent deliveries are made and previous advance and progress payments are recouped.

7.11 COLLECTION TRANSACTIONS

Collections occasioned by recoupments of advance/progress payments, refunds, correction of payment errors involving the appropriation, etc., require notification to the designated Service/Agency accounting points.

A recoupment or the collection of the overpayment of an advance or progress payment, whether deducted from the disbursement voucher or processed as a separate voucher, will be depicted in an LM loop as a collection.

A deduction LM loop may be received as part of a collection transaction when reversing a previous disbursement. When collections cannot be identified to the line item, e.g., voluntary refunds or lack of capability, they will be included in a non-CLIN L loop.

7.12 END OF MONTH NOTICE

When DFAS prepares the last transmission of CPN reports for the accounting month, the transaction set will include an Amount data segment in Table 1 with code MP to indicate that this is the end of month report.

For those accounting stations that are not receiving CPN reports on the last transmission, but have received CPN reports during the accounting month, the DFAS will prepare and transmit a "dummy" end of month report with their last day's traffic. This "dummy" report will include the last Batch Serial Number that was transmitted to that particular CPN recipient. Because there is no voucher in the "dummy" end of month report, table 2 will be omitted.

7.13 RECIPIENTS OF PAYMENT NOTICES

Transmission of payment data by the DFAS to activities other than those shown below is not sanctioned. It is the responsibility of the designated accounting point to supply such data to those activities having a valid requirement.

DFAS will send CPNs to the following addresses based on the department identity codes in the appropriation that was expended:

Appropriation

<u>Department Identity</u>	<u>Transmit To</u>
Code 21, and any code 97 bearing limitation/subhead 0100 or 1301	Accounting station shown in contract or abstract.
Code 17, and any code 97 bearing limitation/subhead 0400 or 0500 or 1304	The activity responsible for keeping the accounting record as indicated in the contract
Any code 97 bearing limitation/subhead in the 5100 series (DLA)	Accounting station shown in contract or abstract.

7.14 PREPARATION OF THE TRANSACTION

Use TS 568 IC - Contract Payment Management Report as shown at appendix 7A.

- Any number of payments, going to the same addressee, may be included in the same transaction set. The transaction set contains three tables.
 - Table 1 identifies:
 - in data segment BGN, that it is a contract payment management report and the unique batch serial number (except for the dummy end of month report which uses the last report number). Batch serial numbers are assigned consecutively beginning with number 1 on the 1st of October each year for each different accounting point to which CPNs are sent.
 - in data segment N1, the code FR (from the paying office), the code TO (to the accountable activity), and code KV for the disbursing officer;
 - data segment AMT is required and will always use qualifier code MP with zero dollars.
 - Table 2 is not included in dummy end of month report transactions.
 - Table 2 consists of one or more large CS loops.
 - Multiple payments are included by multiple iterations of the CS loop.
 - Included in the beginning of the CS loop is the contract number, the voucher number, and voucher date.
 - Nested within the CS loop is a REF loop for each ACRN with the long line accounting data that applies to that ACRN and payment.
 - Also nested within the CS loop is an LX loop which gives pertinent details about the CLIN and the amount applicable to it. Each LX loop begins with a counter for unique identification and may include CLIN, ACRN, ship-to, shipment number, item gross amount, and applicable LQ codes, dollar amount, and quantity.
 - The coded details of the collection or disbursement are carried in LM loops within the LX loop.
 - An N1 loop is nested within the LX loop to identify the ship-to for the line item.
 - Table 3 is the usual transaction set trailer.

APPENDIX 7A

**TRANSACTION SET 568 IMPLEMENTATION CONVENTION
CONTRACT PAYMENT MANAGEMENT REPORT**

568 Contract Payment Management Report

This Draft Standard for Trial Use contains the format and establishes the data contents of the Contract Payment Management Report Transaction Set (568) for use within an Electronic Data Interchange (EDI) environment. This transaction set can be used to enable the transmission of a management report to provide the details of payments and collections made against funds obligated on contracts, orders, and other services.

Implementation Notes

1. Payment offices use this transaction set to report contract payment and collection CPNs to accounting stations.
2. Use a single occurrence of this transaction set to transmit CPNs to a single accounting station. Use one occurrence of this transaction set to transmit a single or multiple CPNs.

27	020	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

- 1/020** The BGN segment identifies the transaction set purpose code, a unique number used to identify this transmission, and the date and time of transaction set creation.
- 1/030** The AMT segment identifies the collected amount and the disbursed amount to the extent that either amount applies to the transaction set.
- 1/040** The N1 loop identifies the name and address information for the transmitting and receiving parties.
- 1/080** The PER segment identifies the name and communications number of an information point of contact familiar with the details of the contract payment management report.
- 2/010** The CS segment identifies the contract, modification, call, and order number of the procurement instrument, and the voucher number of the payment being reported on in this contract payment management report.
- 2/020** The N9 segment identifies the number of the original voucher on which a payment was made if the voucher being reported on in this transmission is a change, correction, or adjustment to that previous voucher.
- 2/030** The DTM segment identifies the date of the voucher being reported on in this transmission.
- 2/040** The LM loop provides the capability to transmit industry-specific codes from an industry-specific code list.
- 2/050** The LQ segment identifies the industry-specific codes.
- 2/060** The REF segment identifies a reference number associated with the following appropriation data.
- 2/070** The AT segment identifies the appropriation codes.
- 2/090** The N9 segment identifies a contract line item, exhibit line item, or subclassification of either against which specific data is being reported.

- 2/100** The AMT segment identifies the gross, net, deducted, or collected amounts and the net variance amount applicable to the line item being reported.
- 2/110** The QTY segment identifies the quantity shipped.
- 2/130** The LQ segment identifies industry-specific codes applicable to the line item.
- 2/140** The N1 loop identifies address information for a quantity delivered in a specific shipment, to a specific ship-to address.
- 2/180** The N9 segment identifies the shipment identification number and suffix number, if one exists, for the shipment which resulted in the voucher action.
- 3/010** The CTT segment identifies the number of CS segments used in the transaction. When used, CTT02 is the hash total of AMT02 at position 090 in Table 2 of this transaction set.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set. 568 X12.219 Contract Payment Management Report	M	ID	3/3
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: BGN Beginning Segment**Level:** Header**Loop:** _____**Mandatory****Usage:** Mandatory**Max Use:** 1**Purpose:** To indicate the beginning of a transaction set.**Syntax:** C0504 — If BGN05 is present, then BGN04 is required.**Semantic:** 1. BGN02 is the transaction set reference number.

2. BGN03 is the transaction set date.

3. BGN04 is the transaction set time.

4. BGN05 is the transaction set time qualifier.

5. BGN06 is the transaction set reference number of a previously sent transaction affected by the current transaction.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Mandatory	BGN02	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier. <i>Implementation Note:</i> <i>When transaction set is used to convey a dummy end of month report use to identify the batch serial number.</i> <i>For other contract payment notices cite ZZ.</i>	M AN 1/30
Mandatory	BGN03	373	Date Date (YYMMDD).	M DT 6/6
Required	BGN04	337	Time Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99) <i>Implementation Notes:</i> 1. Express the originating activity's time of transaction set preparation in GMT. 2. Express time in a four-position (HHMM) format.	C TM 4/8
Not Used	BGN05	623	Time Code	O ID 2/2
Not Used	BGN06	127	Reference Number	O AN 1/30

Required	BGN07 640 Transaction Type Code Code specifying the type of transaction.	O ID 2/2
----------	---	----------------

Implementation Note:

Use when the transaction set contains one or more CPNs.

U9 Contract Payment Notice

Not Used	BGN08 306 Action Code	O ID 1/2
----------	-----------------------------	----------------

Segment: AMT Monetary Amount
Level: Header
Loop: ____
Usage: Mandatory
Max Use: 2
Purpose: To indicate the total monetary amount.

Implementation Note:
 Use to identify either the sum of collections and payments in dollars and cents, or a dummy end of month report.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	AMT01	522	Amount Qualifier Code Code to qualify amount KL Collected Amount KM Disbursed Amount MP Monthly Payment Amount Code Value Implementation Note: Use to identify a dummy end of month report. When used, insert the number 0 in AMT02.	M	ID	1/2
Mandatory	AMT02	782	Monetary Amount Monetary amount.	M	R	1/15
			Implementation Note: Value must be expressed in U.S. currency, i.e., dollars and cents with a decimal included.			
Not Used	AMT03	478	Credit/Debit Flag Code	O	ID	1/1

Required

Segment: N1 Name

Level: Header

Loop: N1 Repeat: 10

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

- Syntax:** 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Note:

The 1/N1/040 loop will cite as a minimum, the organizations originating and receiving the transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
N101	98	Entity Identifier Code	M ID 2/2
		Code identifying an organizational entity, a physical location, or an individual	

Implementation Note:

Use to identify the payment office originating the CPN, the accounting station to receive the CPN, and the disbursing officer.

CW Accounting Station

Code Value Implementation Note:

Use to identify the accounting station receiving the CPN.

KV Disbursing Officer

Code Value Implementation Note:

Use to identify the disbursing officer for a dummy end of month report. For other CPNs use the 2/N1/140.

PR Payer

Code Value Implementation Note:

Use to identify the payment office originating the CPN.

Not Used

N102 93 Name C AN 1/35

Required

N103 66 Identification Code Qualifier C ID 1/2
Code designating the system/method of code structure used for identification Code (67).

10 Department of Defense Activity Address Code (DODAAC)

M3 Disbursing Station

Code Value Implementation Note:

Use to identify the DSSN of the disbursing officer.

Required	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/040 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: CS Contract Summary

Level: Detail

Loop: CS **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

Semantic: 1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.

2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.

3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.

4. CS14 is the Unit of Measure stipulated in the contract.

5. CS15 is the contract line item number (CLIN) unit price specified in the contract.

6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.

7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.

Comments: 1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).

2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Use 2/CS/010 loops, as needed, to report one or more CPNs having the same payment office and accounting station.

2. Use to identify the PIIN, voucher number and, if applicable, the SPIIN.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
CS01	367	Contract Number Contract number.	O AN 1/30

Implementation Note:

Use to identify the PIIN contract number of the contract or order.

Not Used

CS02	327	Change Order Sequence Number	O AN 1/8
------	-----	------------------------------	----------

Optional	CS03	328	Release Number Number identifying a release against a Purchase Order previously placed by the parties involved in the transaction.	O	AN	1/30
			Implementation Note: Use to identify a four-position SPIIN call/order number.			
Required	CS04	128	Reference Number Qualifier Code qualifying the Reference Number.	C	ID	2/2
			VV Voucher Code Value Implementation Note: Use to identify the voucher serial number assigned to the payment/collection.			
Required	CS05	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	CS06	324	Purchase Order Number	O	AN	1/22
Not Used	CS07	560	Special Services Code	O	ID	2/10

Optional

Segment: **LX** Assigned Number

Level: Detail

Loop: LX Repeat: >1

Usage: Optional

Max Use: 1

Purpose: To reference a line number in a transaction set.

Implementation Note:

Use as a counter to identify the number of 2/LX/080 loop iterations in the transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LX01	554	Assigned Number	M	N0	1/6
Number assigned for differentiation within a transaction set.					

Implementation Note:

In the first 2/LX/080 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.

Mandatory

Segment: N9 Reference Number
Level: Detail
Loop: LX
Usage: Mandatory
Max Use: 1
Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier
Syntax: 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.
Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:

Use to identify either the CLIN or ELIN.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N901	128	Reference Number Qualifier Code qualifying the Reference Number. 83 Extended (or Exhibit) Line Item Number (ELIN) Code Value Implementation Note: Use to identify an ELIN. C7 Contract Line Item Number Code Value Implementation Note: Use to identify the CLIN. KL Contract Reference Code Value Implementation Note: Use when no CLIN or ELIN applies (e.g., when the contract obligation variance carried in either the 2/LM/040 or the 2/LM/120 loop, is one of codes A-E or T). When N901 cites code KL, use Z in N902. DLMS does not use this data element, but it is mandatory in the X12 Standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it. X6 Original Voucher Number Code Value Implementation Note: Use to identify the original voucher number of a previous transaction being corrected in a reversed and corrected CPN.	M	ID	2/2
Required	N902	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369	Free-form Description	C	AN	1/45
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8

8

CONTRACT COMPLETION STATUS REPORTING

8.1

GENERAL

This chapter prescribes standard procedures for reporting:

- (a) the status of unclosed contracts subsequent to physical completion,
- (b) major events leading to the closing of the contract files by the CAO,
- (c) the extension of the contract closeout period by the CAO, and
- (d) the extension of contract closeout period by the PO.

These reports are identified as TS 567 IC - Contract Completion Status, (shown at appendix 8A) and, primarily, provide information to the PO for closing and retiring its contract files.

These procedures complement those in FAR, section 4.804-1 and DFARS, section 204.804-1, 4, and 5 and provide computer processable formats in lieu of hard copy documents.

The CAO issued TS 567 IC - Contract Completion Status can include one or more contract completion statements and/or unclosed contract statuses, or cancellations. The PO issued TS 567 can include one or more contract closeout extensions.

8.2

BASIS FOR CONTRACT CLOSING

The basis for closing contract files depends upon the face value of the contract and the extent of administration accorded to it.

The CAO uses the conditions set forth in the Contract Closeout Group codes to group the contracts for follow-on closing actions.

8.3

STANDARD TIMES FOR CONTRACT CLOSING

The FAR, section 4.804-1 prescribes the time standards for closing contracts. These standards are based on the date that the contract is physically completed and on the pricing provisions. When the CAO closes the contract within the time standards it reports the closure under the procedures in section 8.5, below. When the CAO does not close the contract within the time standards it reports the status under the procedures in section 8.6, below, until it closes the contract and finally reports it under section 8.5, below.

8.4

CONTRACT PAYMENT

When an office other than the office with primary contract administration responsibility performs the payment function on a contract, the disbursing office will notify the primary CAO when final payment has been made and the disbursing office file closed. The CAO will forward the status within 5 workdays after expiration of the standard closing period.

8.5 CONTRACT COMPLETION STATEMENT

The contract completion statement is the DFARS authorized electronic version of the DD Form 1594, Contract Completion Statement. It is the means by which the CAO informs the PO (or designated ADP point) of the major events of physical completion, final payment, and/or that the CAO contract file is closed. For all contracts, a final contract completion statement is the basis for the PO to closeout its contract file.

Small purchase contracts are Contract Closeout Group code A and usually do not require payment reporting for contract completion or file closeout. For these contracts the final contract completion statement will normally include only the physical completion date.

A contract is physically completed when,

- for supplies and services contracts:
 - the contractor has completed the required deliveries of supplies and the Government has inspected and accepted such supplies, and
 - the contractor has performed all services and the Government has accepted such services, or
 - a notice of complete contract termination has been given to the contractor by the Government;
- for facilities contracts and rental, use, and storage agreements, a notice of complete termination has been issued or the contract period has expired.

When a large purchase contract, i.e., Contract Closeout Group code B, C, or D, is physically completed (i.e., delivered complete and the material or service accepted), the CAO with the primary contract administration responsibility will forward an interim contract completion statement to the PO to report physical completion.

For a large purchase contract, Contract Closeout Group code B, C, or D, when final payment is made and other actions completed, the CAO with primary contract administration responsibility will forward a final contract completion statement to the PO based upon physical completion, final payment, and completion of all administrative actions.

The unliquidated amount is money that was obligated on the contract but not spent. In all cases, the final contract completion statement must include any unliquidated amount that remains on the contract or order after final payment has been made. The unliquidated amount is the remainder of the accumulated amounts paid, as netted by all collections, subtracted from the amount obligated on the contract by any contract modifications, and adjusted by deductions and all variance codes. The unliquidated amount will be carried in the AMT data segment of the CS loop and will only appear when an unliquidated amount remains on the contract. The accountable activity must reclaim this money before the PO closes the contract.

When the CAO has received a contract completion extension report from the PO, and if the CAO had to perform an additional contract administration function, the CAO will issue a final contract closeout statement report within 5 workdays after the extended closeout date. If the CAO did not have to perform additional contract administration functions after the extension transaction was issued, the contract file will be closed and the last issued final contract completion statement will apply.

8.6 UNCLOSED CONTRACT STATUS

The CAO will furnish an unclosed contract status report to the PO (or designated ADP point) for each contract that will not be closed within the timeframe established in FAR, section 4.804-1.

- The status report will include the reasons for delay and the target date which has been set for closing.
- If the contract is not closed by the target date, a revised unclosed contract status report will be forwarded with the new target date and reasons for further delay.
- A CAO with primary contract administration responsibility will forward the unclosed contract status report to the PO. The FAR, section 4.804 requires the CAO to forward the status report within 15 workdays after the expiration of the standard closing period.

8.7 CONTRACT CLOSEOUT EXTENSION

The PO will use the contract completed date in the contract completion statement as the closeout date for file purposes. When completion of any pending significant PO action extends beyond this closeout date, the PO will send a contract closeout extension notice to the CAO (or designated ADP point) advising of the extended closeout date.

The PO must forward the extension to the CAO within 5 workdays after receipt of the completion statement.

The CAO will then hold the contract open until the extended closeout date.

The PO must ensure that when the extended closeout date is to be revised, another extension notice, with a new extended closeout date, is sent to the CAO.

The CAO will close the contract file after the extended closeout date is passed. If the CAO performed an additional contract administrative function, it will issue another contract completion statement report; otherwise, the previous statement report will remain in effect.

8.8 CANCELLATIONS

Conditions may arise that necessitate the cancellation of a Contract Completion Status transaction. Cancellation is accomplished by transmitting the PIIN, SPIIN (when applicable), CAO, and PO of the original transaction and a Transaction Status Indicator code K.

8.9 FAST PAY CONTRACTS

Normally, a PO receives both a shipment notice transaction and a contract completion statement transaction on each contract. On fast pay contracts which do not exceed \$25,000, however, shipment information is not required by the Army, Navy, or DLA. The Army will use the contract completion statement, both to show performance and to close the contract. The Air Force still requires and receives the shipment information and a contract completion statement on fast pay contracts.

8.10 PREPARATION OF THE TRANSACTION

Use TS 567 IC - Contract Completion Status as shown at appendix 8A.

- Any number of contract completion status reports and/or cancellations, going to the same addressee, can be included in the same transaction set.
- This transaction set contains only one table. Multiple records are included by multiple iterations of the CS loop.
- As discussed in paragraphs 8.5, 8.6, and 8.7, there are five uses of the Contract Completion Status transaction set. Each use is identified by a code in data field CS05.
 - Those issued by the CAO:
 - the unclosed contract status (code D);
 - the final contract completion statement for a small purchase (code A);
 - the interim contract completion statement for a large purchase (code B); and
 - the final contract completion statement for a large purchase (code C).
 - The one issued by the PO is the contract closeout extension (code E).
- There are two N1 data segments for names and places.
 - The 1/N1/030 segment precedes the CS loop, and with two iterations, carries the code FR (from) and the code TO (to); these will be the appropriate PO and CAO which will be common to all records in a given transaction set.
 - The 1/N1/120 segment in the CS loop will identify a paying office or a contractor when one applies to the record.
- Each applicable Transaction Status Indicator code is carried in an iteration of the LQ data segment. Only codes F, J, and K may be used in this transaction set.
- A cancellation report is identified by the Transaction Status Indicator code K in an LQ data segment. A cancellation report must be sent at least 1 day before its replacement report. A cancellation report requires the To, the From, the PIIN, the SPIIN if applicable, the code for the type transaction, and the cancellation code.

APPENDIX 8A

TRANSACTION SET 567 IMPLEMENTATION CONVENTION CONTRACT COMPLETION STATUS

567 Contract Completion Status

This Draft Standard for Trial Use contains the format and establishes the data contents of the Contract Completion Status Transaction Set (567) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to report administrative closure status on completed contracts. The originator can use this transaction set to close contract files, to indicate why contract files will not be closed within established milestones, or to extend contract closeout milestone dates.

This transaction set may be used to convey contract summary data, financial information, dates pertinent to the administrative closing of a contract file, and logistics information necessary to evaluate contract closeout status.

Implementation Notes

1. CAOs use this transaction set to report to POs, both closed and unclosed contract file status. POs use this transaction set to request CAOs delay contract file closing. Contract file closings are dependent upon contract face values and the attendant administrative costs associated with such contract file closings.

2. Use a single occurrence of this transaction set to transmit final CAO contract completion statements for small purchases (usually without payment data), interim CAO contract completion statements for large purchases (with or without payment data), final CAO contract completion statements for large purchases (must include payment data), CAO extension of contract closing to the PO, or PO requests to the CAO for contract closing extension for specified periods of time. Use one occurrence of this transaction set to transmit single or multiple reports for one or more of the five basic transaction types, to include cancellations thereof.

3. Use only the ST, BC, 1/N1/030, CS, LM, LQ, and SE segments when cancelling a previously transmitted contract completion status report.

Table 1

PAGE #	POS. #	SEG. ID	NAME	REQ. DES.	MAX USE	LOOP REPEAT

17	160	SE	Transaction Set Trailer	M	1	

NOTES/COMMENTS:

- 1/020** The BC segment can carry a transaction reference number and a reference to a previous transaction number.
- 1/050** The CS loop carries the details of the contract(s) being reported and the logistics management information relative to the administrative closeout of the contract(s).
- 1/060** The AMT segment carries the amount of obligated dollars which remain unliquidated, if any existed, at the time the contract was administratively closed.
- 1/070** The N9 segment contains the number of the last payment voucher applicable to the reported contract.
- 1/100** The LM loop identifies logistic data unique to each use of the CS loop.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: ____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Required

Segment: N1 Name**Level:** Header**Loop:** _____**Usage:** Optional**Max Use:** 2**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use in every transaction set to cite the organization originating the transaction set.

2. Use in every transaction set to identify the organization to receive the transaction set.

3. Two occurrences are required in every contract completion status transaction set.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Use when CS05 cites any of codes A, B, C, or D, to identify the CAO originating the transaction set. When CS05 cites code E, use to identify the CAO to receive the transaction set.					
QB Purchase Service Provider					
Code Value Implementation Note:					
Use when CS05 is any of codes A, B, C, or D, to identify the PO to receive the transaction set. When CS05 cites code E, use to identify the PO originating the transaction set.					
Not Used	N102	93 Name	C	AN	1/35
Required	N103	66 Identification Code Qualifier	C	ID	1/2
Code designating the system/method of code structure used for Identification Code (67).					
10 Department of Defense Activity Address Code (DODAAC)					
Required	N104	67 Identification Code	C	AN	2/20
Code identifying a party or other code.					
Not Used	N105	706 Entity Relationship Code	O	ID	2/2
Optional	N106	98 Entity Identifier Code	O	ID	2/2
Code identifying an organizational entity, a physical location, or an individual					

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/030 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Mandatory

Segment: CS Contract Summary

Level: Header

Loop: CS **Repeat:** 100

Usage: Mandatory

Max Use: 1

Purpose: To provide information about a contract

Syntax: P0405 — If either CS04 or CS05 is present, then the other is required.

- Semantic:**
1. CS09 is the permissible overage as a percentage of the total contract line item number (CLIN) quantity.
 2. CS10 is the permissible shortage as a percentage of the total contract line item number (CLIN) quantity.
 3. CS11 is the permissible overage dollar value specified by the contract above which discrepancy action is taken.
 4. CS14 is the Unit of Measure stipulated in the contract.
 5. CS15 is the contract line item number (CLIN) unit price specified in the contract.
 6. CS17 conveys the Critical Application Indicator. A "Y" indicates that a Critical Application Indicator is specified in the contract. A "N" indicates that no Critical Application Indicator is specified in the contract.
 7. CS18 conveys the Special Requirements Indicator. A "Y" indicates that a Special Requirements Indicator (requiring special testing and or evaluation) is specified in the contract. A "N" indicates that no Special Requirements Indicator is specified in the contract.
- Comments:**
1. CS04 may be used to identify the Contract Line Item Number (CLIN) or Extended (or Exhibit) Line Item Number (ELIN).
 2. CS07 and CS13 (DE 560) can be used to indicate two different types of special services required.

Implementation Notes:

1. Use the 1/CS/050 loop to identify the, contract number, i.e., PIIN, and, if applicable, the call or order number, or the call or order number including the respective call or order number modification, i.e., SPIIN, as applicable, of the contract or order for which status is being reported.
2. Use multiple iterations of the 1/CS/050 loop to report multiple contracts or orders.
3. Original and cancellation reports can be transmitted in the same transaction set.

Not Used	CS18	1073	Yes/No Condition or Response Code	O	ID	1/1

Optional

Segment: **AMT** Monetary Amount

Level: Header

Loop: CS

Usage: Optional

Max Use: 1

Purpose: To indicate the total monetary amount.

Implementation Notes:

1. Use in 1/CS/050 loops to indicate the unliquidated funds amount left over after contract completion.
2. Do not use in cancellations, or when CS05 cites either code D or E.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	AMT01	522	Amount Qualifier Code Code to qualify amount UA Unliquidated Amount	M	ID	1/2
Mandatory	AMT02	782	Monetary Amount Monetary amount.	M	R	1/15
Implementation Note: Express as a whole number with an explicit decimal position as needed.						
Not Used	AMT03	478	Credit/Debit Flag Code	O	ID	1/1

Optional

Segment: N9 Reference Number

Level: Header

Loop: CS

Usage: Optional

Max Use: 1

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Notes:

1. Use in 1/CS/050 loops as needed, to identify the final payment voucher number.
2. Do not use in cancellations, or when CS05 cites either code D or E.
3. Must use in 1/CS/050 loops when CS05 cites code C. May be used when CS05 cites either code A or B.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N901	128	Reference Number Qualifier Code qualifying the Reference Number. VV - Voucher	M	ID	2/2
			Code Value Implementation Note: Use to identify the voucher number of the final payment.			
Required	N902	127	Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369	Free-form Description	C	AN	1/45
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Optional

Segment: G62 Date/Time

Level: Header

Loop: CS

Usage: Optional

Max Use: 3

Purpose: To specify pertinent dates and times

Syntax: 1. R0103 — At least one of G6201 or G6203 is required.

2. P0102 — If either G6201 or G6202 is present, then the other is required.

3. P0304 — If either G6203 or G6204 is present, then the other is required.

Implementation Note:

Use in 1/CS/050 loops when reporting all types of contract closeout status except cancellations.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
G6201	432	Date Qualifier Code specifying type of date.	C ID 2/2

Implementation Notes:

1. For interim contract completion statement transactions (i.e., physically completed and accepted), use codes BM and BN, as appropriate. Do not use code BP.

2. For final contract completion statement transactions for large purchases (i.e., contracts closed), use code BM and as appropriate, BN and BP. For small purchases use codes BM and as appropriate BN.

3. For CAO contract closeout extension status transactions, use codes BM, BN, and BO, as appropriate.

4. For PO contract closeout extension transactions, use codes BM and BQ.

BM Contract Physically Completed

Code Value Implementation Note:

Must use in all reports to identify the date of physical completion.

BN Contract Final Payment

Code Value Implementation Note:

Use, as appropriate, in contract completion and CAO contract closeout extension status reports to identify the date of final payment. Must use when reporting final large purchase contract completion statements (CS05 cites code C). When using in this manner, the transaction must contain the 1/LQ/110 segment, including transaction status indicator code F and a contract closeout group code of B, C, or D.

BO Estimated Contract Completion

Code Value Implementation Note:

Must use in unclosed CAO contract closeout extension status transactions to identify the estimated contract completion date. CAO contract closeout extension must cite the contractor in the one iteration of the 1/N1/120 loop. Do not use any transaction status indicator code. Must use when CS05 cites code D.

BP Contract Closed

Code Value Implementation Note:

Must use in large purchase final contract completion statements (CS05 cites code C) to identify the contract closure date. Must use with one iteration of 1/LQ/110 and transaction status indicator code F.

BQ Extended Closeout

Code Value Implementation Note:

Must use in contract closeout extension transactions (CS05 cites code E) to identify an extended closeout date.

Required	G6202	373	Date Date (YYMMDD).	C	DT	6/6
Not Used	G6203	176	Time Qualifier	C	ID	1/2
Not Used	G6204	337	Time	C	TM	4/8
Not Used	G6205	623	Time Code	O	ID	2/2
Not Used	G6206	624	Century	O	NO	2/2

Required

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use the 1/LM/100 loop in 1/CS/050 loops to identify DoD unique coded data related to the characteristics and coding requirements for the contract completion status report.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

Optional

Segment: N1 Name**Level:** Header**Loop:** N1 **Repeat:** 10**Usage:** Optional**Max Use:** 1**Purpose:** To identify a party by type of organization, name and code**Syntax:** 1. R0203 — At least one of N102 or N103 is required.

2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.

2. N105 and N106 further define the type of entity in N101.

Implementation Notes:

1. Use the 1/N1/120 loop in 1/CS/050 loops to identify the disbursing officer in contract completion statement transactions, when final payment has been made and when 1/LQ/110 cites either code F or J. Must use 1/N9/070 to identify the final payment voucher number.
2. Use one iteration of the 1/N1/120 loop to identify the contractor in CAO contract closeout extension status transactions, when 1/LQ/110 includes a reason for delayed closing of contract file code.
3. Must use the 1/N1/120 loop when CS05 cites code C and the 1/LQ/110 segment cites TSI code F.
4. Do not use the 1/N1/120 loop in cancellations.

Data Element Summary

1 INTRODUCTION

1.1 GENERAL

This volume provides DoD standard procedures and EDI conventions for billing and related adjustments for sales of material and related services using American National Standards Institute (ANSI) Accredited Standards Committee (ASC) X12 transactions.

Use of this volume requires simultaneous access to volume 1. Volume 1 contains the full table of contents for the manual; the only listings of acronyms and abbreviations, definitions, and references for the manual; instructions for acquiring access to the DLMS standards database; specific guidance that applies to all implementation conventions; and both functional and technical information that is relatively stable and applies to the DLMS as a whole.

1.2 POLICY

DoD Instruction 7220.9, DoD Instruction 7420.12, DoD 7000.14-R, and DoD 7420.13-R, provide the DoD policies governing procedures in this volume.

1.3 APPLICABILITY

This volume applies to the Office of the Secretary of Defense, Military Departments, Joint Staff, Unified and Specified Commands, Defense Agencies, and Defense Organizations (hereafter referred to collectively as "DoD Components") and, by agreement, to other organizations participating in the Defense Logistics Management Standards System.

1.4 FINANCE PROCESS REVIEW COMMITTEE

The Finance PRC is the forum through which the DoD Components and other participating organizations may participate in the development, expansion, improvement, maintenance, and administration of financial requirements for the DLMS. The Chairman, Finance PRC, in coordination with other Finance PRC members, is responsible for the contents of this volume of the DLMS. Members of the Finance PRC are identified in appendix 1A. Refer to volume 1, chapter 1 for a discussion of DLMS Process Review Committee functions and responsibilities.

1.5 NONCOMPLIANCE

If reasonable attempts to obtain compliance with prescribed procedures or resolution of DLMS Finance related problems are unsatisfactory, the activity having the problem will request assistance from their DLMS Finance PRC representative. The request will include information and copies of all correspondence pertinent to the problem; including the document number, the number and date of the DLMS Bill, and billing office. The representative will take the necessary actions to resolve the issue or problem. The actions may include requesting assistance from the Chairman, Finance PRC.

2 DLMS BILLING

2.1 CRITERIA FOR BILLING

2.1.1 SHIPMENTS FROM STOCK

Shipments from stock may be billed 7 days after the material is dropped from inventory, provided notification of warehouse refusal or other advice of nonavailability is not received. Exceptions are as follows:

Billings for foreign military sales and other security assistance shipments may be billed after constructive delivery.

Billings for bulk POL shipments may be billed after notification of receipt or 15 days after the date of shipment or issue, whichever occurs first.

Billings for perishable subsistence chill and freeze items may be billed after the items have been dropped from inventory. Billings for fresh fruits and vegetables may be billed after an issue transaction is received from a Defense Subsistence Office.

MAP sales requisitioned under authority of Section 506 of the Foreign Assistance Act; that is, when the FMS/MAP type of assistance code is C, may not be billed until funds are appropriated. Although Section 506 does not provide obligation or disbursing authority it does permit the drawdown of existing DoD stocks subject to an appropriation to be made at a later date. Since there is no assurance that defense accounts will be reimbursed, the transfers cannot be recorded as accounts receivable. Therefore, issues under Section 506 will be treated as transfers without reimbursement. The transfer without reimbursement will be reversed when appropriations are received to reimburse the DoD account for the transfer. Section 506 drawdowns of GSA or other non-DoD stocks are not authorized.¹

2.1.2 DIRECT DELIVERIES OF MATERIAL FROM CONTRACTORS

Material shipped directly to customers from DoD vendors may be billed after the customers confirm they have received the material or the vendor confirms it has shipped the material, whichever occurs first.

2.1.3 OTHER

Adjustments and credits will be billed within 30 days of the transaction or letter committing the organization to providing the adjustment.

2.2 PREPARATION OF DLMS BILLS

2.2.1 GENERAL

Billing offices will prepare DLMS bills using the TS 810 IC - DLMS Billing (appendix 2A).

If the DLMS bill is paid under interfund procedures, the billing office will report the collection to

¹ Section 552 of the Security Assistance Act the President may "direct the drawdown of commodities and services from the inventory and resources of any agency of the United States Government...Under DLMS, except for the use of DoD (Section 506) or any agency (Section 552) assets, drawdowns under both sections are identified and treated similarly.

its servicing finance center on its seller interfund report. A separate interfund DLMS bill will be prepared for billings applicable to a bill-to DoDAAC and treasury symbol.

Billing offices will transmit DLMS bills to customers within 14 days of the billing eligibility criteria provided in section 2.1. Separate billing lines will be prepared for each shipment or delivery and for each accessorial charge supporting the DLMS bill. Refer to chapter 4 for additional information on interfund reporting procedures.

2.2.2 METHOD OF BILLING

Ordering activities will generally authorize providers of goods and related services to use the interfund method of reimbursement for orders processed under DLMS procedures. Notwithstanding the general rule, on a case-by-case basis, a DoD activity may exercise its right to request a noninterfund invoice.

A noninterfund method of reimbursement must be used when the bill-to party is either a non-DoD activity or a DoD contractor.

2.2.3 DETERMINING BILL-TO PARTIES

Ordering activities will identify a billed party DoDAAC for all requisitions or other orders, including nonreimbursable orders.

Item managers or other providers of goods and services will reject requisitions or other orders when a valid billed party is not identified. Billing offices will designate the ordering or submitting activity as the bill-to party if, for whatever reason, they are unable to identify a valid billed party. The Service security assistance control office will be designated as the bill-to party for unidentifiable security assistance requisitions. The Service control offices are: Army- W25P02, Navy- N65916, and Air Force- FA2303.

2.2.4 NONREIMBURSABLE INVOICES

Except for GSA billings of less than \$1, material issued under nonreimbursable procedures will be included on invoices as no charge billing lines.

DoD 7220.9-M provides that if the amount of billings for any one customer is less than \$500 at the end of a fiscal year quarter the billing may be waived. However, working capital and Corps of Engineers civil works funds may not waive reimbursement of any amount.

GSA sometimes, at its discretion, processes requisitions of \$1 or less without billing. Therefore, any DoD Component having such items unbilled 60 days after receipt of material may assume that they will not be billed and cancel the obligation accordingly.

2.3 DLMS INTERFUND BILLS

Activities will normally authorize providers of goods and services to use interfund reimbursement procedures. All DLMS interfund bills will be forwarded to DAASC within three days of the date the related seller interfund report is forwarded to the finance center. DAASC will route invoices to all parties identified in the invoice.

2.4 DLMS NONINTERFUND BILLING

When an activity does not authorize the use of interfund reimbursement procedures, DoD providers of goods and services will use no check reimbursement methods for DoD activities. All DLMS noninterfund bills will be forwarded to DAASC for further routing to all parties identified in the DLMS Bill. When an activity is unable to use EDI methods; that is, the DLMS Bill, they may use the SF 1080, Voucher for Transfers between Appropriations and/or Funds, or other form approved by the Treasury Department, such as GSA Form 789, Statement, Voucher and Schedule of Withdrawals and Credits, as the billing document for noninterfund bills.

2.5 RETAIL LOSS ALLOWANCE

DoD 7420.13-R requires the Defense Business Operations Fund to grant a discount for retail losses to retail stock funds based upon net issues after authorized credits or offsets have been applied. These discounts are to provide funds for losses experienced at the retail stock fund level. Retail loss discounts shall not be granted for sales to commissaries and customers of retail or installation level stock fund activities. However, retail loss discounts are authorized for all military clothing items sold to Military Exchanges.

2.6 INTO-PLANE

These procedures apply to DoD into-plane issues (sales) of fuels to DoD aircraft except when other billing procedures are specified by the terms of an inter-ly to DoD into-plane issues (sales) of fuelService support agreement.

Reimbursable issues (sales) of fuel into DoD planes by DoD activities will be billed at the standard price in effect at the time of issue.

Contractor into-plane fuel issues will be billed at the standard price applicable to each such issue.

Billing offices funded by the DBOF will grant credit for DoD aircraft defueling based on supply defueling slips at DBOF prices.

Credits will be given for contractor into-plane defueling of DoD aircraft based on a defueling slip at the standard price given for each defueling.

2.7 AUTOMOTIVE VEHICLES

GSA is authorized to use the interfund billing system to invoice DoD activities for automotive vehicles purchased under a category one (reimbursable) MIPR. DoD activities submitting MIPRs must do so in accordance with paragraph 8.7008 of the DoD Supplement to the Federal Acquisition Regulation which requires activities to provide DLMS requisition data for each line item which is to be delivered to each ship-to address.

2.8 OPTIONAL BILLING PROCEDURE: FRESH FRUITS AND VEGETABLES

DoD Components and participating Agencies may elect to have DLA's Defense Personnel Support Center summarize billings for FF&V. The option is available on a DoD Component or Agency-wide basis only. Currently, only the Air Force has elected this billing option.

Under the optional FF&V billing procedure, DLA will summarize onto a single billing line all FF&V

issues to a Service or Agency. The billings will be summarized by requisition month and fiscal year. These summarized billings will be forwarded to a predesignated central office in that Service or Agency. DLA will provide supporting detail issue data on request.

2.9 BILLING FOR ACCESSORIAL AND ADMINISTRATIVE COSTS

Accessorial and administrative costs may be invoiced using either interfund or noninterfund reimbursement methods. However, in all cases, billing will be accomplished in the same manner as the material. DoD 7220.9-M, provides the DoD policy for billing accessorial and administrative costs

Unless otherwise indicated on ordering documents or transactions, accessorial costs incurred for supply items requisitioned by DoD activities will be charged to the same funds as the material.

2.10 HAZARDOUS MATERIAL AND WASTE BILLINGS

Users of DLA's hazardous material and waste disposal services will provide DLA with a disposal turn-in document (DD Form 1348-1A) as prescribed by DoD 4160.21-M and volume 2. Since these services are provided on a reimbursable basis, the order will be funded in accordance with the standards prescribed by DoD 7220.9-M. The order will generally authorize DLA to use the interfund billing system to reimburse themselves for these services.

2.11 BILLING FOR PROGRESS AND ADVANCE PAYMENTS

2.11.1 PROGRESS BILLINGS

Progress payments may be billed via interfund whenever the order received from the customer specifies that progress billings via interfund are authorized. Documentation of the agreement by the customer to allow progress billing via interfund may be used in lieu of a specific provision on each order.

Billings made for progress payments will be based upon documentary evidence of satisfactory performance and will not exceed the amount of the customer order.

The billing office will offset billing lines for deliveries against all outstanding progress billings related to those deliveries. Billing lines will be reported for both the sales price of the shipment and the amount of the progress billing being liquidated. The billing method elected for the progress payment will also be the method used to invoice for the delivery.

Although multiple progress billings may have been submitted against an order, a single recoupment billing may be reported for the total amount of the progress billings.

2.11.2 ADVANCE BILLINGS

Advance billings may not be billed via interfund. When authorized, advance funding will be satisfied via noninterfund and by the use of appropriation level, rather than project or order level, advances.

Advances received must be returned or applied to accounts receivable before the end of the fiscal year.

2.12 CORRECTION OF ERRONEOUS BILLINGS

Billing Forwarded to Customer. When a billing office finds it has issued an invoice containing one or more erroneous billing lines it will correct the erroneous billing line in a subsequent invoice. Normally, billing offices are expected to reverse and reissue only the erroneous billing line, not the entire invoice. The corrections will be processed as soon as it is practical and will not await customer requests for adjustments.

Billing Not Forwarded to Customer. When DAASC rejects an interfund invoice the billing office will reverse the interfund collection in its next seller interfund report.

2.13 CANCELLATIONS

When a provider accepts a customer's request to cancel a requisition or other order, any billings generated for that requisition will be reversed in the next billing cycle. When the cancellation involves diverting material back to stock, the billing will be reversed upon receipt of the material. Any charges related to the cancellation, such as contract termination costs, will be billed under noninterfund procedures.

2.14 RETENTION OF BILLING RECORDS

Billing offices must have accessibility to security assistance billing records for two years and other bills for 1 year after the billing month. Billing records include not only a copy of the bill but records supporting the bill as well. However, adjustment processing activities will retain accessibility to billing records for whatever time period is required to enable them to process adjustments for requests or validated discrepancy reports when the request or report leading to the adjustment is received within prescribed timeframes.

2.15 DAASC PROCESSING

2.15.1 ROUTING

Billing offices must forward all DLMS billings to DAASC for editing and routing to addresses.

2.15.2 EDITING

DAASC will edit DLMS bills to ensure that they satisfy ANSI ASC X12 syntactical requirements for the TS 810.

2.15.3 DISPOSITION

DAASC will reject DLMS bills failing syntactical analysis and prepare a 997 transaction set to advise billing and billed offices. Billing offices should correct all rejected DLMS bills and resubmit them. However, if the billing was included on the billing office's interfund report, the DLMS bill or interfund report must be corrected.

DAASC will route DLMS bills (DDN, mail, etc.) to the billed office. The DAASC will retain images of non-Security Assistance bills routed by them for 1 year and Security Assistance bills for 2 years. Chapter 3 prescribes procedures for obtaining copies from DAASC.

APPENDIX 2A

TRANSACTION SET 810 IMPLEMENTATION CONVENTION

DLMS BILLING

810 Invoice

This Draft Standard for Trial Use contains the format and establishes the data contents of the Invoice Transaction Set (810) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to provide for customary and established business and industry practice relative to the billing for goods and services provided.

Implementation Notes

1. Finance and accounting offices, invoicing (billing) offices and other offices use this transaction set to forward DoD DLMS invoices for material and related services exchanged between DoD components and other participating Federal Agencies.
2. Use a single occurrence of this transaction set to bill or provide adjustment for one or more items provided to paying (bill-to) offices and other offices under DLMS procedures. The transaction set may include multiple allowances and charges related to those lines of billing or to the invoice as a whole. Use one occurrence of this transaction set to transmit a single or multiple transactions.
3. The total number of IT1 and SAC segments may not exceed 494.

NOTES/COMMENTS:

- 1/212** The BAL segment is to be used only if the code in BIG07 indicates that the transaction is a "Monthly Adjustment" or "Special Handling Adjustment" invoice.
- 2/015** The QTY segment is used to specify a quantity of units which are expected as payments, e.g., trade-ins or returns.
- 3/070** Number of line items (CTT01) is the accumulation of the number of IT1 segments. If used, hash total (CTT02) is the sum of the value of quantities invoiced (IT102) for each IT1 segment.

Segment: **ST** Transaction Set Header

Level: Header

Loop: _____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
			810 X12.2 Invoice			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Mandatory

Segment: BIG Beginning Segment for Invoice**Level:** Header**Loop:** ____**Usage:** Mandatory**Max Use:** 1**Purpose:** To indicate the beginning of an invoice transaction set and to transmit identifying numbers and dates.**Semantic:** 1. BIG01 is the invoice issue date.
2. BIG03 is the date assigned by the purchaser to purchase order.
3. BIG10 indicates the consolidated invoice number. When BIG07 contains code CI, BIG10 is not used.**Comment:** BIG07 is used only to further define the type of invoice when needed.**Data Element Summary**

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

CA Cash**Code Value Implementation Note:***Use to indicate noninterfund bill. These invoices are requests for payment, and require the billed office to pay by check or otherwise take action to reimburse the billing office.***PP** Prepaid Invoice**Code Value Implementation Note:***Use to indicate DoD interfund bills. These invoices are not requests for payment, but notices to the billed office that its funds have been disbursed and the invoice paid.*

Required

BIG08	353	Transaction Set Purpose Code	O	ID	2/2
-------	-----	------------------------------	---	----	-----

Code identifying purpose of transaction set.

00 Original**Code Value Implementation Note:***Use to identify the transaction as an original invoice.*

15 Re-Submission

Code Value Implementation Note:

Use to identify a transaction as a re-submission of an original invoice. If appropriate, the re-submitted invoice may be processed as an original.

77 Simulation Exercise

Code Value Implementation Note:

Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.

Floating	Segment: NTE Note/Special Instruction
	Level: Header
	Loop: _____
	Usage: Floating
	Max Use: 100
	Purpose: To transmit information in a free-form format, if necessary, for comment or special instruction
	Comment: The NTE segment permits free-form information/data which, under ANSI X12 standard implementations, is not machine processable. The use of the "NTE" segment should therefore be avoided, if at all possible, in an automated environment.

Implementation Note:

Use only to identify exception data associated with the transaction set. Use only during extraordinary situations requiring manual intervention in the processing routine.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Optional	NTE01	363	Note Reference Code Code identifying the functional area or purpose for which the note applies.	O ID 3/3
		OTH	Other Instructions	
Mandatory	NTE02	352	Description A free-form description to clarify the related data elements and their content.	M AN 1/80

Optional

Segment: PER Administrative Communications Contact

Level: Header

Loop: _____

Usage: Optional

Max Use: 3

Purpose: To identify a person or office to whom administrative communications should be directed

Syntax: 1. P0304 — If either PER03 or PER04 is present, then the other is required.
2. P0506 — If either PER05 or PER06 is present, then the other is required.
3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use is recommended for noninterfund bills to identify the person in the invoicing activity, the bill-to party or other party to contact for further information on the invoice or one of its billing lines. Use for interfund bills only under exceptional circumstances when requiring direct communication with the party originating the transaction set.
2. Use multiple repetitions to identify a POC and multiple communication numbers. When using multiple repetitions to identify different communication numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named. IC Information Contact	M ID 2/2
Optional	PER02	93	Name Free-form name.	O AN 1/35
Implementation Note: Provide the last name, first name, middle initial, and rate/rank/title, as required, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.				
Conditional	PER03	365	Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
Implementation Notes: 1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of the PER segment to identify more than three numbers. 2. Do not include blank spaces or dashes between numbers. AU Defense Switched Network Code Value Implementation Note: Use to identify the DSN telephone number.				

			EM Electronic Mail			
			FT Federal Telecommunications System (FTS)			
			Code Value Implementation Note: Use to identify the FTS telephone number.			
			FX Facsimile			
			Code Value Implementation Note: Use to identify the facsimile telephone number.

Required

Segment: N1 Name

Level: Header

Loop: N1 Repeat: 200

Usage: Optional

Max Use: 1

Purpose: To identify a party by type of organization, name and code

Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.

Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.

Implementation Note:
The 1/N1/070 loop will, as a minimum, identify the issuer of the invoice (DoDAAC and RIC) and the bill-to party (RIC).

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	N101	98	Entity Identifier Code	M	ID 2/2
	Code identifying an organizational entity, a physical location, or an individual				
	BT Bill-to-Party				
	Code Value Implementation Note: Use to identify the billed office.				
	II Issuer of Invoice				
	Code Value Implementation Note: Use to identify the billing office.				
	PK Party to Receive Copy				
	Code Value Implementation Note: Use to identify the recipient of information or duplicate copies.				
	RI Remit To				
	Code Value Implementation Note: Use to identify the party or address to receive remittance when the party or address is not the same as the issuer of the invoice.				
Conditional	N102	93	Name	C	AN 1/35
Free-form name.					
Implementation Note: Use only to indicate the clear text name of the remit-to address and only when the remit-to address has not been assigned a DoDAAC. When using, do not use N103 and N104.					
Conditional	N103	66	Identification Code Qualifier	C	ID 1/2
Code designating the system/method of code structure used for Identification Code (67).					
10 Department of Defense Activity Address Code (DODAAC)					

M4 Department of Defense Routing Identifier Code (RIC)

Conditional	N104	67	Identification Code Code identifying a party or other code.	C	AN	2/20
Not Used	N105	706	Entity Relationship Code	O	ID	2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O	ID	2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/070 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional	Segment: N2 Additional Name Information
	Level: Header
	Loop: N1
	Usage: Optional
	Max Use: 2
	Purpose: To specify additional names or those longer than 35 characters in length
Implementation Note: Use only when using 1/N102/070.	

Data Element Summary

Required	Segment: AT Financial Accounting		
	Level: Header		
	Loop: _____		
	Usage: Optional		
	Max Use: >1		
Required	Purpose: To transmit financial accounting data		
	Syntax: C1001 — If AT10 is present, then AT01 is required.		
	Comment: AT09 identifies unique local activity financial accounting information		
	Implementation Note: Use multiple repetitions, as needed, to identify the appropriation reimbursed and disbursed.		
	Data Element Summary		
Required	REF. DES.	DATA ELEMENT	NAME
	AT01	1271	Industry Code
			Code indicating a code from a specific industry code list
	Implementation Note: Use to identify the DLMS Fund Purpose Code. Use code CR or DR. Both CR and DR are required when BIG07 is PP, otherwise, only DR is required.		
	ATTRIBUTES		
Optional	AT02	1282	Treasury Symbol Number
			Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure
	Implementation Note: Cite the basic appropriation (departmental index, fiscal year, treasury symbol) and limit/subhead. Required when BIG07 is PP.		
	AT03	1283	Budget Activity Number
			Number identifying an administrative subdivision of funds against which a transaction is to be charged for a standard accounting classification coding structure
Optional	AT04	1284	Object Class Number
			Number identifying the nature of the goods or services acquired and a specific office or organization using resources for a standard accounting classification coding structure
	AT05	1285	Reimbursable Source Number
			Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure
	Implementation Note: Use to identify the DLMS Fund Code. Only required when AT01 is DR.		
Optional	AT06	1286	Transaction Reference Number
			Number identifying an original request for goods and services to the matching financial transaction for a standard accounting classification coding structure

Optional	AT07	1287	Accountable Station Number Number identifying an office responsible for entering a financial transaction into the applicable accounting system for a standard accounting classification coding structure	O AN	3/8
Optional	AT08	1288	Paying Station Number Number identifying an office responsible for making a payment or collection and the corresponding voucher number under which the action was taken for a standard accounting classification coding structure	O AN	8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O AN	1/80
Implementation Note: <i>Use for the supplemental accounting classification.</i>					
Not Used	AT10	1270	Code List Qualifier Code	O ID	1/3

Optional

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/220 loop to identify DoD unique coded data when any specific LQ01 qualifier code (e.g., 61) applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/300 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. The code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10.) Do not cite any qualifier code in 1/LQ/220 that does not apply to all the table 2 iterations. (Codes subject to override: 0, 61, DE, and DG.)

Data Element Summary

Required	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Implementation Note:
Only DI codes FS1, FS2, GS1, or GS2 may be cited. If BIG07 is CA may be GS1 or GS2. If BIG07 is PP may be FS1 or FS2.

Optional

Segment: IT1 Baseline Item Data (Invoice)

Level: Detail

Loop: IT1 **Repeat:** 200000

Usage: Optional

Max Use: 1

Purpose: To specify the basic and most frequently used line item data for the invoice and related transactions.

- Syntax:**
1. P020304 — If either IT102, IT103 or IT104 are present, then the others are required.
 2. P0607 — If either IT106 or IT107 is present, then the other is required.
 3. P0809 — If either IT108 or IT109 is present, then the other is required.
 4. P1011 — If either IT110 or IT111 is present, then the other is required.
 5. P1213 — If either IT112 or IT113 is present, then the other is required.
 6. P1415 — If either IT114 or IT115 is present, then the other is required.
 7. P1617 — If either IT116 or IT117 is present, then the other is required.
 8. P1819 — If either IT118 or IT119 is present, then the other is required.
 9. P2021 — If either IT120 or IT121 is present, then the other is required.
 10. P2223 — If either IT122 or IT123 is present, then the other is required.
 11. P2425 — If either IT124 or IT125 is present, then the other is required.

Semantic: IT101 is the purchase order line item identification.

- Comments:**
1. Element 235/234 combinations should be interpreted to include products and/or services. See the Data Dictionary for a complete list of ID's.
 2. IT106 through IT125 provides for ten (10) different product/service ID's for each item. For example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use multiple iterations of the 2/IT1/010 loop to provide billing data for a specific item or line of billing. Allowances or charges identifiable to a specific item or line of billing will be included in that line's 2/SAC/180 loop. Invoice level allowances or charges; that is, allowances or charges not identifiable to a specific item or line of billing, will be included in the 3/SAC/040 loop.
2. Each line of billing (i.e., each 2/IT1/010 loop) must cite a unique transaction number for reference purposes. Use the requisition document number or purchase order number associated with the line of billing as the unique transaction number.

Data Element Summary

Required

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
IT101	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O AN 1/11

Required	Implementation Note: Use as a counter to identify the invoice billing line number of 2/IT1/010 loop iterations. In the first 2/IT1/010 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.				
	IT102	358	Quantity Invoiced Number of units invoiced (supplier units).	C R	1/10
Required	Implementation Note: Express as a whole number with no decimals. For example, if the quantity invoiced is 20, cite only 20. For no charge material, indicate 0 (zero) quantity.				
	IT103	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	C ID	2/2
Required	Implementation Notes: 1. Use to identify the unit of issue. (See the unit of issue conversion table in volume 1, chapter 10.) 2. Use UL when a unit of issue is not appropriate.				
	IT104	212	Unit Price Price per unit of product, service, commodity, etc.	C R	1/17
Required	Implementation Note: Use the billing unit price, including those cases wherein the item was issued either without charge or on a nonreimbursable basis. Use a decimal point to indicate amounts that are not in whole dollars. Use a "0" when the item is issued without charge.				
	IT105	639	Basis of Unit Price Code Code identifying the type of unit price for an item.	O ID	2/2
Required	Implementation Note: Identify the source of unit price data in IT104. CA Catalog CT Contract NC No Charge Code Value Implementation Note: Use to indicate nonreimbursable material. NT Net ST Standard				
	IT106	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C ID	2/2
	Implementation Notes: 1. Use only one of codes A1, A2, A4, FB, FS, FT, MG, or YP to identify materiel associated with the quantity invoiced. 2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE. 3. When citing the Federal Supply Classification (code FT), always use code CN to identify the commodity name or description. A1 Plant Equipment Number Code Value Implementation Note: Use to identify the plant equipment. A2 Department of Defense Identification Code (DoDIC)				

Code Value Implementation Note:

Use to identify ammunition items.

A4 Subsistence Identification Number

Code Value Implementation Note:

Use to identify subsistence items.

CN Commodity Name

Code Value Implementation Note:

Use only with code FT to identify the material name or description.

FB Form Number

Code Value Implementation Note:

Use to identify the form stock number.

FS National Stock Number

Code Value Implementation Note:

Must use NSN when known.

FT Federal Supply Classification

Code Value Implementation Note:

Use to identify nonstandard material when a part number is not available and material can only be identified by description.

JP Package Type Code

Code Value Implementation Note:

Must use when material must meet OCONUS packaging and preservation requirements. When used, the paired date elements 234 will cite 1 indicating that packaging must meet OCONUS specifications. When not used, CONUS level specifications are adequate.

MG Manufacturer's Part Number

Code Value Implementation Note:

Use to identify nonstandard material.

YP Publication Number

Code Value Implementation Note:

Use to identify the publication stock number.

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use only with code MG to identify a manufacturer's part number.

Required	IT107	234	Product/Service ID Identifying number for a product or service.	C	AN	1/40
----------	-------	-----	---	---	----	------

Conditional	IT108	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2
-------------	-------	-----	---	---	----	-----

CN Commodity Name

Code Value Implementation Note:

Use only with code FT to identify the material name or description.

FT Federal Supply Classification

Code Value Implementation Note:

Use to identify nonstandard material when a part number is not available and material can only be identified by description.

MG Manufacturer's Part Number

Code Value Implementation Note:

Use to identify nonstandard material.

ZB Commercial and Government Entity (CAGE) Code

Code Value Implementation Note:

Use only with code MG to identify a manufacturer's part number.

Optional	Segment: CAD Carrier Detail				
	Level: Detail				
	Loop: IT1				
	Usage: Optional				
	Max Use: >1				
	Purpose: To specify transportation details for the transaction				
	Syntax: 1. R0504 — At least one of CAD05 or CAD04 is required.				
	2. C0708 — If CAD07 is present, then CAD08 is required.				
	Implementation Note: Must use for Security Assistance Transactions.				
	Data Element Summary				
Required	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES	
	CAD01	91	Transportation Method/Type Code Code specifying the method or type of transportation for the shipment.	O ID	1/2
Not Used	Implementation Note: Use to identify the mode of shipment.				
	CAD02	206	Equipment Initial	O AN	1/4
Not Used	CAD03	207	Equipment Number	O AN	1/10
Not Used	CAD04	140	Standard Carrier Alpha Code	C ID	2/4
Required	CAD05	387	Routing Free-form description of the routing or requested routing for shipment, or the originating carrier's identity.	C AN	1/35
Not Used	Implementation Note: Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.				
	CAD06	368	Shipment/Order Status Code	O ID	2/2
Required	CAD07	128	Reference Number Qualifier Code qualifying the Reference Number.	O ID	2/2
	Implementation Note: Use only one of codes 08, 97, AW, BL, BM, IZ, K1, K2, K3, SI, or WY to identify the shipment unit number.				
	08 Carrier Assigned Package Identification Number				
	Code Value Implementation Note: Use as needed to identify the shipment unit small package identification number when no other number available.				
	97 Package Number				
	Code Value Implementation Note: Use as needed to identify the shipment unit package identification number.				
	AW Air Waybill Number				
	Code Value Implementation Note: Use as needed to identify the shipment unit air waybill number.				
	BL Government Bill of Lading				

Code Value Implementation Note:

Use as needed to identify the government bill of lading (e.g., not through a CONUS regional freight consolidation center) to a CONUS destination.

BM Bill of Lading Number

Code Value Implementation Note:

Use as needed to identify the shipment unit commercial bill of lading number.

IZ Insured Parcel Post Number

Code Value Implementation Note:

Use as needed to identify the shipment unit insured parcel post number.

K1 Foreign Military Sales Notice Number

Code Value Implementation Note:

Use for FMS shipments made on a commercial bill of lading or commercial collect bill of lading, as needed, to identify the shipment unit FMS notice number.

K2 Certified Mail Number

Code Value Implementation Note:

Use as needed to identify the shipment unit certified mail number.

K3 Registered Mail Number

Code Value Implementation Note:

Use as needed to identify the shipment unit registered parcel post number.

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Use as needed to identify the shipment unit express mail number.

Required	CAD08	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Not Used	CAD09	284	Service Level Code	O	ID	2/2

Optional

Segment: **SAC** Service, Promotion, Allowance, or Charge
Information

Level: Detail

Loop: SAC **Repeat:** 25

Usage: Optional

Max Use: 1

Purpose: To request or identify a service, promotion, allowance, or charge; to specify the amount or percentage for the service, promotion, allowance, or charge

- Syntax:**
1. R0203 — At least one of SAC02 or SAC03 is required.
 2. P0304 — If either SAC03 or SAC04 is present, then the other is required.
 3. P0607 — If either SAC06 or SAC07 is present, then the other is required.
 4. P0910 — If either SAC09 or SAC10 is present, then the other is required.
 5. C1110 — If SAC11 is present, then SAC10 is required.
 6. L130204 — If SAC13 is present, then at least one of SAC02 or SAC04 are required.
 7. C1413 — If SAC14 is present, then SAC13 is required.

- Semantic:**
1. If SAC01 is A or C, then at least one of SAC05, SAC07, or SAC08 is required.
 2. SAC05 is the total amount for the service, promotion, allowance, or charge.
 3. If SAC05 is present with SAC07 or SAC08, then SAC05 takes precedence.
 4. SAC08 is the allowance or charge rate per unit.
 5. SAC10 and SAC11 is the quantity basis when the allowance or charge quantity is different from the purchase order or invoice quantity.
 6. SAC10 and SAC11 used together indicate a quantity range, which could be a dollar amount, that is applicable to service, promotion, allowance, or charge.
 7. SAC13 is used in conjunction with SAC02 or SAC04 to provide a specific reference number as identified by the code used.
 8. SAC14 is used in conjunction with SAC13 to identify an option when there is more than one option of the promotion.

Comments: 1. SAC04 may be used to uniquely identify the service, promotion, allowance, or charge. In addition, it may be used in conjunction to further the code in SAC02.

2. In some business applications, it is necessary to advise the trading partner of the actual dollar amount that a particular allowance, charge, or promotion was based on to reduce ambiguity. This amount is commonly referred to a "Dollar Basis Amount". It is represented in the SAC segment in SAC10 using the qualifier DO - Dollars in SAC09.

Implementation Note:

Use only for credit and allowance amounts identifiable to a specific line of billing.

Data Element Summary

Implementation Note: Used to identify the net amount of all credits, charges, and allowances excluding terms (payment) discounts.				
Not Used	TDS02	610	Amount	O N2 1/15
Optional	TDS03	610	Amount Monetary amount.	O N2 1/15
Implementation Note: Use to identify the final net amount of the invoice. It is the arithmetic sum of TDS01 less any authorized terms (payment) discounts.				
Optional	TDS04	610	Amount Monetary amount.	O N2 1/15
Implementation Note: Use to identify the amount of terms (payment) discounts taken.				

Optional

Segment: SAC Service, Promotion, Allowance, or Charge Information

Level: Summary

Loop: SAC **Repeat:** 25

Usage: Optional

Max Use: 1

Purpose: To request or identify a service, promotion, allowance, or charge; to specify the amount or percentage for the service, promotion, allowance, or charge

- Syntax:**
1. R0203 — At least one of SAC02 or SAC03 is required.
 2. P0304 — If either SAC03 or SAC04 is present, then the other is required.
 3. P0607 — If either SAC06 or SAC07 is present, then the other is required.
 4. P0910 — If either SAC09 or SAC10 is present, then the other is required.
 5. C1110 — If SAC11 is present, then SAC10 is required.
 6. L130204 — If SAC13 is present, then at least one of SAC02 or SAC04 are required.
 7. C1413 — If SAC14 is present, then SAC13 is required.

- Semantic:**
1. If SAC01 is A or C, then at least one of SAC05, SAC07, or SAC08 is required.
 2. SAC05 is the total amount for the service, promotion, allowance, or charge.
 3. If SAC05 is present with SAC07 or SAC08, then SAC05 takes precedence.
 4. SAC08 is the allowance or charge rate per unit.
 5. SAC10 and SAC11 is the quantity basis when the allowance or charge quantity is different from the purchase order or invoice quantity.
 6. SAC10 and SAC11 used together indicate a quantity range, which could be a dollar amount, that is applicable to service, promotion, allowance, or charge.
 7. SAC13 is used in conjunction with SAC02 or SAC04 to provide a specific reference number as identified by the code used.
 8. SAC14 is used in conjunction with SAC13 to identify an option when there is more than one option of the promotion.

Comments: 1. SAC04 may be used to uniquely identify the service, promotion, allowance, or charge. In addition, it may be used in conjunction to further the code in SAC02.

2. In some business applications, it is necessary to advise the trading partner of the actual dollar amount that a particular allowance, charge, or promotion was based on to reduce ambiguity. This amount is commonly referred to a "Dollar Basis Amount". It is represented in the SAC segment in SAC10 using the qualifier DO - Dollars in SAC09.

Implementation Note:

Use for allowances or credits which cannot be identified to any specific line of billing within the entire invoice.

Data Element Summary

3 PROCESSING AND PAYMENT OF DLMS BILLS

3.1 PAYMENT OF NONINTERFUND BILLS

Bills are due upon receipt and shall be paid in full and promptly; that is, within 30 calendar days of the bill date. The following exceptions apply:

- Bills for issues to NATO (SHAPE) (identified by billed office DoDAAC WM1Q7K) are due 120 calendar days after the billed date.
- Bills for issues to UN Peacekeeping Forces are due 120 calendar days after the billed date.

When both the appropriations to be reimbursed and disbursed are within the DoD, bills may be paid by cross disbursing (no check) procedures. Payments involving non-DoD appropriations or to non-DoD activities will be by check. All payments for noninterfund bills will include either the identification (bill or statement number) of the bill, or a copy of the bill.

3.2 PROCESSING INTERFUND BILLS

Interfund bills are notices of disbursement of billed office funds by the billing office. Accordingly, billed offices will take prompt action to suspend, correct, or accept the disbursement. These actions will be accomplished as prescribed in the appropriate Service or Agency interfund reporting and clearance procedure.

3.3 ADJUSTMENTS

Billed offices will review all charges to ensure that items billed were ordered and that obligations are adjusted when appropriate. All credits will be reviewed to ensure that they are warranted and correct. Billed offices will request adjustments for erroneous charges or credits in accordance with chapter 4.

4 DLMS BILLING ADJUSTMENTS

4.1 REQUESTING ADJUSTMENTS

Offices desiring adjustment of DLMS billings will request adjustment of these bills using the DLMS adjustment request implementation convention (appendix 4A) for the TS 812 - IC - Credit/Debit Adjustment. The implementation convention will also be used to cancel or followup on adjustment requests.

4.1.1 SUBMISSION

All requests for adjustments will be forwarded to the billing office except as noted in this section.

Requests for copies of interfund bills will be forwarded to the DAASC if the DAASC record retention period has not expired. See chapter 2 for DAASC record retention requirements.

Requests for adjustments of GSA billings will be forwarded to the GSA Customer Service Center (DoDAAC "470000").

4.1.2 TIMEFRAMES

All requests for adjustments should be submitted within 30 calendar days of receipt of the billing. Initial requests for adjustment received after the record retention period for billing records may be denied. When a discrepancy report or adjustment request is received within prescribed timeframes, nonavailability of records or the passing of the record by the time the report is validated or the request is processed may not be used as a basis for denying the adjustment.

4.1.3 MINIMUM VALUE

In general, no request for adjustment will be submitted for billing errors when the amount of the error is \$250 or less. As an exception to the general rule, no request for adjustment will be submitted for billing errors when the amount of the error is \$100 or less and the billing office is GSA or the materiel involved is a subsistence item.

There is no minimum value for (a) requesting status on an anticipated or required billing, (b) requesting a corrected bill when the bill received is incomplete, (c) requesting a copy of a bill, (d) requesting a change in the type of billing (interfund to noninterfund and noninterfund to interfund), or (e) requesting adjustments for validated discrepancy reports.

There is no minimum value for adjustment of FMS billing errors. However, adjustment requests for FMS shipments may not be submitted when the request can be rejected per the general conditions of the U.S. Department of Defense Offer and Acceptance.

4.2 CANCELLING OR AMENDING REQUESTS FOR ADJUSTMENT

Submitting offices may cancel requests for adjustments whenever the request is no longer valid or appropriate and the billing office has not provided a final reply to the request.

Requests for adjustments may be amended by cancelling the original request and submitting a new request.

4.3 FOLLOWUP ON UNANSWERED REQUESTS FOR ADJUSTMENT

Except for followups to DAASC, offices submitting adjustment requests will follow up on requests for adjustments remaining unanswered for more than 45 calendar days after submission. If the request for adjustment remains unanswered for more than 30 calendar days after followup, submitting offices will forward a second and final followup by letter or message to the billing office. In addition to providing the billing office with the information required to process the request, the final followup will also identify the dates of initial and followup request.

Followup to DAASC for copies of bills, if needed, will be by letter or message. Followup to DAASC may begin 7 calendar days after the request is submitted.

Offices designated to receive MRP credit will initially followup on the credit due when the credit has not been received and more than 60 calendar days have elapsed since the creditable status was received. A second followup will be submitted if a reply or credit is not received within 60 calendar days of the initial followup.

4.4 REPLYING TO REQUESTS FOR ADJUSTMENT OR MRP CREDIT

Billing or adjustment processing offices will reply to adjustment requests using the DLMS adjustment request reply implementation convention (appendix 4B) for the TS 812 IC - Credit/Debit Adjustment. The implementation convention will also be used to reply to followup requests.

Billing offices will respond to all requests for adjustment within 30 calendar days of the date the request is received. Billing offices will respond to followup requests for adjustment within 21 calendar days of the date the request is submitted. All adjustment replies will include an appropriate coded reply.

All responses to adjustment requests will be forwarded to the office submitting the request and parties identified to receive status. Adjustments will be forwarded to the office originally billed.

4.5 ADJUSTMENT AMOUNT

In general, adjustments, when warranted, will be at the price originally billed. Adjustments for validated PQDRs will be processed at the current standard price when the original price billed cannot be determined. Adjustments for MRP credits will be at the current acquisition price or at a reduced price if, in the opinion of the IMM, the condition warrants such reduction.

4.6 UNSATISFACTORY BILL PROCEDURES

An unsatisfactory DLMS bill is a bill which cannot be processed. For example, the total amount is not fully supported by billing details or the bill does not include essential information required by DLMS billing implementation conventions. Bill-to parties will use the TS 997 IC - Functional Acknowledgement to reject improper bills back to the billing office. See volume 1, chapter 6, for the implementation convention for the Functional Acknowledgement transaction set.

4.7 BILLING STATUS PROCEDURES

When requisitioned material is received, intended billed offices must use TS 812- IC - Adjustment Request to seek the status of the bill. When material was not ordered, or if ordered, not received, discrepancy report procedures apply. See volume 2 and DLAR 4500.15, et. al., for discrepancy report procedures.

When shipment status is received for requisitioned material and the material can be billed only upon evidence of constructive delivery, intended billed offices must use TS 812 IC - Adjustment Request (appendix 4A) to seek the status of the bill. Billing offices may generate the required billing when properly completed requests are received and a billing is awaiting evidence of constructive delivery. Billing offices will also initiate appropriate actions with their supply office to identify and resolve problems underlying this condition.

At least 90 calendar days must have elapsed after receiving the material or, in the case of FMS shipments, shipment status before requesting the status of the bill. However, the status must be requested within a year of the date of shipment (2 years for FMS shipments). Billing offices may reject requests for billing status which are not submitted within these timeframes.

Except for billings awaiting evidence of shipment or receipt, billing offices will not generate bills based solely upon a request for billing status.

4.8 BILL COPY PROCEDURES

Like other adjustment requests, requests for copies of DLMS bills will be forwarded to the DAASC using TS 812 IC - Adjustment Requests.

DAASC will retransmit a copy of all bills wherein the billing office DoDAAC, bill number, and year within decade and month of credit match the same information on the request.

Billing offices failing to respond to requests for copies of bills, when such requests are received within the record retention period, will be directed by their Service or Agency headquarters to reverse the billing. Billed offices will absorb all charges, in the manner prescribed by their Service or Agency, when the record retention period has elapsed and they have failed to obtain copies of bills.

4.9 REQUEST FOR CHANGE IN BILLING METHOD

When a billed office is unable to process a DLMS bill (either interfund or noninterfund) under the payment method processed, they may have the item or items billed under the alternative procedure by forwarding TS 812 IC - Adjustment Request to the billing office. All such requests, submitted according to the procedures prescribed in this manual, will be honored by the billing office.

4.10 ADJUSTMENTS FOR DISCREPANCY REPORTS

Discrepancy reports will be submitted, reviewed, processed, validated, and responded to in accordance with volume 2 and DLAR 4500.15, et. al. Financial adjustments related to discrepancy reports will be processed in accordance with this manual

4.10.1 FINANCIAL ADJUSTMENT

Billing offices will process financial adjustments without regard to dollar value when the discrepancy report is validated and the following criteria are met:

- The discrepancy was not resolved otherwise; i.e., the vendor does not replace deficient material for a validated PQDR.

- The material was billed and paid previously or, in the case of PQDRs, there is reasonable basis for assuming the items were billed and paid for previously.
- The material is received by the depot in those cases where the discrepancy report reply requires the return.

When a reply to a discrepancy report improperly commits the billing office to providing an adjustment; e.g., shipment was never billed, the billing office will ask the replying office to correct the reply to the discrepancy report.

4.10.2 OTHER DISCREPANCIES ADJUSTMENT RULES

Requests for adjustments related to TDRs will be submitted only when the adjustment is not received and more than 60 calendar days have elapsed since the report was filed. Requests related to PQDRs and SDRs will not be submitted until a minimum of 60 calendar days have elapsed since receiving notification that the discrepancy is validated; that is, that an adjustment is approved.

When the promised adjustment for a discrepancy is contingent upon the return of material, the request will not be submitted until a minimum of 60 calendar days have elapsed since shipping the material. When a reply to a discrepancy report is not received, follow up as prescribed by volume 2.

4.11 ADJUSTMENTS FOR BILLING ERRORS

The following are billing errors and will not be accepted for processing unless the minimum value criterion (section 4.1) for requesting adjustment is met:

- Duplicates
- Wrong amount billed
- Wrong office billed
- Improper billed
- Promised adjustment not received
- Other problems

4.11.1 DUPLICATES

4.11.1.1 DUPLICATE BILLING LINE

A duplicate billing line is a second or subsequent billing for a single shipment or adjustment. If the second or subsequent billing resulted from a second or subsequent shipment, financial adjustment procedures do not apply. See, instead, discrepancy report procedures for duplicate shipments in volume 2.

4.11.1.2 DUPLICATE BILL

A duplicate bill is a bill which is supported entirely by duplicate billing lines. In the case of interfund bills, the bill is also included on the billing office's interfund report.

4.11.2 WRONG AMOUNT BILLED

A wrong amount billed refers to a billing line in which the unit price, quantity, or price extension is erroneous.

Do not request adjustment for wrong amount if:

- The unit price is the correct standard or catalog price and you are questioning the price. Follow price challenge procedures instead.
- The quantity billed equals the quantity ordered or shipped and a lesser quantity is received. Follow the appropriate volume 2 discrepancy reporting procedure instead.

4.11.3 WRONG OFFICE BILLED

Request an adjustment for wrong office billed when the office billed does not agree with the coded requirements of the requisition or adjustment request and the coding indicated a valid billed office DoDAAC. A valid billed office DoDAAC is one listed in the DoDAAD.

If the coded information used to derive the billing office does not provide for a valid DoDAAC and the billing office assigned the billed office as prescribed in chapter 2, the adjustment may be denied.

When the billing office assigned the billed office as prescribed in chapter 2 and the office assigned is not the intended office, the billed office will transfer or otherwise process the bill in accordance with procedures prescribed by the Service or Agency. If the offices involved are serviced by the same finance center, the billed office will contact the intended billed office or requisitioner and make arrangements for transferring the bill.

4.11.4 IMPROPER BILLING

A TS 812 IC - Adjustment Request citing the proper billing advice code should be submitted to billing offices to request adjustments for improper billings. For purposes of this section, an improper billing is a billing line which:

- Charges for material requisitioned under nonreimbursable procedures;
- Charges improperly for accessorial costs;
- Charges for material following a reply that a billing could not be rendered; or
- Charges for material confirmed cancelled when the material is not received.

When the "cancelled" material is received or if the requisition was not confirmed cancelled by the ICP or IMM, financial procedures do not apply. Follow instead volume 2 procedures prescribed for reporting SDRs. Although annotations on a shipping document, in conjunction with other factors, may support a discrepancy report, they do not support an adjustment for improper billing. A validated discrepancy report is needed.

4.11.5 PROMISED ADJUSTMENT NOT RECEIVED

Billed offices will forward a TS 812 IC - Adjustment Request with the proper billing advice code to the billing office to followup on promised adjustments which are not received and more than 30 days have elapsed since receiving a reply promising the billing or adjustment.

4.11.6 OTHER BILLING PROBLEMS

Billed offices or others will request adjustments for problems not covered by billing advice codes by forwarding a letter (or message) of explanation along with the information required to process the request. The billing office will normally respond with a TS 812 IC - Adjustment Request (appendix 4B).

4.12 ADJUSTMENTS FOR CHANGE NOTICES

If an order is placed with or through the DBOF, an undelivered order (obligation) should be recorded when the order is placed. A non-stock numbered item should be recorded as an undelivered order when the order is accepted. An adjustment to the undelivered order should be processed when a change notice affecting price, quantity, or an acceptable substitution of a like item is received from the stock fund. Refer to the DoD 7220.9-M for more specific information on the above requirements.

If a DBOF customer does not receive a change notice or does not receive it in time to cancel or modify the order and additional funds are required, the material may be refused or returned to the DBOF and an adjustment requested. Adjustments for this reason will be forwarded by mail and must be signed by the activity accounting officer. The request must meet the following requirements and will state essentially:

"As a result of a price change, quantity change, or authorized substitution, the value of the material received exceeds amounts obligated and all available obligation authority. Request credit for the indicated quantity and items delivered under the following requisition document and suffix number. In addition, provide us with the return instructions for the material."

The billing office will honor all such requests and provide adjustment, without regard to dollar value, after the material is returned. The billing office will also contact the item manager (requisition processing office) to arrange for the return.

4.13 ADJUSTMENTS FOR FMS DISCREPANCIES AND BILLING ERRORS

The Military Departments may automatically grant adjustments¹ and charge or credit the administrative surcharge fund when:

- The request cannot be rejected per the agreement with the FMS customer and

¹ Automatic adjustments may be withheld from specific customers if there is a pattern of abuse of this authority. When such a pattern exists, all discrepancies and billing errors from that customer should be researched.

- The amount of the adjustment requested is either (1) less than \$100 or (2) less than the amount approved² for that Military Department by the DSAA.

4.14 CREDITS FOR EXCESS REPORTS (Material RETURNS PROGRAM)

Material returns program procedures are prescribed by volume 2.

Billing offices will process credits for excess reports during the first billing cycle after receiving notification that material, authorized for return under creditable procedures, has been received in a condition warranting credit.

² Military Departments may request approval for a different adjustment level. The dollar amounts of automatic adjustments will be determined by an agency cost effectiveness study which compares the administrative cost of conducting necessary research to determine specific responsibility versus the cost which will be incurred by the administrative surcharge pool if an automatic refund is authorized. The agency cost effectiveness study must be submitted to DSAA for review and approval.

APPENDIX 4A

TRANSACTION SET 812 IMPLEMENTATION CONVENTION

ADJUSTMENT REQUEST

812 Credit/Debit Adjustment

This Draft Standard for Trial Use contains the format and establishes the data contents of the Credit/Debit Adjustment Transaction Set (812) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to notify a trading partner of an adjustment or billback and may be used to request an adjustment or billback. It identifies and contains the details and amounts covering exceptions, adjustments, credits, or debits for goods or services. This transaction set is multidirectional between trading partners.

Implementation Notes

1. Organizations use this transaction set to request, cancel or followup on a request for adjustments to specific interfund and noninterfund invoices or request a duplicate copy of the invoice. In the reply to this request for interfund adjustments, the billing office will notify the requester of its decision with a TS 812 adjustment reply but the actual adjustments will appear as a credit in a TS 810 Invoice. For noninterfund adjustments, the billing office's reply will also be with a TS 812 Adjustment Reply. The reply will inform the billed office of the approved adjusted payment to sent to the billing office.
2. Use a single occurrence of this transaction set to transmit one or more requests for adjustment of detailed billing records from a single invoice.
3. Use only Table 1 for a duplicate invoice copy request.

Table 1

1/090 SHD is used to indicate shipment detail relative to credit or debit of returned product.

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Mandatory

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
		812	X12.40 Credit/Debit Adjustment			
Mandatory	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9

Segment: **BCD** Beginning Credit/Debit Adjustment

Level: Header

Loop: ____

Mandatory **Usage:** Mandatory

Max Use: 1

Purpose: To transmit identifying dates and numbers for this transaction set and to indicate the monetary value to the receiver of the transaction

Syntax: 1. R071014 — At least one of BCD07, BCD10 or BCD14 is required.
2. P1314 — If either BCD13 or BCD14 is present, then the other is required.

Semantic: 1. BCD01 is the credit/debit adjustment date.
2. BCD04 is the net amount of this complete transaction.
3. BCD06 is the invoice date.
4. BCD09 is the purchase order date.

Comments: 1. If using BCD07 or BCD10, do not use BCD14 to identify invoice number or purchase order number.
2. For BCD11, only codes 00, 05, 06, 07, and 15 are permitted to be used.

Data Element Summary

Segment: PER Administrative Communications Contact

Level: Header

Loop: _____

Optional

Usage: Optional

Max Use: >1

Purpose: To identify a person or office to whom administrative communications should be directed

- Syntax:**
1. P0304 — If either PER03 or PER04 is present, then the other is required.
 2. P0506 — If either PER05 or PER06 is present, then the other is required.
 3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use only under exceptional circumstances when requiring direct communication with the party originating the transaction set.
2. Use multiple repetitions to identify a POC and multiple communication numbers. When using multiple repetitions to identify different communication numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code	M ID 2/2

Code identifying the major duty or responsibility of the person or group named.

IC Information Contact

Code Value Implementation Note:

Must use in the first repetition to identify the primary point of contact and their primary communication number.

Optional

PER02	93	Name	O AN 1/35
-------	----	------	-----------

Free-form name.

Implementation Note:

Provide the last name, first name, middle initial, and rate/rank/title, as required, of the individual named as POC. Include blank spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier	C ID 2/2
-------	-----	--------------------------------	----------

Code identifying the type of communication number.

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communications numbers. Use additional repetitions of the PER segment to identify more than three numbers.
2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Conditional	PER08	364	Communication Number	X	AN	1/80
			Complete communications number including country or area code when applicable.			

Not Used	PER09	443	Contact Inquiry Reference	O	AN	1/20
----------	-------	-----	---------------------------	---	----	------

Segment: **AT Financial Accounting**
Level: Header
Loop: _____
Usage: Optional
Max Use: >1
Purpose: To transmit financial accounting data
Syntax: **C1001** — If AT10 is present, then AT01 is required.
Comment: AT09 identifies unique local activity financial accounting information

Implementation Notes:

1. Use multiple repetitions as needed to identify the appropriation to cite for goods, services, and related adjustments.
2. Do not use in cancellations or followups on a request for adjustment.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Required	AT01	1271	Industry Code Code indicating a code from a specific industry code list	C AN 1/20
	Implementation Note: Use to identify DLMS Fund Purpose Code. Use any code except CR or DR.			
Optional	AT02	1282	Treasury Symbol Number Number identifying a department, fiscal year, treasury account number, and appropriation limit for a standard accounting classification coding structure	O AN 7/21
	Implementation Note: Cite the basic appropriation (departmental index, fiscal year, treasury account number) and limit/subhead.			
Optional	AT03	1283	Budget Activity Number Number identifying an administrative subdivision of funds against which a transaction is to be charged for a standard accounting classification coding structure	O AN 1/16
Optional	AT04	1284	Object Class Number Number identifying the nature of the goods or services acquired and a specific office or organization using resources for a standard accounting classification coding structure	O AN 3/12
Required	AT05	1285	Reimbursable Source Number Number identifying the source of an appropriation or fund reimbursement for a standard accounting classification coding structure	O AN 1/3
	Implementation Note: Use to identify the DLMS Fund Code.			
Optional	AT06	1286	Transaction Reference Number Number identifying an original request for goods and services to the matching financial transaction for a standard accounting classification coding structure	O AN 4/20

Optional	AT07	1287	Accountable Station Number Number identifying an office responsible for entering a financial transaction into the applicable accounting system for a standard accounting classification coding structure	O AN	3/8
Optional	AT08	1288	Paying Station Number Number identifying an office responsible for making a payment or collection and the corresponding voucher number under which the action was taken for a standard accounting classification coding structure	O AN	8/14
Optional	AT09	352	Description A free-form description to clarify the related data elements and their content.	O AN	1/80
Implementation Note: <i>Use for the supplemental accounting classification data.</i>					
Not Used	AT10	1270	Code List Qualifier Code	O ID	1/3

Required

Segment: N1 Name
Level: Header
Loop: N1 **Repeat:** 200
Usage: Mandatory
Max Use: 1
Purpose: To identify a party by type of organization, name and code
Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.
Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.

Implementation Note:
Use to identify, at a minimum, the organization originating the transaction set and the organization to receive the transaction set.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	M ID 2/2
			BT Bill-to-Party Code Value Implementation Note: Use to identify the billed office. II Issuer of Invoice Code Value Implementation Note: Use to identify the billing office. Z1 Party to Receive Status Code Value Implementation Note: Use to indicate the party to receive status when different from the Service/Agency prescribed status recipient. Use multiple iterations of the 1/N1/100 loop to identify all status recipients, as required.	
Not Used	N102	93	Name	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C ID 1/2
Conditional	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2
Optional	N106	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual	O ID 2/2

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/100 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: LM Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/155 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/205 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. The code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10.) Do not cite any qualifier code in 1/LQ/155 that does not apply to all the table 2 iterations. (Codes subject to override: 0, DE, and DG.)

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2

Not Used

LM02	822	Source Subqualifier	O	AN	1/15
------	-----	----------------------------	---	----	------

Segment: LQ Industry Code
Level: Header
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code DE Signal Code DG Fund Code	O	ID	1/3
Conditional	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Optional

Segment: **CDD** Credit/Debit Adjustment Detail

Level: Detail

Loop: CDD Repeat: >1

Usage: Optional

Max Use: 1

Purpose: To provide information relative to a line item adjustment

Syntax:

1. R0407 — At least one of CDD04 or CDD07 is required.
2. C0711 — If CDD07 is present, then CDD11 is required.
3. P0708 — If either CDD07 or CDD08 is present, then the other is required.
4. P1011 — If either CDD10 or CDD11 is present, then the other is required.
5. P1213 — If either CDD12 or CDD13 is present, then the other is required.

Semantic: CDD05 is the code indicating whether adjustment is for returned goods. A "Y" confirms that the shipment is for returned goods.

Comment: If comparison pricing is used, then CDD12 and CDD13 are required.

Implementation Note:

Use each repetition of the 2/CDD/160 loop only to request an adjustment to a detailed billing record from a specified invoice. Each repetition of the CDD loop is a separate request for adjustment. Do not use for invoice duplicate copy requests.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	CDD01	426	Adjustment Reason Code Code indicating reason for credit memo, or adjustment to invoice, credit memo, or payment.	M ID 2/2
			Implementation Note: Use a ZZ for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The ZZ entry satisfies the X12 usage requirements; the receiving application software shall not process it.	
Mandatory	CDD02	478	Credit/Debit Flag Code Code indicating whether amount is a credit or debit C Credit D Debit	M ID 1/1
Optional	CDD03	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O AN 1/11
			Implementation Note: Use as a counter to identify the number of 2/CDD/160 loop iterations. In the first 2/CDD/160 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.	
Conditional	CDD04	610	Amount Monetary amount.	C N2 1/15

	Implementation Note: <i>Use to identify the adjustment amount sought for each 2/CDD/160 loop. The amount will be in dollars and cents.</i>				
Not Used	CDD05	1073	Yes/No Condition or Response Code	O ID	1/1
Not Used	CDD06	417	Price Bracket Identifier	O AN	1/3
Conditional	CDD07	477	Credit/Debit Quantity Number of supplier units credited or debited.	C R	1/10
	Implementation Notes: 1. Use to indicate the quantity related to the adjustment request. 2. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.				
Conditional	CDD08	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	C ID	2/2
	Implementation Note: <i>Use to indicate adjustment quantities unit of measure.</i>				
Optional	CDD09	427	Unit Price Difference Per unit (case) price or allowance/charge difference between original billing and corrected amount (may be unit full list price or allowance/charge where item was not on original billing or where full credit/debit amount is being transacted; i.e. - returns or contested quantities).	O R	1/9
	Implementation Note: <i>Use to identify the over or under charge amount in the unit price in dollars and cents with a decimal included.</i>				
Conditional	CDD10	236	Price Identifier Code Code identifying pricing specification. INV Invoice Billing Price	C ID	3/3
	Code Value Implementation Note: <i>Use to identify the source of the billing price.</i>				
Conditional	CDD11	212	Unit Price Price per unit of product, service, commodity, etc.	C R	1/17
	Implementation Note: <i>Use to indicate the billed unit price. A decimal point must be used if the unit price is other than whole dollars.</i>				
Not Used	CDD12	236	Price Identifier Code	C ID	3/3
Not Used	CDD13	212	Unit Price	C R	1/17

Optional

Segment: LIN Item Identification

Level: Detail

Loop: CDD

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use to identify the item shipped. This data perpetuates from the requisition unless using a substitute item.
2. Use the data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Not Used	LIN01	350	Assigned Identification	O	AN	1/11
Mandatory	LIN02	235	Product/Service ID Qualifier	M	ID	2/2

Code identifying the type/source of the descriptive number used in Product/Service ID (234).

Implementation Notes:

1. Use only one of codes A1, A2, A4, FB, FS, FT, MG, or YP to properly identify the material requisitioned.
2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE.
3. When citing the Federal Supply Classification (code FT), always use code CN to identify the commodity name or description.

A1 Plant Equipment Number**Code Value Implementation Note:**

Use to identify plant equipment.

A2 Department of Defense Identification Code (DoDIC)**Code Value Implementation Note:**

Use to identify ammunition items.

A4 Subsistence Identification Number**Code Value Implementation Note:**

Use to identify subsistence items.

CN Commodity Name**Code Value Implementation Note:**

Use to identify the nomenclature of the nonstandard material.

FB Form Number**Code Value Implementation Note:**

Use to identify the form stock number.

FS National Stock Number**Code Value Implementation Note:**

Must use NSN when known.

FT Federal Supply Classification**Code Value Implementation Note:**

Use to identify nonstandard material when a part number is not available and material can only be ordered by description.

JP Package Type Code**Code Value Implementation Note:**

Must use when material must meet CONUS packaging and preservation requirements. When used, the paired data element 234 will cite 1 indicating that packaging must meet CONUS specifications. When not used, CONUS level specifications are adequate.

MG Manufacturer's Part Number**Code Value Implementation Note:**

Use to identify nonstandard material.

YP Publication Number**Code Value Implementation Note:**

Use to identify the publication stock number

ZB Commercial and Government Entity (CAGE) Code**Code Value Implementation Note:**

Use only with code MG to identify a manufacturer's part number.

Required

Segment: N9 Reference Number

Level: Detail

Loop: CDD

Usage: Optional

Max Use: >1

Purpose: To transmit identifying numbers and descriptive information as specified by the reference number qualifier

Syntax: 1. R0203 — At least one of N902 or N903 is required.

2. C0605 — If N906 is present, then N905 is required.

Semantic: N906 reflects the time zone which the time reflects.

Implementation Note:

Use to identify the transaction number and related reference number for the detailed billing record to be adjusted.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N901	128	Reference Number Qualifier Code qualifying the Reference Number.	M	ID	2/2

Implementation Note:

Use only one of codes 08, 97, AW, BL, BM, IZ, K1, K2, K3, SI, or WY to identify the shipment unit number.

08 Carrier Assigned Package Identification Number

Code Value Implementation Note:

Use as needed to identify the shipment unit small package identification number when no other number is available.

97 Package Number

Code Value Implementation Note:

Use as needed to identify the shipment unit package identification number.

AW Air Waybill Number

Code Value Implementation Note:

Use as needed to identify the shipment unit air waybill number.

BL Government Bill of Lading

Code Value Implementation Note:

Use as needed to identify the government bill of lading (e.g., not through a CONUS regional freight consolidation center) to a CONUS destination.

BM Bill of Lading Number

Code Value Implementation Note:

Use to identify the shipment unit commercial bill of lading number.

IZ Insured Parcel Post Number

Code Value Implementation Note:

Use as needed to identify the shipment unit insured parcel post number.

K1 Foreign Military Sales Notice Number

Code Value Implementation Note:

Use for FMS shipments made on a commercial bill of lading or commercial collect bill of lading, as needed, to identify the shipment unit FMS notice number.

K2 Certified Mail Number

Code Value Implementation Note:

Use as needed to identify the shipment unit certified mail number.

K3 Registered Mail Number

Code Value Implementation Note:

Use as needed to identify the shipment unit registered parcel post number.

OI Original Invoice Number

Code Value Implementation Note:

Use to identify the first invoice where this billing was recorded.

SI Shipper's Identifying Number for Shipment (SID)

Code Value Implementation Note:

Use as needed to identify the shipment unit express mail number.

TG Transportation Control Number (TCN)

Code Value Implementation Note:

Use to identify the TCN.

TN Transaction Reference Number

Code Value Implementation Note:

Use to identify the transaction number associated with the billing adjustment request.

W8 Suffix

Code Value Implementation Note:

Use to identify the suffix of a transaction number for a quantity less than the original quantity.

Conditional	N902	127	Reference Number	C	AN	1/30
			Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.			
Conditional	N903	369	Free-form Description	C	AN	1/45
			Free-form descriptive text.			
Not Used	N904	373	Date	O	DT	6/6
Not Used	N905	337	Time	C	TM	4/8
Not Used	N906	623	Time Code	O	ID	2/2

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: CDD

Usage: Optional

Max Use: 5

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.

2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES

APPENDIX 4B

TRANSACTION SET 812 IMPLEMENTATION CONVENTION

ADJUSTMENT REQUEST REPLY

812 Credit/Debit Adjustment

This Draft Standard for Trial Use contains the format and establishes the data contents of the Credit/Debit Adjustment Transaction Set (812) for use within the context of an Electronic Data Interchange (EDI) environment. The transaction set can be used to notify a trading partner of an adjustment or billback and may be used to request an adjustment or billback. It identifies and contains the details and amounts covering exceptions, adjustments, credits, or debits for goods or services. This transaction set is multidirectional between trading partners.

Implementation Notes

1. Organizations use this transaction set to reply to specific interfund or noninterfund invoice adjustment (TS812) requests or followups. Billing office replies for interfund adjustments are informational with the official approved adjustments appearing in a TS 810 Invoice.
2. Use a single occurrence of this transaction set to transmit adjustments to one or more organizations. Use one occurrence of this transaction set to transmit a single or multiple transactions.

NOTES/COMMENTS:

1/020 BCD05 indicates whether the net of the detail is a credit or a debit.

1/090 SHD is used to indicate shipment detail relative to credit or debit of returned product.

Mandatory

Segment: ST Transaction Set Header

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

Semantic: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the invoice transaction set).

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set.	M	ID	3/3
	812	X12.40 Credit/Debit Adjustment			

Mandatory

ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M	AN	4/9
------	-----	---	---	----	-----

Segment: **BCD** Beginning Credit/Debit Adjustment

Level: Header

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To transmit identifying dates and numbers for this transaction set and to indicate the monetary value to the receiver of the transaction

Syntax: 1. R071014 — At least one of BCD07, BCD10 or BCD14 is required.
2. P1314 — If either BCD13 or BCD14 is present, then the other is required.

Semantic: 1. BCD01 is the credit/debit adjustment date.
2. BCD04 is the net amount of this complete transaction.
3. BCD06 is the invoice date.
4. BCD09 is the purchase order date.

Comments: 1. If using BCD07 or BCD10, do not use BCD14 to identify invoice number or purchase order number.
2. For BCD11, only codes 00, 05, 06, 07, and 15 are permitted to be used.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	BCD01 373	Date Date (YYMMDD).	M DT 6/6
Implementation Note: Express the originating activity's date of reply submission.			
Mandatory	BCD02 475	Credit/Debit Adjustment Number Number assigned by issuer of a credit or debit memo.	M AN 1/16
Implementation Note: Use a Z for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The Z entry satisfies the X12 usage requirements; the receiving application software shall not process it.			
Mandatory	BCD03 305	Transaction Handling Code Code designating the action to be taken by all parties. B Debit/Credit Advice No Remittance Detail	M ID 1/2
Code Value Implementation Note: Use to indicate a billing office reply to a adjustment request.			
Mandatory	BCD04 610	Amount Monetary amount.	M N2 1/15
Implementation Note: Use to indicate the total for the total approved invoice adjustments. The amount will be dollars and cents. A decimal point should not be used.			

Mandatory	BCD05	478	Credit/Debit Flag Code Code indicating whether amount is a credit or debit C Credit D Debit	M	ID	1/1
Optional	BCD06	373	Date Date (YYMMDD).	O	DT	6/6
	Implementation Note: Cite the invoice date which applies to both the request and reply.					
Conditional	BCD07	76	Invoice Number Identifying number assigned by issuer.	C	AN	1/22
	Implementation Note: Cite the invoice number which applies to both the request and reply.					
Not Used	BCD08	424	Vendor Order Number	O	AN	1/22
Optional	BCD09	373	Date Date (YYMMDD).	O	DT	6/6
	Implementation Note: Cite the billed office credit/debit adjustment request (TS 812) date associated with this reply.					
Conditional	BCD10	324	Purchase Order Number Identifying number for Purchase Order assigned by the orderer/purchaser.	C	AN	1/22
	Implementation Note: Use to indicate the billed office credit/debit adjustment request (TS 812) number associated with this reply.					
Required	BCD11	353	Transaction Set Purpose Code Code identifying purpose of transaction set. 00 Original 45 Followup Code Value Implementation Note: Use to denote followup reply. 77 Simulation Exercise Code Value Implementation Note: Use to identify a simulated mobilization exercise transaction set. Activities initiating simulated mobilization exercises must ensure complete coordination with all activities involved. All transaction set recipients must use extreme caution to ensure that individual transactions do not process as action documents which affect accountable records.	O	ID	2/2
Required	BCD12	640	Transaction Type Code Code specifying the type of transaction. Implementation Note: Use to indicate an interfund or noninterfund invoice associated with the BCD07 invoice number. CA Cash Code Value Implementation Note: Use to identify the reference invoice as a noninterfund invoice. PP Prepaid Invoice Code Value Implementation Note: Use to identify the reference invoice as an interfund invoice.	O	ID	2/2
Not Used	BCD13	128	Reference Number Qualifier	C	ID	2/2

Not Used	BCD14	127	Reference Number	C	AN	1/30
Not Used	BCD15	306	Action Code	O	ID	1/2

Optional

Segment: PER Administrative Communications Contact

Level: Header

Loop: _____

Usage: Optional

Max Use: >1

Purpose: To identify a person or office to whom administrative communications should be directed

- Syntax:**
1. P0304 — If either PER03 or PER04 is present, then the other is required.
 2. P0506 — If either PER05 or PER06 is present, then the other is required.
 3. P0708 — If either PER07 or PER08 is present, then the other is required.

Implementation Notes:

1. Use only under exceptional circumstances when requiring direct communication with the party originating the transaction set.
2. Use multiple repetition to identify a POC and multiple communication numbers. When using multiple repetitions to identify different communication numbers for a single POC, repeat the name cited in PER02.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
PER01	366	Contact Function Code Code identifying the major duty or responsibility of the person or group named.	M ID 2/2

IC Information Contact

Code Value Implementation Note:

Always use in the first repetition to identify the primary point of contact and their primary communication numbers.

Optional

PER02	93	Name Free-form name.	O AN 1/35
-------	----	--------------------------------	-----------

Implementation Note:

Provide the last name, first name, middle initial, and rate/rank/title of the individual named as POC. Include spaces between name components and periods after initials. Do not include NMN when a middle initial is not available.

Conditional

PER03	365	Communication Number Qualifier Code identifying the type of communication number.	C ID 2/2
-------	-----	---	----------

Implementation Notes:

1. Use to identify the preferred method of communication in the first repetition. Use PER05/6 and PER07/8 to identify additional communication numbers. Use additional repetitions of PER to identify more than three numbers.
2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Conditional	PER07 365 Communication Number Qualifier	X ID 2/2
	Code identifying the type of communication number.	

Implementation Notes:

1. Use to identify an alternate, or secondary, communications number which can be used to contact the specified POC.

2. Do not include blank spaces or dashes between numbers.

AU Defense Switched Network

Code Value Implementation Note:

Use to identify the DSN telephone number.

EM Electronic Mail

FT Federal Telecommunications System (FTS)

Code Value Implementation Note:

Use to identify the FTS telephone number.

FX Facsimile

Code Value Implementation Note:

Use to identify the facsimile DSN telephone number.

IT International Telephone

Code Value Implementation Note:

Include country and city code as needed.

TE Telephone

Code Value Implementation Note:

Use to identify commercial telephone number. Include area code and number.

TL Telex

TX TWX

Conditional	PER08 364 Communication Number	X AN 1/80
	Complete communications number including country or area code when applicable.	

Not Used	PER09 443 Contact Inquiry Reference	O AN 1/20
----------	---	-----------------

	Segment: AT Financial Accounting

Not Used	AT10	1270	Code List Qualifier Code	O ID	1/3

Required

Segment: N1 Name
Level: Header
Loop: N1 **Repeat:** 200
Usage: Mandatory
Max Use: 1
Purpose: To identify a party by type of organization, name and code
Syntax: 1. R0203 — At least one of N102 or N103 is required.
2. P0304 — If either N103 or N104 is present, then the other is required.
Comments: 1. This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.
2. N105 and N106 further define the type of entity in N101.

Implementation Notes:
1. Use for both interfund and noninterfund adjustment replies.
2. Use the 1/N1/100 loop to identify the organization originating the transaction set and the organization to receive the transaction set.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	N101	98	Entity Identifier Code Code identifying an organizational entity, a physical location, or an individual BT Bill-to-Party Code Value Implementation Note: Use to identify the billed office. II Issuer of Invoice Code Value Implementation Note: Use to identify the billing office. Z1 Party to Receive Status Code Value Implementation Note: Use to indicate the party to receive status when different from the Service/Agency prescribed status recipient. Use multiple iterations of the 1/N1/100 loop to identify all status recipients, as required.	M ID 2/2
Conditional	N102	93	Name Free-form name.	C AN 1/35
Required	N103	66	Identification Code Qualifier Code designating the system/method of code structure used for Identification Code (67). 10 Department of Defense Activity Address Code (DODAAC) M4 Department of Defense Routing Identifier Code (RIC)	C ID 1/2
Conditional	N104	67	Identification Code Code identifying a party or other code.	C AN 2/20
Not Used	N105	706	Entity Relationship Code	O ID 2/2

Optional

N106

98

Entity Identifier Code

O ID 2/2

Code identifying an organizational entity, a physical location, or an individual

Implementation Note:

Must use codes FR and TO in conjunction with the appropriate 1/N1/100 code to indicate the organizations sending and receiving the transaction set.

FR Message From

Code Value Implementation Note:

Use to indicate that the organization cited in N104 transmitted the transaction set.

TO Message To

Code Value Implementation Note:

Use to indicate that the organization cited in N104 is to receive the transaction set.

Optional

Segment: **LM** Code Source Information

Level: Header

Loop: LM **Repeat:** 10

Usage: Optional

Max Use: 1

Purpose: To transmit standard code list identification information

Comment: LM02 identifies the applicable industry code list source information.

Implementation Note:

Use this 1/LM/155 loop to identify DoD unique data when any specific LQ01 qualifier code (e.g., 0) applies to ALL table 2 iterations and the same LQ02 DoD code applies to all or most of the table 2 iterations. For any specific table 2 iteration where the DoD code is to differ from the one indicated in table 1, use the 2/LM/205 loop and specify the matching qualifier in LQ01 and the different DoD code in LQ02. The code will override the table 1 DoD code for the current table 2 iteration (see override discussion in volume 1, chapter 10.) Do not cite any qualifier code in 1/LQ01/156 that does not apply to all the table 2 iterations. (Codes subject to override: 0, DE, and DG.)

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Mandatory	LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M	ID	2/2
Not Used	LM02	822	Source Subqualifier	O	AN	1/15

Segment: LQ Industry Code
Level: Header
Loop: LM
Usage: Mandatory
Max Use: 100
Purpose: Code to transmit standard industry codes
Syntax: C0102 — If LQ01 is present, then LQ02 is required.

Implementation Note:

Use to identify codes, as appropriate, consistent with management information requirements.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
Optional	LQ01	1270	Code List Qualifier Code Code identifying a specific industry code list 0 Document Identification Code DE Signal Code DG Fund Code	O	ID	1/3
Conditional	LQ02	1271	Industry Code Code indicating a code from a specific industry code list	C	AN	1/20

Required

Segment: CDD Credit/Debit Adjustment Detail

Level: Detail

Loop: CDD **Repeat:** >1

Usage: Optional

Max Use: 1

Purpose: To provide information relative to a line item adjustment

- Syntax:**
1. R0407 — At least one of CDD04 or CDD07 is required.
 2. C0711 — If CDD07 is present, then CDD11 is required.
 3. P0708 — If either CDD07 or CDD08 is present, then the other is required.
 4. P1011 — If either CDD10 or CDD11 is present, then the other is required.
 5. P1213 — If either CDD12 or CDD13 is present, then the other is required.

Semantic: CDD05 is the code indicating whether adjustment is for returned goods. A "Y" confirms that the shipment is for returned goods.

Comment: If comparison pricing is used, then CDD12 and CDD13 are required.

Implementation Note:

Use each repetition of the 2/CDD/160 loop as a reply to a request for a billing adjustment for the specified invoice. Cite the billing status code in the 2/LM/205 loop for each request approved or disapproved.

Data Element Summary

	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
Mandatory	CDD01	426	Adjustment Reason Code Code indicating reason for credit memo, or adjustment to invoice, credit memo, or payment.	M ID 2/2
			Implementation Note: Use a ZZ for this data element. DLMS does not use this data element, but it is mandatory in the X12 standards. The ZZ entry satisfies the X12 requirements; the receiving application software shall not process it.	
Mandatory	CDD02	478	Credit/Debit Flag Code Code indicating whether amount is a credit or debit C Credit D Debit	M ID 1/1
Optional	CDD03	350	Assigned Identification Alphanumeric characters assigned for differentiation within a transaction set.	O AN 1/11
			Implementation Note: Use as a counter to identify the number of 2/CDD/160 loop iterations. In the first 2/CDD/160 loop iteration, cite numeric 1. In each subsequent loop iteration, increase incrementally by 1.	
Required	CDD04	610	Amount Monetary amount.	C N2 1/15

Implementation Note:

Use to identify the adjustment amount approved for each 2/CDD/160 loop. The amount will be in dollars and cents. If the request is not approved, cite numeric 0.

Not Used	CDD05	1073	Yes/No Condition or Response Code	O	ID	1/1
Not Used	CDD06	417	Price Bracket Identifier	O	AN	1/3
Conditional	CDD07	477	Credit/Debit Quantity Number of supplier units credited or debited.	C	R	1/10

Implementation Notes:

1. Use to identify the quantity related to the adjustment reply, if appropriate.
2. Express as a whole number with no decimals. For example, if the quantity is 20, cite only 20.

Conditional	CDD08	355	Unit or Basis for Measurement Code Code specifying the units in which a value is being expressed, or manner in which a measurement has been taken	C	ID	2/2
-------------	-------	-----	--	---	----	-----

Implementation Note:

Use to identify the unit of issue of the adjustment quantity.

Not Used	CDD09	427	Unit Price Difference	O	R	1/9
Conditional	CDD10	236	Price Identifier Code Code identifying pricing specification.	C	ID	3/3

INV Invoice Billing Price

Code Value Implementation Note:

Use to identify the invoice price.

Conditional	CDD11	212	Unit Price Price per unit of product, service, commodity, etc.	C	R	1/17
-------------	-------	-----	---	---	---	------

Implementation Note:

Use to identify the unit price of the adjustment quantity. Use a decimal point if the unit price is other than whole dollars.

Not Used	CDD12	236	Price Identifier Code	C	ID	3/3
Not Used	CDD13	212	Unit Price	C	R	1/17

Optional

Segment: LIN Item Identification

Level: Detail

Loop: CDD

Usage: Optional

Max Use: 1

Purpose: To specify basic item identification data.

- Syntax:**
1. P0405 — If either LIN04 or LIN05 is present, then the other is required.
 2. P0607 — If either LIN06 or LIN07 is present, then the other is required.
 3. P0809 — If either LIN08 or LIN09 is present, then the other is required.
 4. P1011 — If either LIN10 or LIN11 is present, then the other is required.
 5. P1213 — If either LIN12 or LIN13 is present, then the other is required.
 6. P1415 — If either LIN14 or LIN15 is present, then the other is required.
 7. P1617 — If either LIN16 or LIN17 is present, then the other is required.
 8. P1819 — If either LIN18 or LIN19 is present, then the other is required.
 9. P2021 — If either LIN20 or LIN21 is present, then the other is required.
 10. P2223 — If either LIN22 or LIN23 is present, then the other is required.
 11. P2425 — If either LIN24 or LIN25 is present, then the other is required.
 12. P2627 — If either LIN26 or LIN27 is present, then the other is required.
 13. P2829 — If either LIN28 or LIN29 is present, then the other is required.
 14. P3031 — If either LIN30 or LIN31 is present, then the other is required.

Semantic: LIN01 is the line item identification

- Comments:**
1. See the Data Dictionary for a complete list of ID's.
 2. LIN02 through LIN31 provide for fifteen (15) different product/service ID's for each item. For Example: Case, Color, Drawing No., UPC No., ISBN No., Model No., SKU.

Implementation Notes:

1. Use to identify the item shipped. Perpetuate this data from the requisition unless using a substitute item.
2. Use data element 235/234 pairs to identify data pertinent to the transaction. Present the information in any sequential order. Unless otherwise specified, the multiple codes listed for a single qualifier data element identify the range of possible data requirements. When needed, use the next available combination of data element 235/234 pairs to provide the necessary data.

Data Element Summary

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
--------------	-----------------	------	------------

Not Used	LIN01	350	Assigned Identification	O	AN	1/11
Mandatory	LIN02	235	Product/Service ID Qualifier	M	ID	2/2

Code identifying the type/source of the descriptive number used in Product/Service ID (234).

Implementation Notes:

1. Use only one of codes A1, A2, A4, FB, FS, FT, MG, or YP to properly identify the material requisitioned.
2. When citing a manufacturer's part number (code MG), always use code ZB to identify the manufacturer's CAGE.
3. When citing the Federal Supply Classification (code FT), always use code CN to identify the commodity name or description.

A1 Plant Equipment Number**Code Value Implementation Note:**

Use to identify plant equipment.

A2 Department of Defense Identification Code (DoDIC)**Code Value Implementation Note:**

Use to identify ammunition items.

A4 Subsistence Identification Number**Code Value Implementation Note:**

Use to identify subsistence items.

CN Commodity Name**Code Value Implementation Note:**

Use only with code FT to identify the material name or description.

FB Form Number**Code Value Implementation Note:**

Use to identify the form stock number.

FS National Stock Number**Code Value Implementation Note:**

Must use the NSN if known.

FT Federal Supply Classification**Code Value Implementation Note:**

Use to identify nonstandard material when a part number is not available and material can only be ordered by description.

JP Package Type Code**Code Value Implementation Note:**

Must use when material must meet OCONUS packaging and preservation requirements. When used, the paired data element 234 will cite 1 indicating that packaging must meet OCONUS specifications. When not used, CONUS level specifications are adequate.

MG Manufacturer's Part Number**Code Value Implementation Note:**

Use to identify nonstandard material.

YP Publication Number**Code Value Implementation Note:**

Use to identify the publication stock number.

ZB Commercial and Government Entity (CAGE) Code**Code Value Implementation Note:**

Use only with code MG to identify a manufacturer's part number.

Mandatory	LIN03	234	Product/Service ID Identifying number for a product or service.	M	AN	1/40
Conditional	LIN04	235	Product/Service ID Qualifier Code identifying the type/source of the descriptive number used in Product/Service ID (234).	C	ID	2/2

Required

Segment: N9 Reference Number**Level:** Detail**Loop:** CDD**Usage:** Optional**Max Use:** >1**Purpose:** To transmit identifying numbers and descriptive information as specified by the reference number qualifier**Syntax:** 1. R0203 — At least one of N902 or N903 is required.
2. C0605 — If N906 is present, then N905 is required.**Semantic:** N906 reflects the time zone which the time reflects.**Implementation Note:***Use the first 2/N9/200 loop iteration to identify the transaction number for the detailed invoice billing record adjustment.***Data Element Summary**

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
N901	128	Reference Number Qualifier Code qualifying the Reference Number. IV Seller's Invoice Number Code Value Implementation Note: <i>Use for the invoice that previously provided the funding for this request.</i> OI Original Invoice Number Code Value Implementation Note: <i>Use to identify the first invoice where this billing was recorded.</i> TN Transaction Reference Number Code Value Implementation Note: <i>Use to identify the transaction number associated with the billing adjustment request.</i> W8 Suffix Code Value Implementation Note: <i>Use to identify the suffix of a transaction number for a quantity less than the original quantity.</i>	M	ID	2/2
Required	N902	127 Reference Number Reference number or identification number as defined for a particular Transaction Set, or as specified by the Reference Number Qualifier.	C	AN	1/30
Not Used	N903	369 Free-form Description	C	AN	1/45
Not Used	N904	373 Date	O	DT	6/6
Not Used	N905	337 Time	C	TM	4/8
Not Used	N906	623 Time Code	O	ID	2/2

Optional

Segment: DTM Date/Time Reference

Level: Detail

Loop: CDD

Usage: Optional

Max Use: 5

Purpose: To specify pertinent dates and times

Syntax: 1. R020306 — At least one of DTM02, DTM03 or DTM06 is required.
2. P0607 — If either DTM06 or DTM07 is present, then the other is required.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
DTM01	374	Date/Time Qualifier Code specifying type of date or time, or both date and time. 188 Credit Advice <i>Code Value Implementation Note:</i> Use to identify the credit date. 368 Submittal <i>Code Value Implementation Note:</i> Use to identify the originator's reply date when it differs from BCD01. 703 Original Transaction <i>Code Value Implementation Note:</i> Use to identify the date of the first invoice where this billing was recorded. Segment: LM Code Source Information**Level:** Detail**Loop:** LM **Repeat:** 10**Usage:** Optional**Max Use:** 1**Purpose:** To transmit standard code list identification information**Comment:** LM02 identifies the applicable industry code list source information.**Implementation Note:**

For any specific table 2 iteration, use this 2/LM/205 loop as needed 1) to identify a DoD code when the LQ01 qualifier code does not apply to all table 2 iterations and therefore was NOT indicated in the 1/LM/155 loop or 2) to identify a DoD code when the LQ01 qualifier applies to all table 2 iterations but the LQ02 DoD code varies among most of them or 3) to override an LQ02 DoD code in the 1/LM/155 loop with a different DoD code in the 2/LM/205 loop when the same LQ01 qualifier is used in both loops but the LQ02 DoD code is different. (Codes subject to override: 0, DE, and DG.)

Data Element Summary

Mandatory

Not Used

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
LM01	559	Agency Qualifier Code Code identifying the agency assigning the code values. DF Department of Defense (DoD)	M ID 2/2
LM02	822	Source Subqualifier	O AN 1/15

Mandatory	Segment:	LQ Industry Code				
	Level:	Detail				
	Loop:	LM				
	Usage:	Mandatory				
	Max Use:	100				
	Purpose:	Code to transmit standard industry codes				
	Syntax:	C0102 — If LQ01 is present, then LQ02 is required.				
Implementation Notes:						
1. Use to identify codes, as appropriate, consistent with management information requirements.						
2. Use the first 2/LM/205 loop iteration to identify the billing status code associated with the approval or disapproval of the request.						
Data Element Summary						
Optional	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
	LQ01	1270	Code List Qualifier Code	O	ID	1/3
			Code identifying a specific industry code list			
			0 Document Identification Code			
			53 Billing Status Code			
			Code Value Implementation Note:			
			Use to indicate the request's approval or disapproval.			
			DE Signal Code			
			DG Fund Code			
	Conditional	LQ02	1271	Industry Code	C	AN
			Code indicating a code from a specific industry code list			

Mandatory

Segment: **SE** Transaction Set Trailer

Level: Detail

Loop: _____

Usage: Mandatory

Max Use: 1

Purpose: To indicate the end of the transaction set and provide the count of the transmitted segments (including the beginning (ST) and ending (SE) segments).

Comment: SE is the last segment of each transaction set.

Implementation Note:

See control structure discussion in volume 1, chapter 6.

Data Element Summary

Mandatory

REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
SE01	96	Number of Included Segments Total number of segments included in a transaction set including ST and SE segments.	M NO 1/10

Mandatory

SE02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9

5 INTERFUND BILLING SYSTEM PROCEDURES

Standard procedures and EDI conventions for use of DLMS standards in the interfund billing system are currently under development. These standards will provide for seller reporting, buyer acceptance, and finance center exchange of information concerning interfund transfers.

6 TRANSPORTATION BILLING PROCEDURES

Standard procedures and EDI conventions for use of DLMS standards in billing for transportation services rendered by the Military Airlift Command (MAC), the Military Sealift Command (MSC), and the Military Traffic Management Command (MTMC) will be included. In addition, standard procedures and EDI conventions for use of transportation account codes (TACs) in DLMS standards and any necessary update procedures will also be covered by this chapter.

SECTION 1 -

DLMS MAPPINGS

DEFENSE LOGISTICS MANAGEMENT SYSTEM (DLMS)

DLSS - DLMS MAPPINGS

INTRODUCTION AND PURPOSE

The attached charts provide cross-reference mappings between existing Defense Logistics Standard System (DLSS) 80-character fixed-length record transaction sets and the Defense Logistics Management System (DLMS) variable-length EDI transaction sets.

These mappings are intended to assist organizations responsible for the programming of the DLSS to DLMS conversions. Specifically they readily show for each DLSS transaction where each field of data can be found in the corresponding DLMS transaction set. They also show all expanded data carried in the DLMS which is not included in the existing DLSS.

The mappings are organized by DLMS transaction set number (140, 180, etc.). Within each transaction set there will be one or more charts showing the included DLSS transactions. Within each transaction chart the data is ordered by record positions as in the same manner that they appear in the MILSTRIP, MILSTRAP, etc., format appendices.

These mappings are intended only as an aid to understanding and using the DLMS implementation conventions (ICs) they are not intended to be used alone or without training in utilizing EDI. The ICs themselves are the authorized references to be used in documenting and understanding the use of the DLMS.

STANDARD ASSUMPTIONS THAT WILL APPLY TO ALL DLSS- DLMS MAPPINGS

Multiple Transactions: Almost all DLMS transactions are capable of transmitting one or more equivalent DLSS transactions. For example a single DLMS 511 can transmit one or more A0_ DLSS requisitions. Data applying to all of the "transactions" within the transaction set is carried in table 1 segments while data applying to specific transactions is carried a segment of the same name in table 2. segments. These mappings identify only the segment name, they do not indicate whether the segment appears in table 1,2, or both.

The DLMS also permits multiple occurrences of many other data fields such as Advice codes and status-to addresses. Refer to the ICs to identify these.

Dates: The DLSS uses a variety of date formats, but most use the last position of the year and then the ordinal day. DLMS always uses a YYMMDD format. Dates are mostly contained in a DTM or G62 segments. DTM01 will contain a code that indicates the type of date (e.g., SH is shipped date) and DTM02 contains the actual date. Century is not carried in the DLMS. Applications responsible for meeting the DoD requirement for an eight-position date will have to add the century indicator.

Conversion Tables: DLSS codes for Units of Issue and Transportation Modes are not the same as the ASC X12 codes. Volume 1 of the DLMS manual provides a table to convert from one to the other.

ST and SE Segments: The ST segment is the first segment in every DLMS transaction set. It identifies start of the transaction set number (e.g., 511) and a unique transmission number. The SE is always the last segment. It identifies the end of the transaction set and repeats the unique transmission number. Because they are constant they are not routinely listed in the mapping sheets except for ST01 to indicate the transaction set number.

Negative Quantities: MILSTRAP (MILSTRIP does not use negative quantities) uses the concept of an 'X' overpunch in RP 25 to represent a transaction reversal. In the DLMS a negative sign in a quantity field will represent the reversal.

Transitional Codes: Several DLSS codes are being conveyed in the DLMS only during the transition period when both DLSS and DLMS are being widely used within DoD. When the DLSS is no longer being used they will be dropped. These include: Signal Code, Media and Status Code, Document Indicator Code (replaced by the transaction set number, codes in the beginning segment, and other data elements), and RICs (RICs will be replaced by DoDAACs or possibly DUNS numbers).

Service Unique Data: Many DLSS transaction carry Service-unique (intra-Service) data in various record positions. The DLMS variable-length transaction set possess an expanded capacity to carry such data. Generally, the LM/LQ segments were designed to transmit DoD and Service codes. However, all Service-unique data which is to be transmitted in the DLMS environments should be submitted to DLMSO for analysis of the best means to convey it.

Expanded Data: One of the key reasons for creating the DLMS was to meet DoD's growing logistics data requirements which the fixed-length records could not do. A list of this expanded data is shown in a separate section at the end of the transaction set.

Notation Format use in the Cross Reference Mappings

The location of data in a DLMS IC is indicated by the reference designator. This is composed of the segment identifier (e.g., N1 or PO1) and a two-position number indicating the data element position within the segment. For example DTM02 is the second data element in the DTM segment. N104 is the fourth data element in the N1 segment.

Sometimes the reference designator is followed by a slash (/) and some characters. The characters following the / are a specific code is to be used from that data element. For example REF01-2/NS would indicate that the code NS is to be used in REF01 to indicate a National Stock Number (NSN) and that the actual NSN will be in REF02.

DLSS Appendices: MODELS Version 1.1, C1-13 - Reclamation Requisition

DLMS ID: LS10

<u>DLSS FIELD</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0 - <i>Document Identification Code</i>
Routing Identifier (TO)	4 – 6	N103-4/M4 - <i>Department of Defense Routing Identifier Code (RIC) when N106/TO</i>
Media and Status	7	LQ01-2/DF- <i>Media and Status Code</i>
Stock or Part Number	8 – 22	PO106-7/FS- <i>NSN</i>
If data in rp 12-13 is 00 or 01 use DLMS code FS		PO106-7/MG- <i>Manufacturer's Part Number</i>
		PO108-9/ZB- <i>Manufacturer's CAGE Code</i>
If data in rp 8-9 is 89 use DLMS code A4		PO106-7/A4- <i>Subsistence Identification Number</i>
Otherwise use DLMS code MG		The following item identification codes are DLMS enhancements:
		PO106-7/A1- <i>Plant Equipment Number</i>
		PO106-7/A2- <i>DoDIC</i>
		PO106-7/FB- <i>Form Number</i>
		PO106-7/FT- <i>Federal Supply Classification</i>
		PO108-9/CN- <i>Commodity Name</i>
		PO106-7/YP- <i>Publication Number</i>
Subsistence Type of Pack	21	LQ01-2/87- <i>Subsistence Type of Pack Code</i>

DoD 4000.25-M-S-1
Version 2.0

Unit of Issue	23 – 24	PO103 use conversion table
Quantity	25 – 29	PO102
Document Number	30 – 43	N901-2/TN- <i>Transaction Reference Number</i>
Demand	44	DD01
Supplementary Address	45 – 50	N101/BS- <i>Bill and Ship To</i> N101/BT- <i>Bill-to-Party</i> N101/ST- <i>Ship To</i> See Appendix for mapping the supplementary address and use of BS, BT, and ST. N104 contains the DoDAAC or MAPAC
Signal	51	LQ01-2/DE- <i>Signal Code</i>
Fund	52 – 53	LQ01-2/DG- <i>Fund Code</i>
Distribution	54	LQ01-2/AK- <i>Distribution Code</i> See expanded data for status recipients
	55-56	Intra-Service data to be placed in LM/LQ. Specific codes not yet determined
Project	57 – 59	LQ01-2/78- <i>Project Code</i>
Priority	60 – 61	LQ01-2/79- <i>Priority Designator Code</i>
Owning Inventory Control Point	62 – 64	N103-4/M4 - <i>Department of Defense Routing Identifier Code (RIC)</i> when N101/Z4
Advice	65 – 66	LQ01-2/80- <i>Advice Code</i>
Blank	67 – 68	
Supply Condition	69	LQ01-2/83- <i>Supply Condition</i>

Blank

70 – 80

EXPANDED DATA

Transaction set preparation date	BR03
Transaction set preparation time	BR09
Supply Condition Code	LQ01-2/83
Ultimate Recipient Code	LQ01-2/97
Utilization Code	LQ01-2/AJ
Special Requirements Code	LQ01-2/AL
Transportation Priority Code	LQ01-2/BD
Points of Contact	G6101-2/IC
Communication Number (for points of contact)	G6103-4/Various Codes
Package Type Code	PO106-7/JP
Fund Purpose Code	AT01
Basic Appropriation	AT02
Supplemental Accounting Classification	AT09
Weapon System Number	DD03/W2
Service/Agency Code	DD05
Quantity associated with weapon system and demand code	DD07
Stock Level Indicator	DD08
Reason for Requisitioning Code	DD09

In-the-clear text that should appear on shipping containers

MAN01-3/R

Ordered By

N101/OB; N104 contains the DoDAAC

Party to Receive Status

N101/Z1; N104 contains the DoDAAC

Unserviceable Material Consignee

N101/Z2; N104 contains the DoDAAC

Mark-for Party

561 CONTRACT ABSTRACT

DLSS DICs: PAA, PBA, PEA

DLSS Appendices: MILSCAP C1 - Administrative Data Record #1

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
Effective Date or Order Date	23 – 29	2/G62/030 with G6201/ either code 04 or code 07 for the order or effective date. Actual dates are carried in G6202. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2
Reserved	30 – 44	N/A
Defense Priorities and Allocations System (DPAS)	45 – 48	2/N9/070 with N901/DS Defense Priorities and Allocation System (DPAS) Priority Rating in the contract iteration of the HL loop (HL03 = code IB). Actual DPAS rating is carried in N902 in accordance with MILSCAP Appendix A3
Identity Code: Issued By	55 – 60	1/N1/060 with N106/FR Message From, used to identify the purchasing office transmitting the abstract. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104

Indicator: Partial Abstract	61	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/9 Indicator Code and LQ02/9 indicating a partial abstract on accordance with MILSCAP Appendix A19
Identity Code: Contractor	62 – 67	1/N1/060 with N1/SE Selling Party, used to identify the contractor. The contractor's CAGE Code is signaled by code 33 in N103 and the actual CAGE Code is carried in N104
Identity Code: Contractor Facility	68 – 73	1/N1/060 with N1/FA Facility, used to identify the contractor facility. The contractor facility's CAGE Code is signaled by code 33 in N103 and the actual CAGE Code is carried in N104
Type of Business	74	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/2 Type of Business Code and LQ02/use any code indicating the type of business in accordance with MILSCAP Appendix A6
Indicator: Foreign Military Sales (FMS) Requirement	75	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/9 Indicator Code and LQ02/1 indicating an FMS requirement in accordance with MILSCAP Appendix A19
Reserved	76	N/A
Numbering: Record Count	77 – 80	N/A. Since the concept of individual records (80-column cards) cannot be migrated to an EDI transaction set, records are not counted in the 561 transaction set. The number of records can only be determined by an actual count of the records after a 561 transaction set is mapped back to a series of 80-column records and an actual count taken. Then, that count can be entered on the record

EXPANDED DATA:

Transaction set identifier code	ST01
Transaction set control number	ST02, SE02
Transaction set purpose code	BGN01
Reference number	BGN02
Time	BGN04
Transaction type code	BGN07
Hierarchical level	2/HL/010
Noun and service descriptions	Can be up to 30 characters in X12 but limited to 11 and 25 characters in DLMS
Number of included segments	SE01

561 CONTRACT ABSTRACT

DLSS DICs: PAB, PBB, PEB

DLSS Appendices: MILSCAP C2 - Administrative Date Record #2

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
Discount Terms	23 – 37	2/ITD/040 with ITD01/06 used to indicate that the contract carries additional discount terms (ITD01 is not used if the discount is carried in the segment and the segment is not used if there is no discount), ITD03 carries the percentage discount, ITD05 carries the number of days in the discount period, and ITD07 carries the net days. If there are no net days specified in the contract, ITD07 is not used. Only one discount can be carried in any one iteration of the ITD segment. Conversion between X12 and MILSCAP percent formats is required

Paying Office	38 – 43	2/N1/160 with N1/PR Payer, used to identify the paying office. The paying office DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104. There may be multiple iterations of the N1 loop with N101/PR if the contract contains more than one paying office. In that case, the number 9 will have to be applied to rp 38 of the PAB record and multiple PAD records generated
Indicator: Fast Pay	44	2/LM/140 loop in the contract or line item iteration of the HL loop (HL03 = code IB or I). LM01/DF Department of Defense, LQ01/9 Indicator Code and LQ02/F indicating a Fast Pay provision in accordance with MILSCAP Appendix A19
Amount: Total Amount of Contract	45 – 54	2/AMT/080 with AMT01/CT Contract. Decimals are not implied in the X12 syntax. Conversion to MILSCAP format might require prefixing number with zeros. A minus (-) sign can be used in X12 to indicate a decrease and it emulates the X overpunch in rp 54. A second record will have to be created in MILSCAP if the size of the number transmitted in X12 exceeds the size of this field. In that case, an X overpunch in rp 53 will be required, followed by an additional record with a code T in rp 54. If costs are not involved, the segment is not used. In that case, a conversion to fill rp 45 – 54 with zeros will be required
Date of Signature	55 – 61	2/G62/030 with G6201/BW for the signature date. Actual dates are carried in G6202. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2. For a purchase order, this data is the same date as the one carried in 2/G62/030 when G6201/04 is used. In this case, the date is the same one as mapped to rp 23 – 29 of the PAA record

Kind of Contract	62	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/3 Kind of Contract Code and LQ02/appropriate code indicating which kind of contract in accordance with MILSCAP Appendix A7
Type of Contract	63	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/4 Type of Contract Code and LQ02/appropriate code indicating which type of contract in accordance with MILSCAP Appendix A8
Identity Code: Abstract Recipient ADP Point	64 – 69	1/N1/060 with N106/TO Message To, used to identify the ADP Point of a PO, CAO, or other party receiving the abstract action. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104. For contracts issued by a PO, the abstract recipient is always the CAO activity reflected in rp 55 – 60 “Administered by” of the PAA record. When issued by a CAO, this field is filled with the ADP Point of the activity furnishing that type of support to the office that issued the letter of delegation authorizing the CAO tissue calls/orders
Criticality Designator	70	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/5 Criticality Designator Code and LQ02/appropriate code indicating which type of criticality designator in accordance with MILSCAP Appendix A9

Indicator: Contract Administration Functional Limitations	71	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/9 Indicator Code and LQ02/3 indicating that the contract contains functional limitations in accordance with MILSCAP Appendix A19
Reserved	72 - 74	N/A
Special Contract Provisions	75 - 79	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/6 Special contract provisions code and LQ02/any code indicating which provisions apply. While X12 allows for the transmission of as many codes as are applicable, MILSCAP can only accept 5 codes. Conversion to add trailing zeros will be required
Reserved	80	N/A

561 CONTRACT ABSTRACT

DLSS DICs: PAC, PBC, PEC

DLSS Appendices: MILSCAP C3 - Accounting Classification Record

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
ACRN	23 – 24	2/N9/130 with N901/AX Government Accounting Classification Reference Number (ACRN)
Accounting Classification Data: Appropriation, Limit/Subhead	25 – 34 35 – 38	2/AT/110 with AT02 carrying the basic appropriation, limit/subhead data. Suffixing with zeros may be required when creating a MILSCAP record. The numbers are concatenated in the X12 transaction set
Accounting Classification Data: Supplemental Accounting Classification	39 – 74	2/AT/110 with AT09 carrying the balance of the accounting classification data not contained in AT02. Data structure should be as specified in pages B2-1 through B2-5 of the MILSCAP manual
Identity Code: Accounting Station	75 – 80	2/N1/160 with N1/CW Accounting Station. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104

EXPANDED DATA:

561 CONTRACT ABSTRACT

DLSS DICs: PAD, PBD, PED

DLSS Appendices: MILSCAP C4 - Accounting Classification Trailer

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
ACRN	23 – 24	2/N9/130 with N901/AX Government Accounting Classification Reference Number (ACRN)
Special Reimbursable Provisions	25 – 35	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/27 Special Reimbursable Provisions Code and LQ02/any code, authorizing contingent services for which the contractor may be reimbursed, in accordance with MILSCAP Appendix A40. Left justification and remainder of field blank on the record
Reserved	36 – 44	N/A

Amount: Obligated
Amount 45 – 54

2/AMT/120 with AMT01/KC Obligated Amount in dollars and cents. Prefixing with zeros might be required on the record. A minus (-) sign can be used in X12 to indicate a decrease and it emulates the X overpunch in rp 54. A second record will have to be created in MILSCAP if the size of the number transmitted in X12 exceeds the size of this field. In that case, an X overpunch in rp 53 will be required, followed by an additional record with a code T in rp 54. If costs are not involved, the segment is not used. In that case, a conversion to fill rp 45 – 54 with zeros will be required. Zero fill of the record will be required if the record was issued only to identify the accounting classification chargeable for a non-CLIN/ELIN payment for which no obligation has been established. In that case this segment will not be used in the 2/AT/110 loop

Identity Code: Paying
Office 66 – 60

2/N1/160 with N1/PR Payer, used to identify the paying office. The paying office DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104. There may be multiple iterations of the N1 loop with N101/PR if the contract contains more than one paying office. In that case, the number 9 will have to be applied to rp 38 of the PAB record and multiple PAD records generated

561 CONTRACT ABSTRACT

DLSS DICs: PAE, PBE, PEE

DLSS Appendices: MILSCAP C5 - Supplies Line Item Data Record #1

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
CLIN or ELIN	23 – 28	2/PO1/050 with PO101 carrying the actual CLIN or ELIN to include a subline item number, if applicable. Prefixing with zeros may be required on the record. Subline item number maps to rp 27 - 28. Leave blank if no subline item number applies

Stock Number

29 – 43

2/PO1/050 with PO106 (and other even numbered data elements through PO112) carrying either code FS National Stock Number or code SW local Stock Number. Use code RR to indicate an undefinitized NSN; this equates to a code U in rp 29. Actual values will be carried in PO107 (and other odd numbered data elements through PO113). When an even number data element cites code RR, cite code Z in the corresponding odd numbered data element. A stock number can be suffixed by two positions of management data. The only way to determine if management data has been appended to a stock number is if the number is 15 characters long instead of 13. In that case, map the last two characters to rp 42 – 43 of the record. When a stock number is not applicable, do not use any of the codes in PO106. This equates to a code N in rp 29. Application program must be able to tell the difference between a CLIN and an ELIN based on the numbering systems prescribed in procurement regulations. A CLIN begins with a numeric character and an ELIN begins with an alpha character. When an ELIN is cited, enter code N in rp 29 of the record and the word "EXHIBIT" in rp 31 – 37 with rp 30 left blank, leaving the remainder of the field blank. If delivery schedules are applicable to a service line item use code SV in an even numbered data element. When transmitted in this manner, a code N will be entered into rp 29 of the record and the word "SERVICES" entered into rp 31 – 38 with rp 30 left blank. In this case, the Service Line Item Record will not be used

Quantity: Order Quantity 44 – 51

2/PO1/050 with PO102 citing the quantity ordered. Do not use when the quantity is either unknown (MILSCAP rp 44 is U) or an ELIN or Service is cited (MILSCAP rp 44 is N. Use the 2/LM/140 loop at the line item level to indicate estimated quantities. LM01/DF Department of Defense, LQ01/10 Transaction Status Indicator Code and LQ02/V. This emulates the X overpunch in rp 44. Prefixing with zeros may be required on the record. Minus signs are used to indicate decreases. This emulates an X overpunch in rp 51. If the quantity exceeds the limit of the record insert an X overpunch in rp 50 and generate another PAE record with the overflow quantity and the letter T in rp 44

Purchase Unit 52 – 53

2/PO1/050 with PO103 carrying the Unit or Basis for Measurement Code. Conversion to DoD Unit of Issue codes might be required

Amount: Unit Price 54 – 64

2/PO1/050 with PO104 carrying the Unit Price in dollars, cents and mills. Prefixing with zeros for dollars and cents, and suffixing with zeros for mills might be required on the record. If the mills exceed two positions, a code "9" must be entered on the record to indicate "see contract." An estimated unit price is signaled by code ES in PO105; this emulates the X overpunch in rp 54. An unavailable unit price is signaled by code TB in PO105; this emulates a code U in rp 54; when used a "0" shall be cited in PO104 unit price. When the unit price is not applicable, do not use the PO104/05 data elements; this emulates code N in rp 54. When the amount is not separately priced, use code NC in PO105; this emulates code C in rp 54; when used, a "0" shall be cited in PO104 unit price. A minus (-) sign can be used in X12 to indicate a decrease

Amount: Total Item 65 – 74
Amount

2/AMT/080 with AMT01/1 carrying the Total Item Amount in dollars and cents, rounded to the nearest cent. The actual amount will be carried in AMT02. Prefixing with zeros might be required on the record. A minus (-) sign can be used in X12 to indicate a decrease. This emulates an X overpunch in rp 74. Use code KA in AMT01-2 when the amount is estimated. This emulates an X overpunch in rp 65. An undefinitized price is signaled by code KD in AMT01. This emulates a code U in rp 65. When the unit price is not applicable, do not use the AMT segment. This emulates code N in rp 65. If the amount exceeds the limit of the record insert an X overpunch in rp 73 and generate another PAE record with the overflow amount and the letter T in rp 65

Identity Code: Item or 75 – 80
Project Manager

2/N1/160 with N1/KA Item Manager or KG Project Manager, used to identify the activity to receive follow-on records of shipment performance if not the “Issued By” office

EXPANDED DATA:

561 CONTRACT ABSTRACT

DLSS DICs: PAF, PBF, PEF

DLSS Appendices: MILSCAP C6 - Supplies Line Item Data Record #2

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
CLIN or ELIN	23 – 28	2/PO1/050 with PO101 carrying the actual CLIN or ELIN to include a subline item number, if applicable. Prefixing with zeros may be required on the record. Subline item number maps to rp 27 – 28. Leave blank if no subline item number applies
Text: Noun	29 – 39	2/PO1 using an odd/even pair of DEs 235/234 with the 235 DE citing code PD Part Number Description and the noun description carried in the DE 234 DE of the pair. The noun description must not exceed 11 positions on the record

Part Number	40 – 71	2/PO1/050 with PO106 and other even numbered data elements through PO112 carrying code MG Manufacturer's Part Number. When used, there must be another DE 235/235 pair used to cite code ZB to identify the associated CAGE code. The first 5 positions on the record (40 – 44) will be the CAGE Code. The remainder of the field will be the part number. Numbers are left justified and suffixed with blank spaces on the record. Fractions are written using three positions (e.g., 1/2)
Procurement Quality Assurance (PQA) Site	72	2/LM/140 loop in the contract or line item iteration of the HL loop (HL03 = code IB or I). LM01/DF Department of Defense, LQ01/7 Quality Assurance Site Code and LQ02/any code, in accordance with MILSCAP Appendix A14
Acceptance Site	73	2/LM/140 loop in the contract or line item iteration of the HL loop (HL03 = code IB or I). LM01/DF Department of Defense, LQ01/8 Acceptance Site Code and LQ02/any code, in accordance with MILSCAP Appendix A15
Free on Board (FOB) Cite (CLIN/ELIN Level)	74	2/LM/140 loop in the line item iteration of the HL loop (HL03 = code I). LM01/DF Department of Defense, LQ01/1 FOB Site Code and LQ02/any code, in accordance with MILSCAP Appendix A5
Quantity Variance Under	75 - 76	2/PCT/090 with PCT01/ code KB Variation in Quantity Over. The actual percent is carried in PCT02. Conversion from the X12 percent to the MILSCAP percent format will be required in accordance with MILSCAP Appendix A47. Right justification and zero fill may be required on the record

Quantity Variance Over 77 – 78

2/PCT/090 with PCT01/ code KA Variation in Quantity Over. The actual percent is carried in PCT02. Conversion from the X12 percent to the MILSCAP percent format will be required in accordance with MILSCAP Appendix A47. Right justification and zero fill may be required on the record

561 CONTRACT ABSTRACT

DLSS DICs: PAG, PBG, PEG

DLSS Appendices: MILSCAP C7 - Supplies Schedule Data Record

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
CLIN or ELIN	23 – 28	2/PO1/050 with PO101 carrying the actual CLIN or ELIN to include a subline item number, if applicable. Prefixing with zeros may be required on the record. Subline item number maps to rp 27 – 28. Leave blank if no subline item number applies
Identity Code: Ship-To	29 – 34	2/N1/160 with N101/ST Ship-To address. The DoDAAC and MAPAC are signaled by codes 10 and A2 respectively in N103 and the actual Code is carried in N104. Do not use the segment if the Ship-To address is undefinitized. This equates to a code U in rp 29 of the record

Identity Code: Mark-For 35 – 40

2/N1/160 with N101/Z7 Mark-For address. The DoDAAC and MAPAC are signaled by codes 10 and A2 respectively in N103 and the actual Code is carried in N104. Do not use the segment if the contract does not contain a Mark-For address. Cite code Y in N104 when the address is meaningful only to the recipient. This equates to a code Y in rp 35 of the record

Delivery Schedule Date 41 – 47

2/G62/030 with G6202 carrying the actual date and G6201 carrying either code 70 for the scheduled delivery date, or code 17 if the date is estimated. Use of code 17 emulates the X overpunch in rp 41. Use codes 17 and 70 for supplies and BO and KA for services. When deliveries are scheduled against different Ship-To/Mark- For addresses, it may be better to use the 2/SCH/210 loop. In that case, SCH06 will carry the actual date and SCH05 will carry either code 996 for the required delivery date, or code 017 for estimated (this equates to an X overpunch in rp 41, when describing supplies. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2. Do not use the segment when the date is undefinitized. This equates to code U in rp 41

Quantity: Delivery Schedule Quantity	48 – 55	2/SCH/210 with SCH01 carrying the actual quantity. Right justification required, and zero fill possible on the record. If the quantity is estimated, use the 2/LM/140 loop at the line item level to indicate estimated quantities. LM01/DF Department of Defense, LQ01/10 Transaction Status Indicator Code and LQ02/---. This emulates the X overpunch in rp 48. Prefixing with zeros may be required on the record. When the quantity is undefinitized do not use the segment. This emulates a code U in rp 48. Minus signs are used to indicate decreases. This emulates an X overpunch in rp 55. If the quantity exceeds the limit of the record insert an X overpunch in rp 50 and generate another PAG record with the overflow quantity and the letter T in rp 48
ACRN	56 – 57	HL03/2, 2/N9/130 with N901/AX Government Accounting Classification Reference Number (ACRN). If the transaction set contains multiple ACRNs for a single line item, enter code 9 followed by a blank on the record. When the ACRN cannot be determined, do not use the segment. This equates to a code U in rp 56 followed by a blank
Reserved	58	N/A
Transportation Priority (TP)	59	2/LM/140 loop at the line item level to indicate Transportation Priority. LM01/DF Department of Defense, LQ01/BD Transportation Priority Code and LQ02/ any code, in accordance with MILSCAP Appendix A29
MILSTRIP Document Number	60 – 73	2/N9/070 with N901/TN for the MILSTRIP Document Number (e.g., the requisition number), and the actual number in N902. Where multiple MILSTRIP document numbers apply to the line item use 2/SCH11/210

MILSTRIP Suffix	74	2/N9/070 with N901/W8 for the MILSTRIP Document Number (e.g., the requisition number), and the actual number in N902
CLIN/Subline (for Exhibit)	75 - 80	If PO101 cites an ELIN (mapped to rp 23 – 28 of the record) then the applicable CLIN which established that ELIN must be cited in 2/N9/070 with N901/C7 for the CLIN, and the actual CLIN in N902

Number of included segments	SE01

561 CONTRACT ABSTRACT

DLSS DICs: PAH, PBH, PEH

DLSS Appendices: C8 - Services Line Item Data Record

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
CLIN	23 – 28	2/PO1/050 with PO101 carrying the actual CLIN to include a subline item number, if applicable. Prefixing with zeros may be required on the record. Subline item number maps to rp 27 – 28. Leave blank if no subline item number applies
Text: Description of Services	29 – 53	2/PO1 using an odd/even pair of DEs 235/234 with the 235 DE citing code SV Service Rendered and the text description carried in the DE 234 DE of the pair. The text description must not exceed 25 positions on the record
Procurement Quality Assurance (PQA) Site	54	2/LM/140 loop in the contract or line item iteration of the HL loop (HL03 = code IB or I). LM01/DF Department of Defense, LQ01/7 Quality Assurance Site Code and LQ02/any code, in accordance with MILSCAP Appendix A14

Acceptance Site	55	2/LM/140 loop in the contract or line item iteration of the HL loop (HL03 = code IB or I). LM01/DF Department of Defense, LQ01/8 Acceptance Site Code and LQ02/any code, in accordance with MILSCAP Appendix A15
ACRN	56 – 57	2/N9/130 with N901/AX Government Accounting Classification Reference Number (ACRN). If the transaction set contains multiple ACRNs for a single line item, enter code 9 followed by a blank on the record
Service Completion Date	58 – 64	2/G62/030 with G6202 carrying the actual date and G6201 carrying either code KA for the scheduled service completion date, or code 17 if the date is estimated. Use of code 17 emulates the X overpunch in rp 58. When the date is undefinitized, do not use the segment. This emulates a code U in rp 58. When performance is scheduled against different addresses, it may be better to use the 2/SCH/210 loop. In that case, SCH06 will carry the actual date and SCH05 will carry either code 151 for the required service completion date, or code 245 for estimated (this equates to an X overpunch in rp 58. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2

Amount: Total Item 65 – 74
Amount

2/AMT/080 with AMT01 carrying the Total Item Amount in dollars and cents. The actual amount will be carried in AMT02. Prefixing with zeros might be required on the record. A minus (-) sign can be used in X12 to indicate a decrease. This emulates an X overpunch in rp 74. Use code KA in AMT01 when the amount is estimated. This emulates an X overpunch in rp 65. An undefinitized price is signaled by code KD in AMT01. This emulates a code U in rp 65. When the unit price is not applicable, do not use the AMT segment. This emulates code N in rp 65. If the amount exceeds the limit of the record insert an X overpunch in rp 73 and generate another PAE record with the overflow amount and the letter T in rp 65

Identity Code: Item or 75 – 80
Project Manager

2/N1/160 with N1/KA Item Manager or KG Project Manager, used to identify the activity to receive follow-on records of shipment performance if not the “Issued By” office

DLMS ID: LC04

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	LQ01-2/0- <i>Document Identification Code</i>
PIIN	4 – 16	CS01 – Contract Number in the contract iteration of the 2/HL/010 loop (HL03 = code IB)
SPIIN: Call/Order	17 – 22	CS03 Release Number to carry the actual call or order number and its modification or CS02 to carry the PIIN modification number in the contract iteration of the 2HL/010 loop (HL03 = code IB)
Effective Date of Modification	23 – 29	2/G62/030 with G6201/85 signaling the effective date of the modification and the actual date carried in G6202. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2
Modification Authority	30 – 44	2/N9/130 with N901/BB Authorization Number. The actual modification authority is carried in N902
Reserved	45 – 48	N/A
Identity Code: Issued By	49 – 54	1/N1/060 with N106/FR Message From, used to identify the office originating the modification or correction abstract. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104

Identity Code: Administered By	55 – 60	1/N1/060 with N1/C4 Contract Administration Office. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104
Kind of Modification	61	2/LM/140 loop in the contract iteration of the HL loop (HL03 = code IB). LM01/DF Department of Defense, LQ01/28 Kind of Modification Code and LQ02/use any code indicating the type of business in accordance with MILSCAP Appendix A41
Reserved	62 – 63	N/A
Identity Code: Abstract Recipient ADP Point	64 – 69	1/N1/060 with N106/TO Message To, used to identify the ADP Point of a the activity furnishing ADP support to the abstract recipient. The DoDAAC is signaled by code 10 in N103 and the actual DoDAAC is carried in N104. For contracts issued by a PO, the abstract recipient is always the CAO activity reflected in rp 55 – 60 “Administered by” of the PAA record. When issued by a CAO, this field is filled with the ADP Point of the activity furnishing that type of support to the office that issued the letter of delegation authorizing the CAO to issue calls/orders
Date of Signature	70 – 76	2/G62/030 with G6201/BV signaling the date that the modification document was signed. The actual date is carried in G6202. Use in conjunction with a table to convert the X12 YYMMDD format to the DLSS format prescribed in MILSCAP Appendix A2

Numbering: Record Count 77 – 80

N/A. Since the concept of individual records (80-column cards) cannot be migrated to an EDI transaction set, records are not counted in the 561 transaction set. The number of records can only be determined by an actual count of the records after a 561 transaction set is mapped back to a series of 80-column records and an actual count taken. Then, that count can be entered on the record

568 CONTRACT PAYMENT MANAGEMENT REPORT

DLSS DICs: PVA

DLSS Appendices: MILSCAP C22 - Text Header Record

DLMS ID: LC05

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 - 3	LQ01-2/0- <i>Document Identification Code</i>
Record Legend	4 - 20	Not used in DLMS
Item Count	21 - 24	Not used in DLMS
Reserved	25 - 28	N/A
Batch Sequence Number	29	Not used in DLMS
CPN Recipient	30 - 35	1/N1/040 segment with N106 = code TO, N103 code 10, and N104 carrying the actual DoDAAC code
Disbursing Officer	36 - 41	2/N1/140 segment with N101 = code KV. N103 = code M3 for payment made by a disbursing officer, and N104 carrying the actual DSSN code. Instead use 1/N101/04 only for dummy end of month report
Batch Serial Number	42 - 44	Not used in DLMS. Use the 1/AMT/030 segment with AMT01/MP to indicate a dummy end of month report. When used in this manner, insert the number 0 in AMT02
Reserved	45	N/A
Reserved	46 - 51	N/A
Reserved	52 - 57	N/A

Collected Amount	58 - 68	1/AMT/030 segment with AMT01/KL and the actual collected amount for the entire transaction set carried in AMT02. Or use the 2/AMT/100 segment with AMT01/KL and the actual collected amount for the CPN in AMT02. When the transaction set is for a dummy end of month report rp58-68 will be blank and 1/AMT/030 will have AMT01/MP and AMT02 will be zero
Disbursed Amount	69 - 79	1/AMT/030 segment with AMT01/KM and the actual disbursed amount for the entire transaction set carried in AMT02. Or use the 2/AMT/100 segment with AMT01/KM and the actual distributed amount for the CPN in AMT02
Transaction Status Indicator	80	Either in the 2/LM/040 loop when the code applies to the entire contract cited in the 2/CS/010 loop, or in the 2/LM/120 loop when the code vary with LM01 = code DF, LQ01 = 10 and the actual code carried in LQ02

DLSS DICs: P20, P53, and XEL

DLSS Appendices: MILSPETS B13 - Contractor Shipment
MILSPETS B59 - Multiple Government Bills of Lading
MILSPETS B77 - Multiple DFSPs on Tanker/Barge Shipment from Contractor

DLMS ID: LC07

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 - 3	DICs are not used. To identify the transaction set function use the transaction set number (856) from ST01 and BSN06/U2 - Shipment Performance Notice Supplies
Routing Identifier To	4 - 6	N101/T0. N104 contains the DoDAAC.
Medium of Transmission	7	M&S not used in DLMS
Stock Number	8 - 20	LIN02-3/FS - <i>National Stock Number</i>
Blank	21	
Action	22	LQ01/10 and LQ02/C - <i>Correction</i> or K - <i>Cancellation</i> .
Quantity: Quantity Shipped	23 - 29	SN102
Contract Number (PIIN) Abbreviated or Obligation Authority Number	30 - 36	PRF01 the shipment level iteration (HL03/S) of the 2/HL/010 loop.
CLIN and Sub CLIN	37 - 40 41 - 42	LIN01 in the shipment level iteration (HL03/S) of the 2/HL/010 loop.
or ALIN	37 - 40	
Blank	43 - 44	

Shipment Number or	45 – 51	REF01/SI in the shipment level iteration (HL03 = code S) of the 2/HL/010 loop.
Supplementary Activity Address.	45 – 50	N1 segment in the address iteration of the 2/HL/010 loop with N101/ST - <i>Ship to</i> . N104 contains the DoDAAC or LQ01-2/A9- <i>Supplementary Address</i> If multiple consignees are being reported then do not use the N101/ST and use the SDQ loop to associate multiple destinations and quantities (this would be equivalent to rp45-50= YDFSM with follow-on XEL transactions).
Date Commenced Loading/Pumping	52 – 54	DTM01-2/375 - <i>Delivery Start</i> in the shipment level iteration of the 2/HL/010 loop.
Cargo Number or Bill of Lading Number	55 – 62	REF01-2/XC - <i>Cargo Control Number</i> REF01-2/BL - <i>Bill of Lading Number</i>
P53 record	33 – 40 41 – 48 49 – 56 57 – 64 70 – 78	Use Multiple REF01/BL if multiple bills of lading are associated with a single shipment.
Delivery Order Number	63 – 66	PRF02
Routing Identifier From	67 – 69	N101/FR - N104 contains the DoDAAC.
Final Shipment Indicator	70	REF01-2/FS - <i>Final Sequence Number</i>
Supply Condition Code	71	LQ01-2/83 - <i>Supply Condition Code</i>
Management Indicator	72	LQ01-2//84 - <i>Management Code</i>
Product Shipment Date	73 – 75	DTM01-2/011 - <i>Shipped</i> in the shipment level iteration of the 2/HL/010 loop.
Mode of Shipment	76	TD504 in the shipment level of the 2/HL/010 loop.
Blank	77 – 80	

XEL Record Entries.

Consignee Number 1	24 – 29	SDQ03
2	38 – 43	SDQ05
3	52 – 57	SDQ07
4	66 – 71	SDQ09

SDQ11 - 21 represent an enhancement.

Quantity Shipped 1	30 – 37	SDQ04
2	44 – 51	SDQ06
3	58 – 65	SDQ08
4	72 – 79	SDQ10

SDQ12-22 represent an enhancement

EXPANDED DATA

Transaction time BSN04

Unit of measurement of the purchased unit SN103

Eliminates the need for XEL and P53 transactions by allowing for multiple bills of lading and multiple consignees on single shipment transaction set.

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	DICs are not used. To determine the transaction set function use the transaction set number (867) from ST01, BPT04/01 - <i>Product Transfer</i> and one of the following codes from PTD01: BG - <i>Test and Evaluation</i> = P29 BI - <i>Reutilization & Marketing</i> = P28 BJ - <i>Relocation</i> = P22* BQ - <i>Other</i> = P23,P53* SS - <i>Stock Sale</i> = P21,P53* Distinguish P21/P22/P23 from P53 by more than 1 occurrence of REF01/BL. See separate mapping for P53.
Routing Identifier (to)	4 – 6	N101/TO - <i>TO</i> - N104 contains the DoDAAC.
Media & Status	7	M&S are not used.
NSN	8 – 20	REF01-2/NS - <i>NSN</i>
Blank	21	
Action	22	LQ01-2/GA - <i>Action Code</i>
Quantity	23 – 29	QTY01-2/V3 - <i>Transfer Quantity</i> - Issue
Document Number	30 – 43	REF01-2/TN - <i>Transaction Ref. Number</i>
Suffix (blank for P22)	44	REF01-2/W8 - <i>Suffix</i>

Supplementary Address	45 – 50	N101/BS - <i>Bill and Ship-to</i> N101/BT - <i>Bill-To-Party</i> N101/ST - <i>Ship-to</i> N101/SB - <i>Storage Area</i> N101/TL - <i>Testing Lab</i>
		Use either BS or BT& ST. N104 contains the DoDAAC or CAGE
Signal Code (blank for P22, P28 & P29)	51	Not used
Fund (blank for P22, P28 & P29)	52 – 53	AT05
Blank	54	
GBL Number	55 – 62	REF01-2/BL - <i>GBL</i>
Priority (blank for P22, P28 & P29)	63 – 64	LQ01-2/79 - <i>Priority Code</i>
Blank	65 – 66	
Routing Identifier (from)	67 – 69	N101/FR - <i>From</i> . N104 contains the DoDAAC
Final Shipment Indicator	70	REF01-2/FS - <i>Final Sequence Number</i> - Z placed in REF02
Supply Condition	71	LQ01-2/83 - <i>Supply Condition Code</i>
Management	72	LQ01-2/84 - <i>Management Code</i>
Product Ship Date	73 – 75	DTM01-2/011 - <i>Shipped</i>
Mode of Shipment	76	LQ01-2/39- <i>Transportation Mode or Method Code</i>
Transaction Sequence Number	77 – 80	REF01-2/55 - <i>Sequence Number</i>

Date Packed/Expiration Date Indicator	(60 – 62)	G6201-2/BF – <i>Pack Date</i> ; and 36 – <i>Expiration</i>
---------------------------------------	-----------	--

DLSS cannot distinguish between the dates.

Multi-Use	63 – 64	Intra-Service data to be placed in LM/LQ. Specific codes not yet determined.
-----------	---------	--

Ownership/Purpose (TO)	65	LQ01-2/99 – <i>Purpose Code</i> ; or A1 – <i>Ownership Code</i>
------------------------	----	---

If rp 65 is numeric use DLMS code A1.

If rp 65 is alpha use DLMS code 99.

Supply Condition (TO)	66	LQ01-2/83 - <i>Supply Condition Code</i>
-----------------------	----	--

Routing Identifier (Storage Activity)	67 – 69	N101/LG – <i>Location of Goods</i> ; N104 contains the Department of Defense Routing Identifier Code (RIC)
---------------------------------------	---------	--

Ownership/Purpose (FROM)	70	LQ01-2/99 – <i>Purpose Code</i> ; or A1 – <i>Ownership Code</i>
If rp 70 is numeric use DLMS code A1.		
If rp 70 is alpha use DLMS code 99.		
Supply Condition (FROM)	71	LQ01-2/83 – <i>Supply Condition Code</i>
Management	72	LQ01-2/84 – <i>Management Code</i>
Day of Year	73 – 75	G6201-2/09 – <i>Process Date</i>
Muti-Use	76 – 80	Intra-Service data to be placed in LM/LQ. Specific codes not yet determined.

The following apply to DIC DAS

Blank	60 – 64	
Ownership (TO)	65	LQ01-2/A1 – <i>Ownership Code</i>
Supply Condition	66	LQ01-2/83 – <i>Supply Condition Code</i>
Routing Identifier (Storage Activity)	67 – 69	N101/LG – <i>Location of Goods</i> ; N104 contains the Department of Defense Routing Identifier Code (RIC)
Ownership (FROM)	70	LQ01-2/A1 – <i>Ownership Code</i>
Supply Condition	71	LQ01-2/83 – <i>Supply Condition Code</i>
Management	72	LQ01-2/84 – <i>Management Code</i>
Day of Year	73 – 75	G6201-2/TR – <i>Transfer</i>
Multi-Use	76 – 80	Blank

EXPANDED DATA

Reconciliation for historical or previously submitted data	W1506/W1 – <i>Reconcile Historical Records</i>
--	--

Information contact and communication number	G61 segment
Adjustment reason codes explicitly identified	W1901
Free-text explanation of adjustment reason when required	G69 segment
Contract identification data	CS04-5/83 – <i>Extended Line Item Number (ELIN)</i> ; and C7 – <i>Contract Line Item Number</i>
Additional management codes	LQ01-2/80 – <i>Advice Code</i> , 87 – <i>Subsistence Type of Pack Code</i> , and FC – <i>Type Physical Inventory or Transaction History Code</i>
UIT tracking data to include lot number, unique item identifier, date of warranty expiration, date of manufacture, and CAGE of manufacturer.	N901-2/LT – <i>Lot Number</i> ; or SE – <i>Unique Item identifier</i> , and G6201-2/BK – (date of) <i>Warranty Expiration</i> ; or BL – (date of) <i>Manufacture</i> , and N101/MF – <i>Manufacturer of Goods</i> ; N104 contains the CAGE code

947 INVENTORY ADJUSTMENT

DLSS DICs: P42

DLSS Appendices: MILSPETS B30 – Inventory Adjustment

DLMS ID: LS16

<u>DLSS Field</u>	<u>DLSS RP(s)</u>	<u>DLMS Segment</u>
Document Identifier	1 – 3	DICs are not used. To identify transaction set purpose use transaction set number (947) from ST01 and W1505/NU – <i>Inventory Adjustment</i> and appropriate code from W1901
Routing Identifier To	4 – 6	N101/TO – <i>Message To</i> ; N104 contains the DoDAAC. Use table to convert from RIC to DoDAAC
Medium of Transmission	7	Not used
National Stock Number	8 – 20	W1905-6/FS – <i>National Stock Number</i>
Blank	21	
Action	22	LQ01-2/GA – <i>Action Code</i>
Supply Transaction Quantity	23 – 29	W1902, Credit/Debit Quantity
Document Number	30 – 43	N901-2/TN – <i>Transaction Reference Number</i>
Suffix Code	44	N901-2/W8 – <i>Suffix</i>
Blank	45 – 53	

Type Adjustment 54

W1901, Quantity or Status Adjustment
Reason Code. Use codes as follows:

<u>Type Adj Code</u>	<u>W1901</u>
A	BA
B	AU
C	AI
D	BD
E	06 or 56
F	52
G	07
K	BK
M	BM
N	BN

Blank 55 – 56

Routing Identifier From 67 – 69

N101/FR – *Message From*; N104 contains
the DoDAAC

Gain/Loss Indicator 70

W1916, Inventory Transaction Type
Code/AD - *Inventory Adjustment –
Decrease*, AJ - *Inventory Adjustments*,

Supply Condition 71

LQ01-2/83 – *Supply Condition Code*

Management Indicator 72

LQ01-2/84 – *Management Code*

Inventory Adjustment Day 73 – 75

G6201-2/09 – *Process Date*

Blank 76

Transaction Sequence
Number 77 – 80

N901-2/55 – *Sequence Number*

SECTION 2 -

DLMS FLOW CHARTS

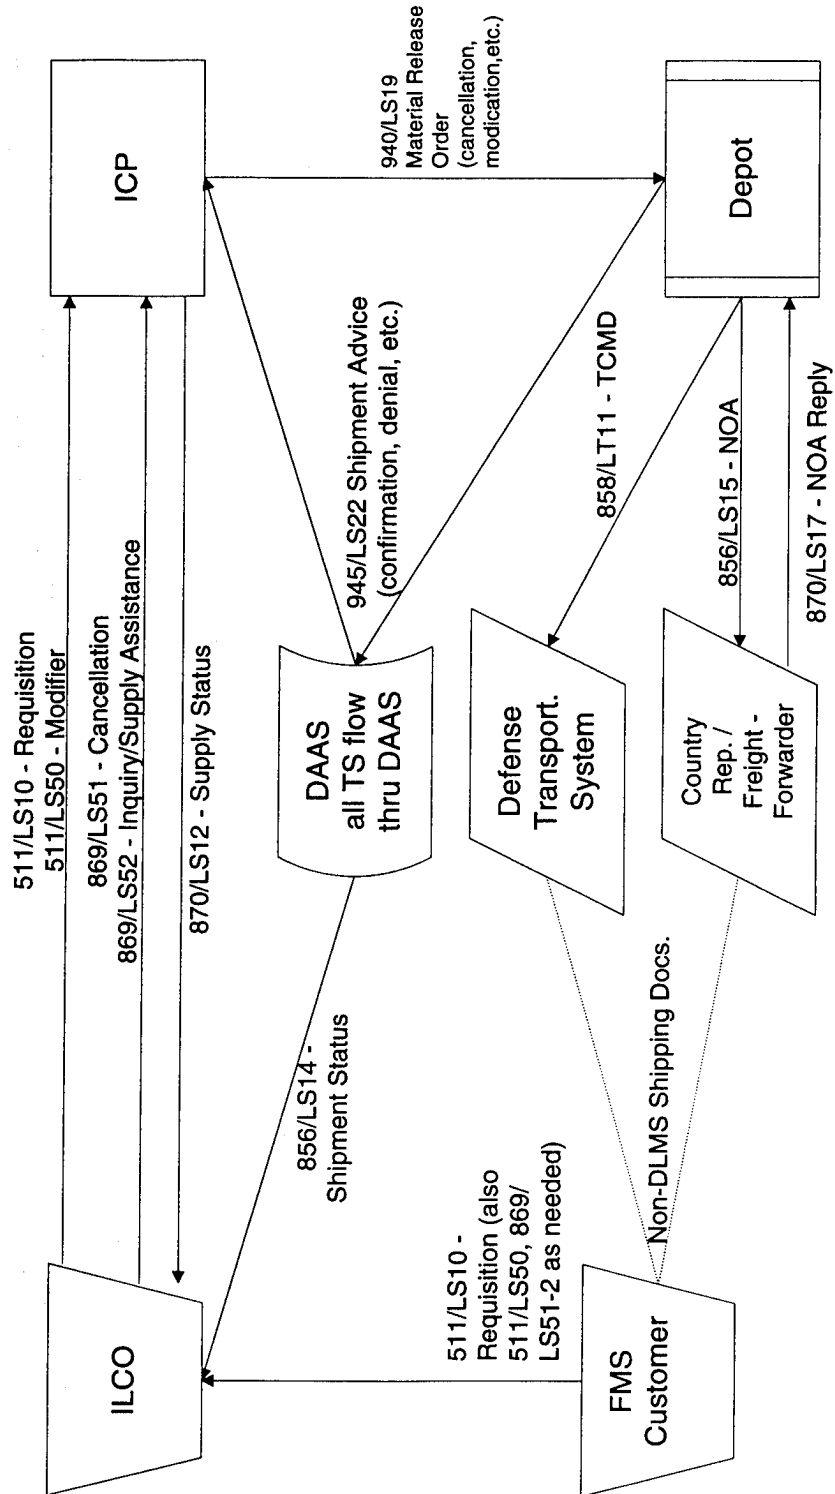

DLMS REQUISITION PROCESSING

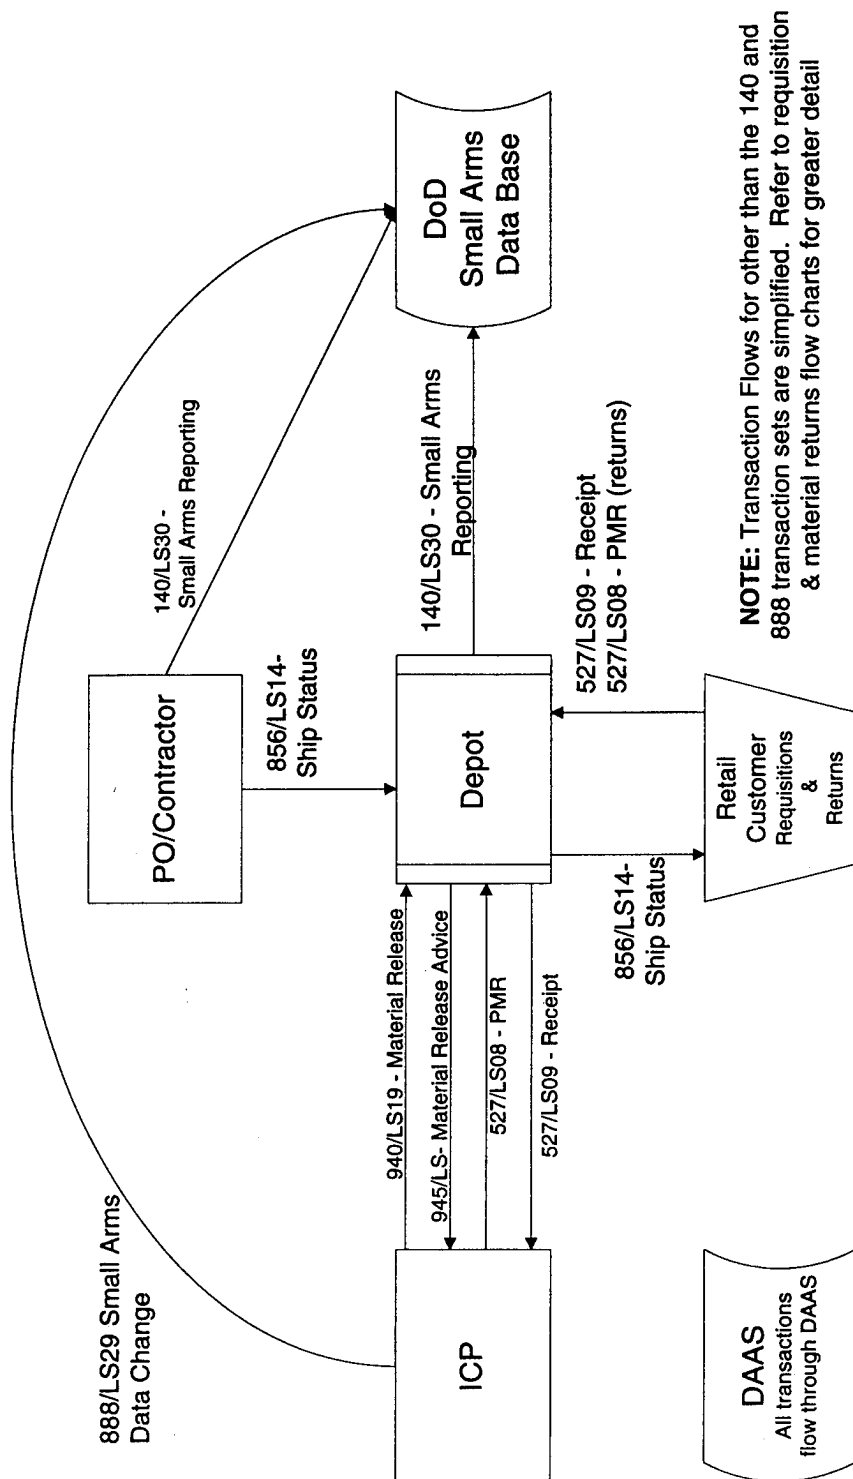

***Note:** All Transaction Sets flow through the DAAS. However, The 945/LS22 is highlighted as the DAAS uses positive confirmation from the depot to generate an 856LS14 to the requisitioner

****Note:** Includes all requisition related transactions: 511/LS10, 511/LS50, 869/LS51, & 869/LS52

DLMS REQUISITION PROCESSING - FMS

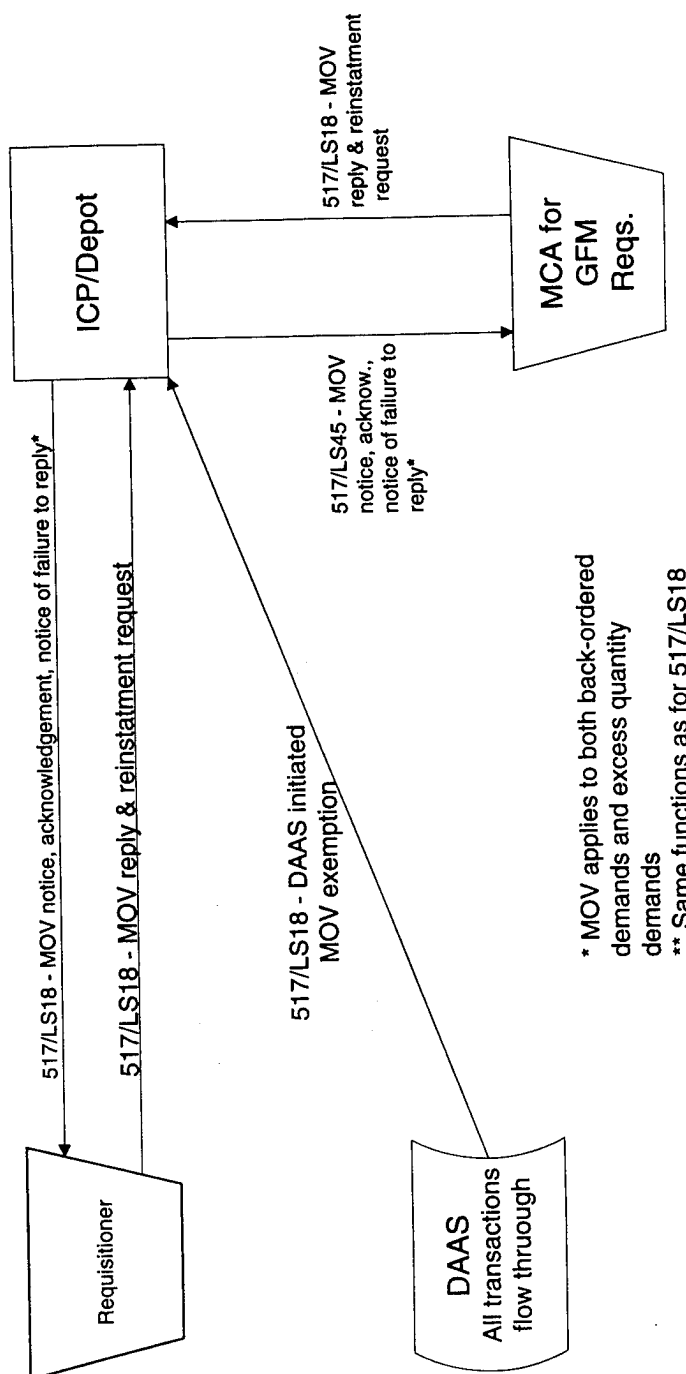

DLMS SMALL ARMS PROCESS

DLMS BILLING PROCESSING

DLMS MATERIAL OBLIGATION VALIDATION (MOV) PROCESSING

* MOV applies to both back-ordered demands and excess quantity demands
** Same functions as for 517/LS18

DLMS MATERIAL RETURNS PROCESSING

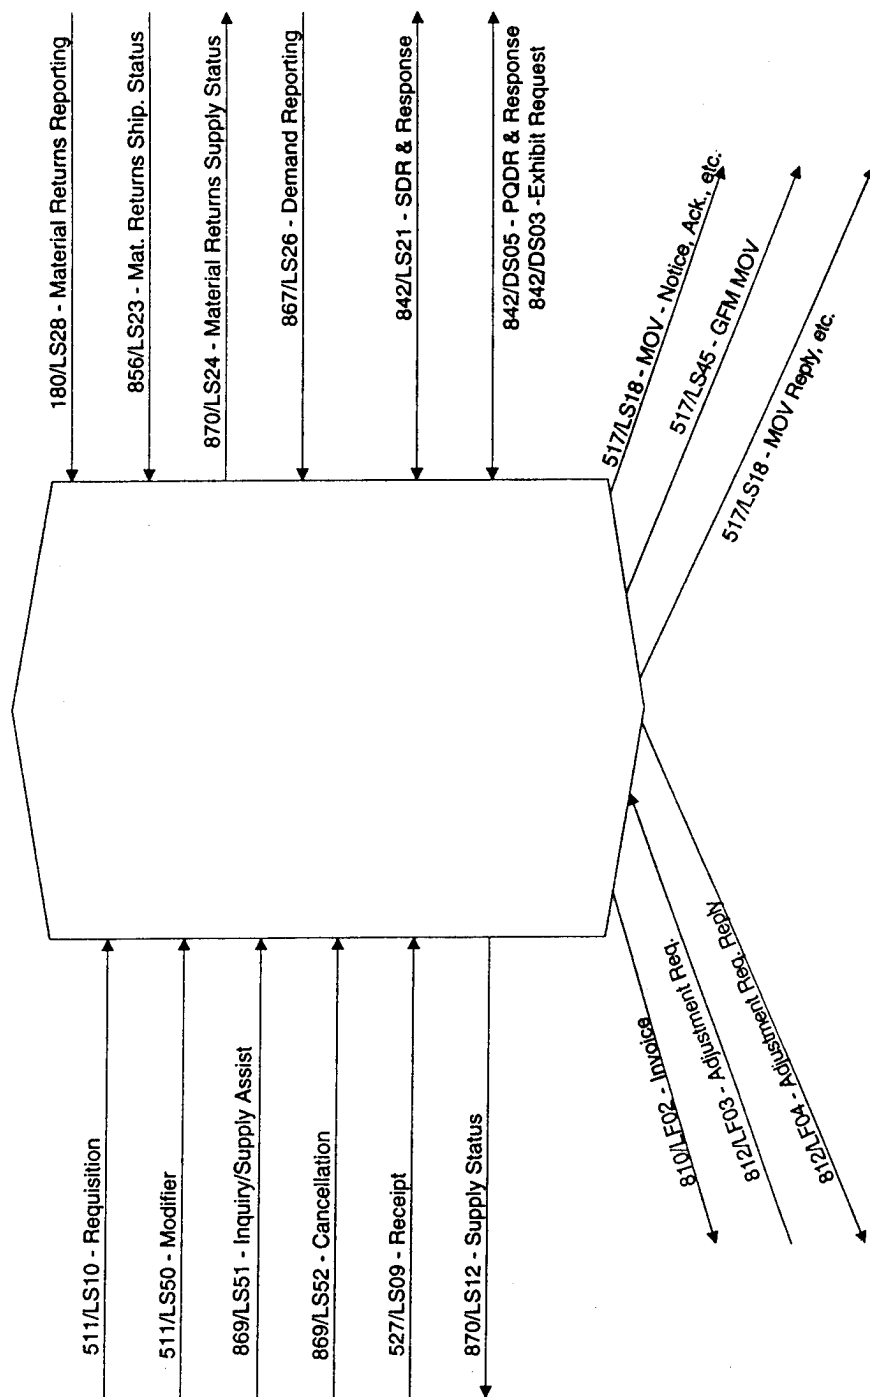

GENERIC RETAIL SUPPLY SYSTEM DLMS TRANSACTION SET EXCHANGES

MATERIAL MANAGEMENT STANDARD SYSTEM

DLMS TRANSACTION SET EXCHANGES-1

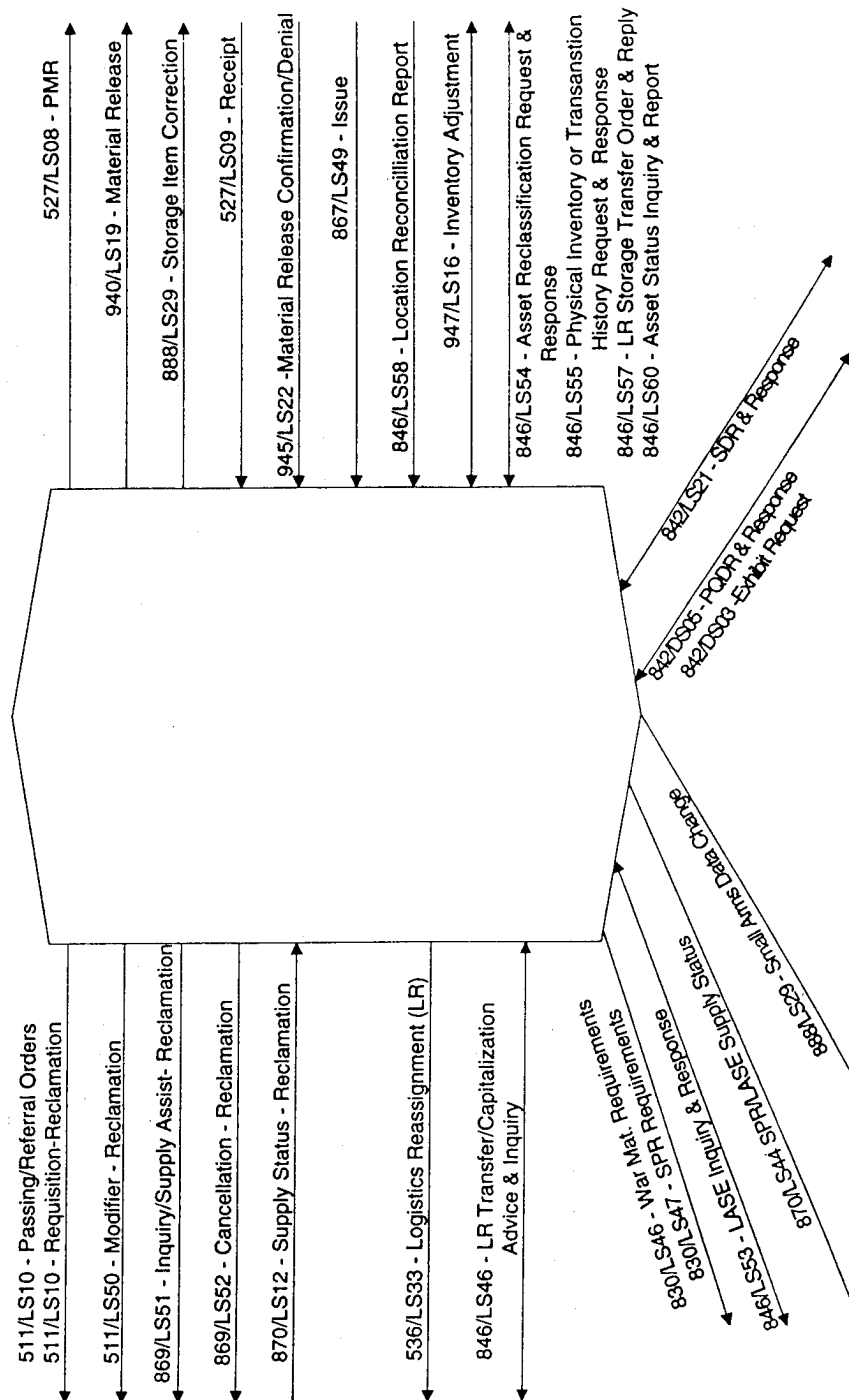

WITH RETAIL TYPE ACTIVITIES

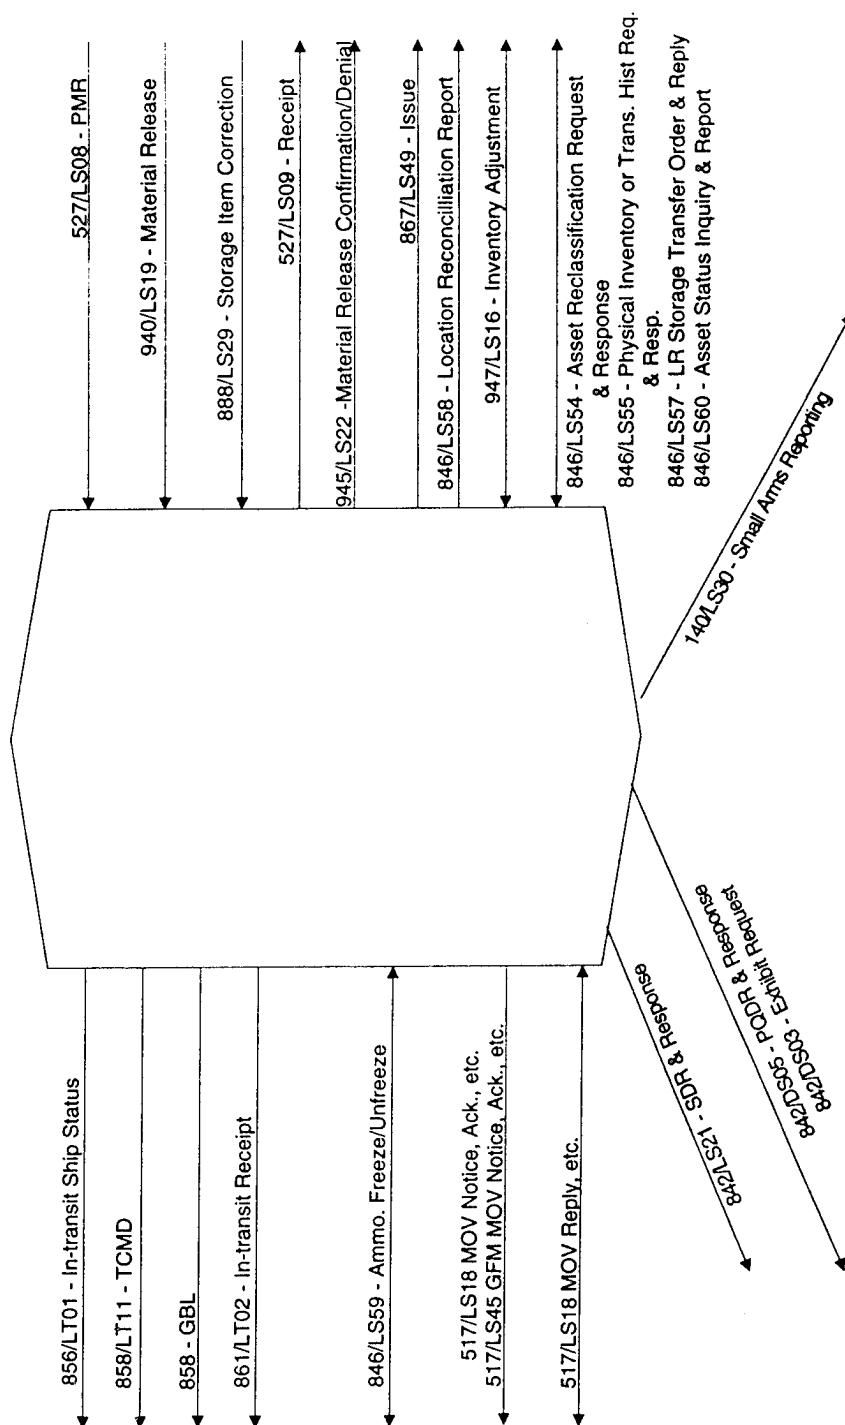

MATERIAL MANAGEMENT STANDARD SYSTEM

DLMS TRANSACTION SET EXCHANGES-2

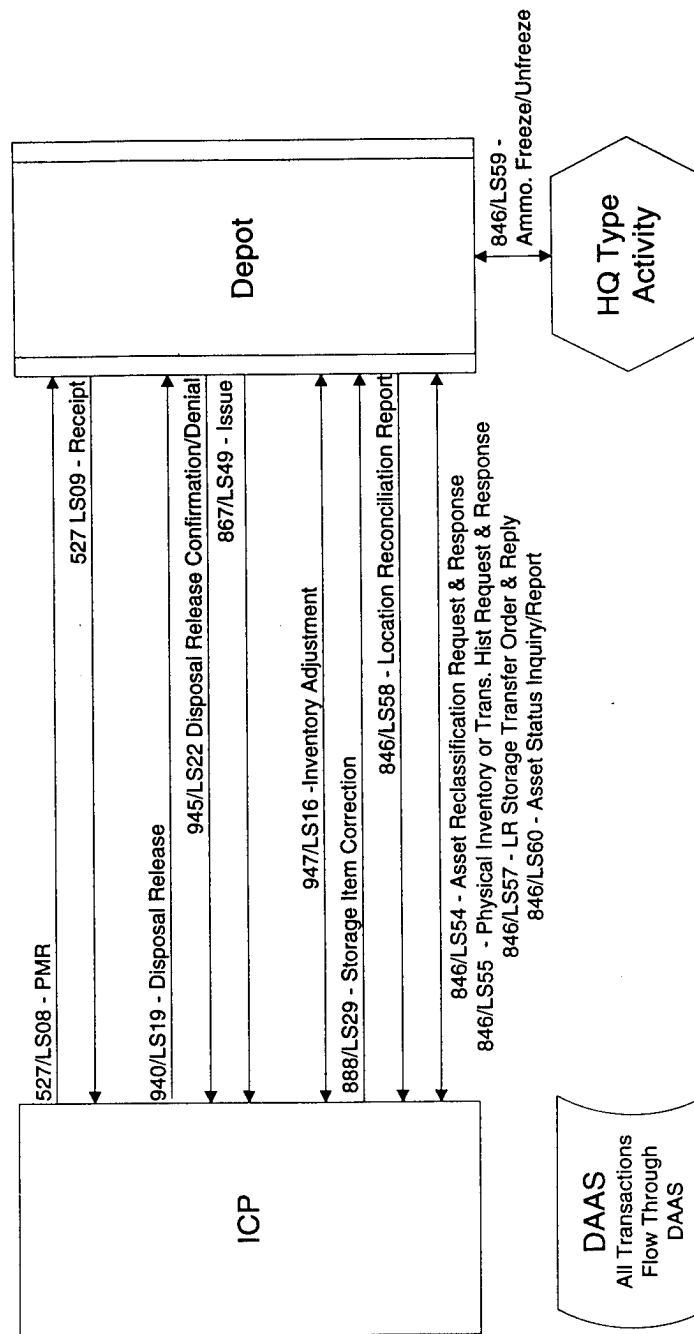

WITH WHOLESALE TYPE ACTIVITIES

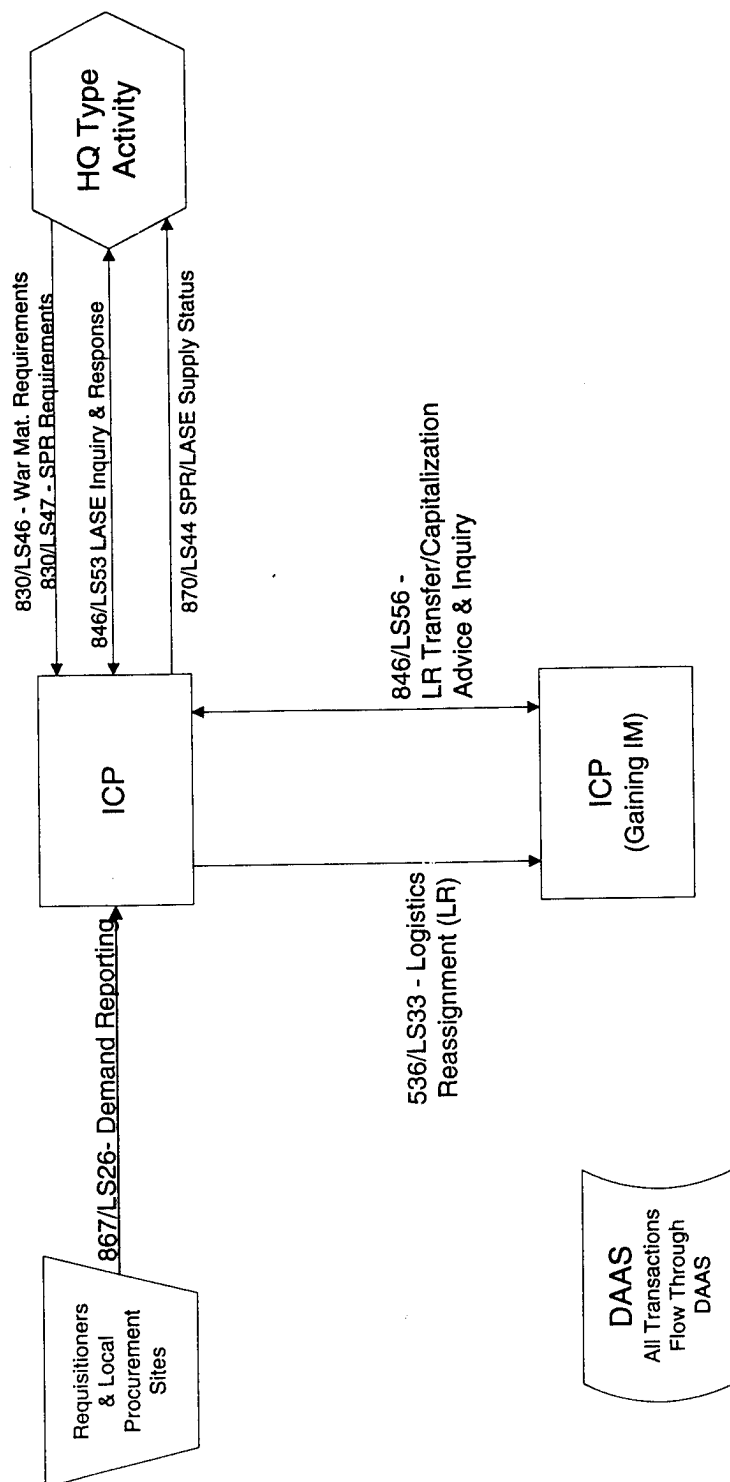

DISTRIBUTION STANDARD SYSTEM DLMS TRANSACTION SET EXCHANGES

DLMS WHOLESALE INVENTORY MANAGEMENT PROCESSING EXCHANGES BETWEEN ICPS AND DISTRIBUTION CENTERS (DEPOTS)

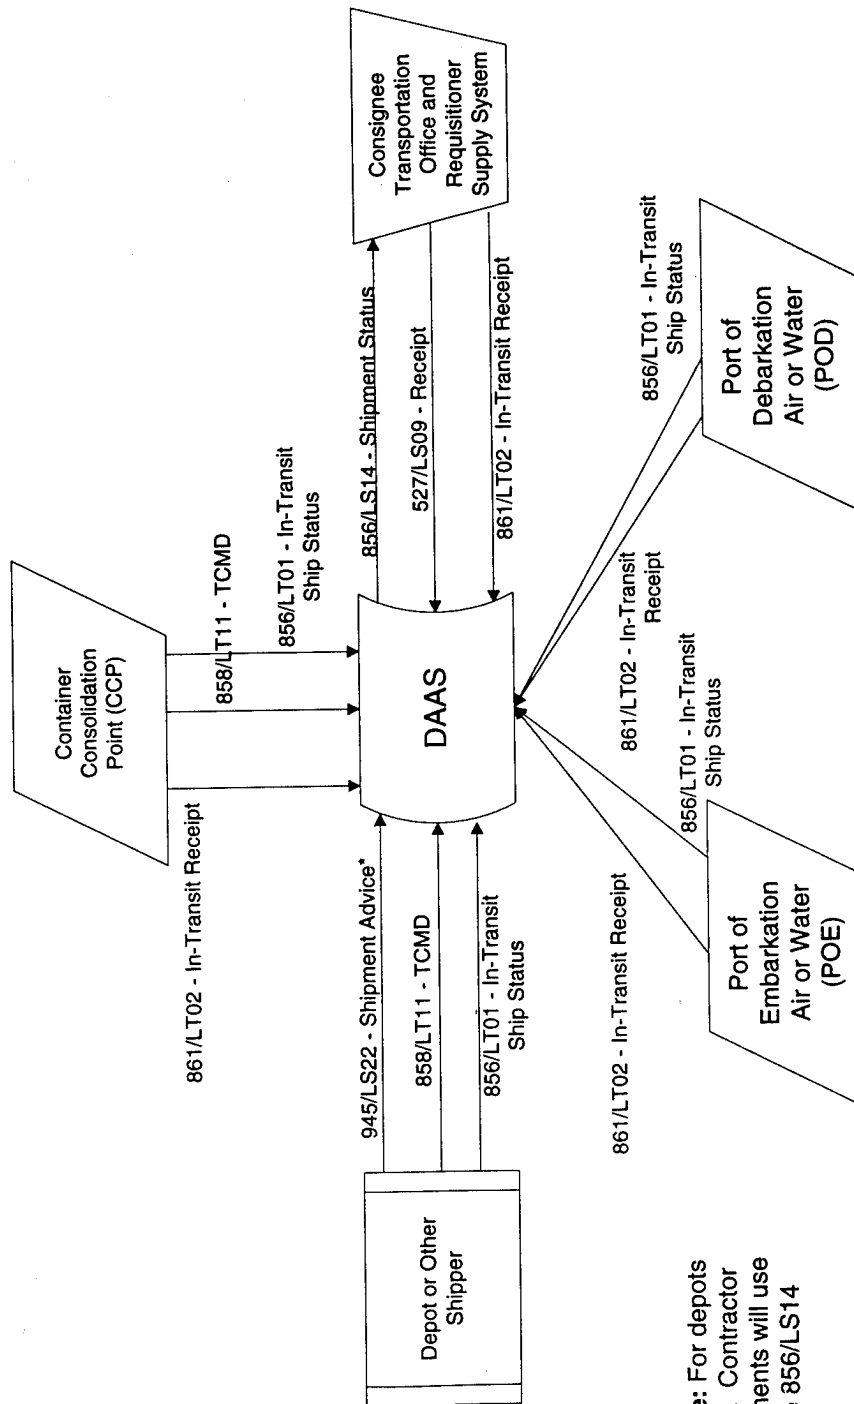

DLMS WHOLESALE INVENTORY MANAGEMENT PROCESSING EXCHANGES BETWEEN ICPS AND OTHER ACTIVITIES

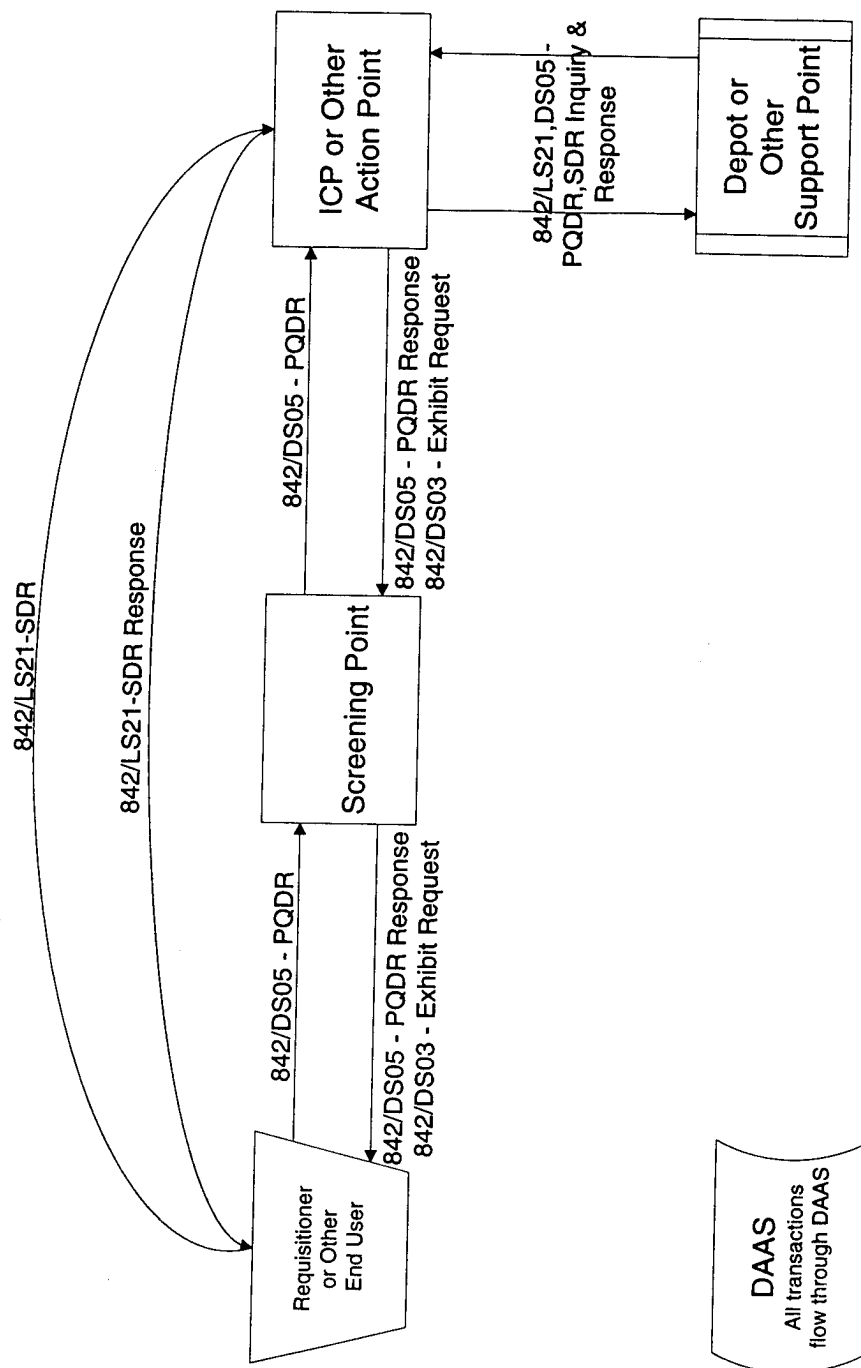

DLMS IN-TRANSIT VISIBILITY PROCESS

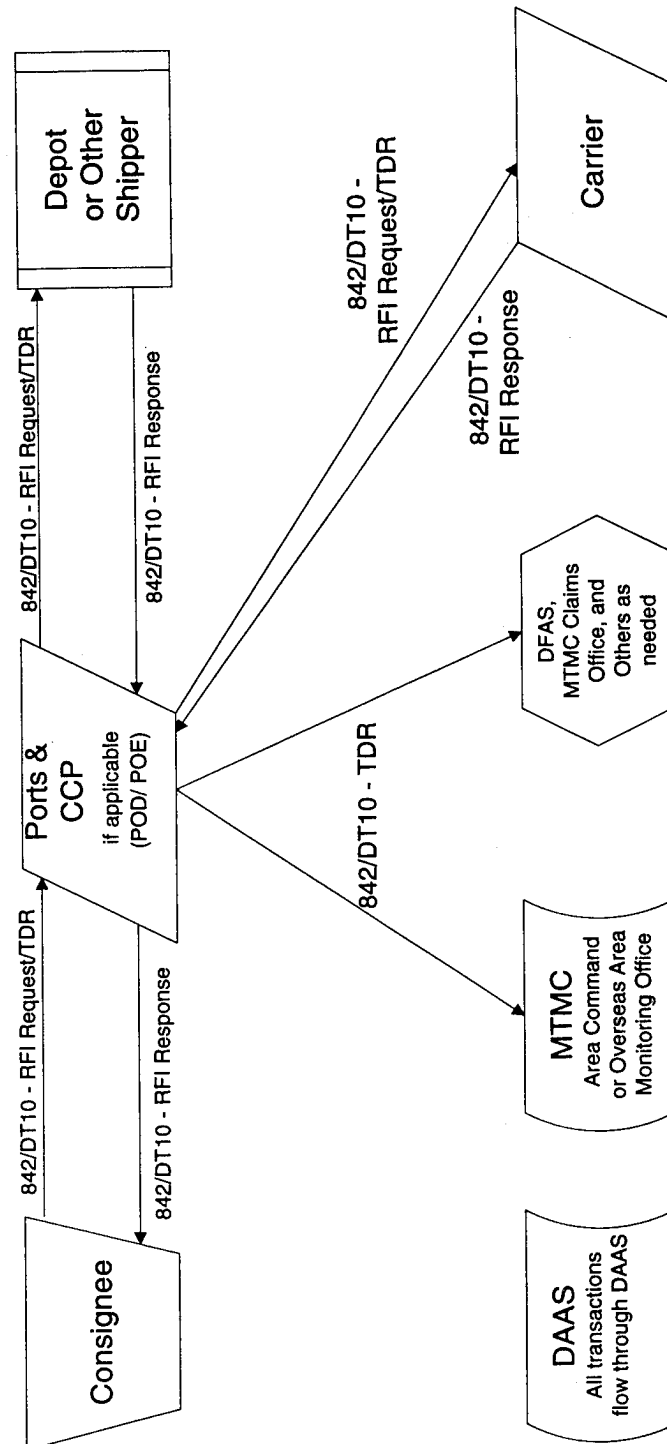

***Note:** For depots only. Contractor shipments will use the 856/LS14

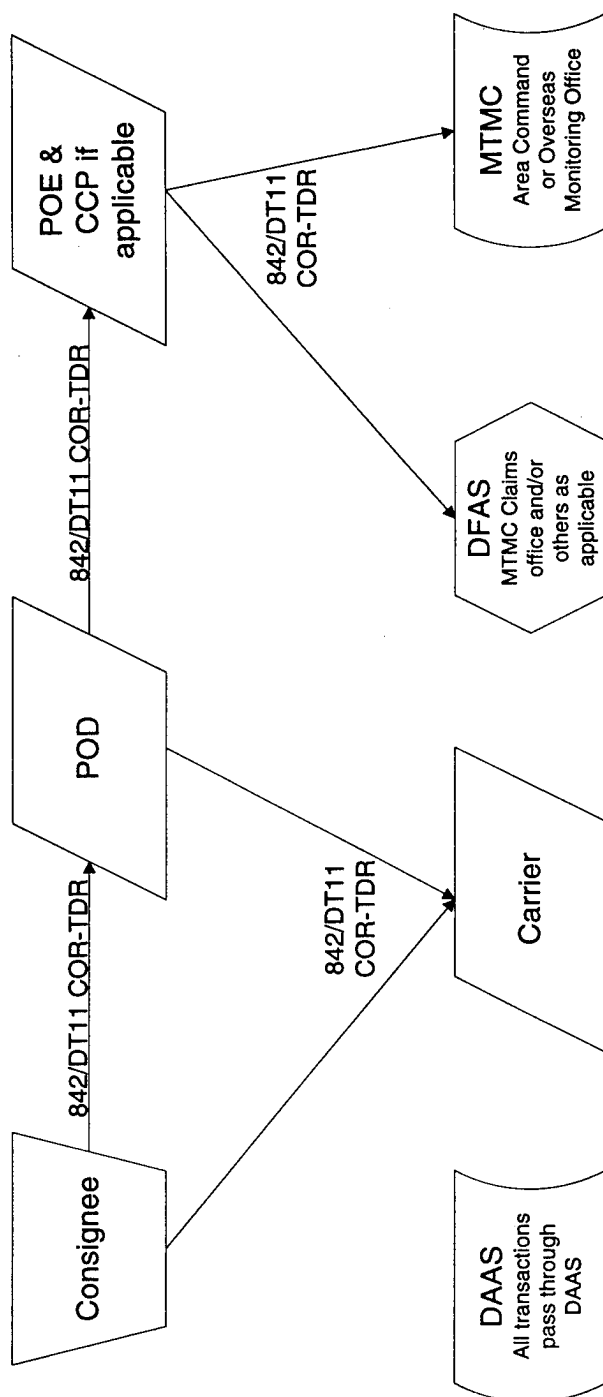

DLMS SDR AND PQDR PROCESSING

TRANSPORTATION DISCREPANCY REPORT/ REQUEST FOR INFORMATION PROCESSES

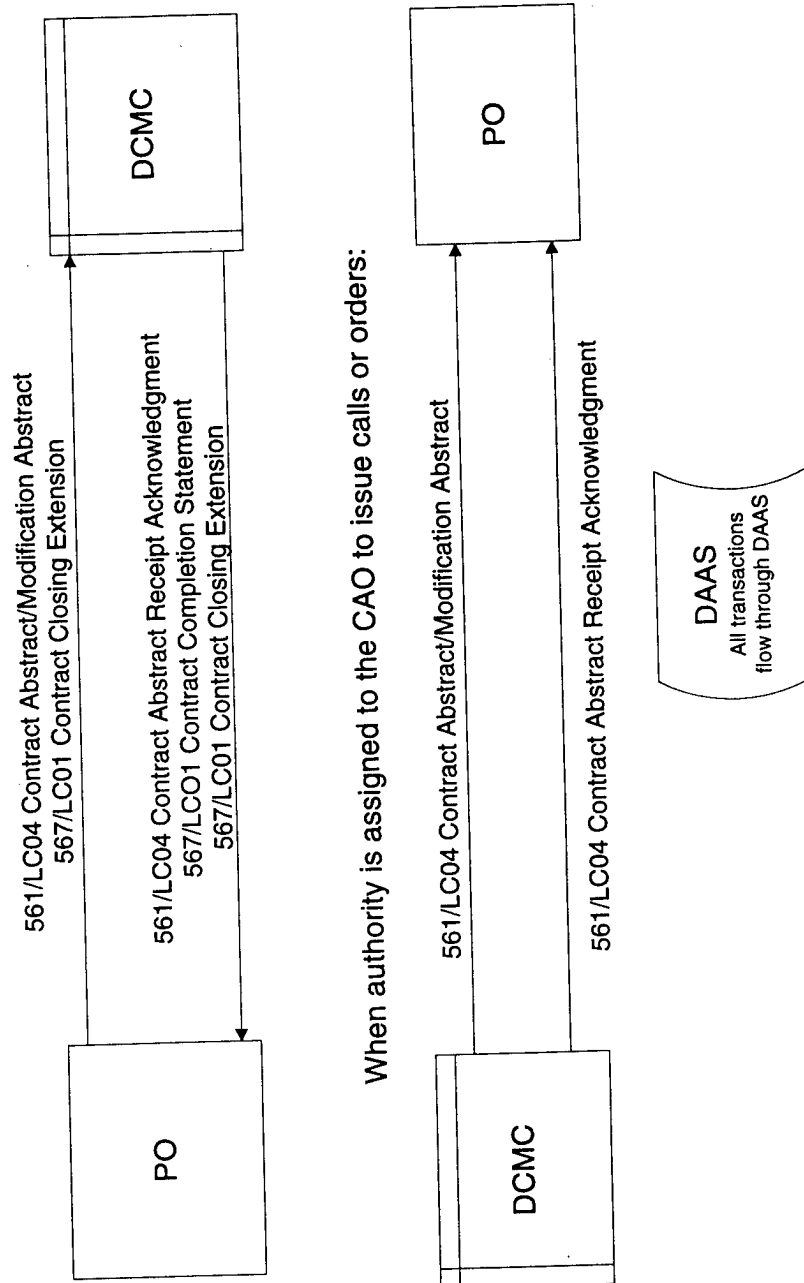

TRANSPORTATION DISCREPANCY REPORT/ CARGO OUTTURN REPORT PROCESS

NOTE: Where POVs are involved an additional application ???/DT14 will be required - This DLMS application is not yet designed.

CONTRACT ABSTRACT/MODIFICATION PROCESS

SHIPMENT PERFORMANCE NOTIFICATION PROCESS

REVISED DELIVERY FORECAST PROCESS

DESTINATION ACCEPTANCE REPORTING PROCESS

CONTRACT PAYMENT AND COLLECTION NOTIFICATION PROCESS
